1 Bias Correction using Higher Order Expansions

In Section 2 we explain the bias of the GMM estimator as a result of the biases of the 2SLS estimators. In this appendix, we attempt eliminating the bias (i) by adopting the second order Taylor type approximation as by Nagar (1959), and Rothenberg (1983); and (ii) by adopting a “long difference” perspective.

For this purpose we first analyze the second order bias of a general minimization estimator b of a single parameter $\beta \in \mathbb{R}$ defined by

$$b = \underset{c \in C}{\operatorname{argmin}} Q_n(c) \quad (1)$$

for some $C \subset \mathbb{R}$. The score for the minimization problem is denoted by $S_n(c) \equiv \partial Q_n(c) / \partial c$. The criterion function is assumed to be of the form $Q_n(c) = g(c)' G(c)^{-1} g(c)$ where $g(c)$ and $G(c)$ are defined in Condition 4. The criterion function depends on primitive functions $\delta(w_i, c)$ and $\psi(w_i, c)$ mapping $\mathbb{R}^k \times \mathbb{R}$ into \mathbb{R}^d for $d \geq 1$, where w_i are i.i.d. observations. We assume that $E[\delta(w_i, \beta)] = 0$. We impose the following additional conditions on w_i, δ , and ψ .

Condition 1 *The random variables w_i are i.i.d.*

Condition 2 *The functions $\delta(w, c)$ and $\psi(w, c)$ are three times differentiable in c for $c \in C$ where $C \subset \mathbb{R}$ is a compact set such that $\beta \in \text{int } C$. Assume that $\delta(w_i, c)$ and $\psi(w_i, c)$ satisfy a Lipschitz condition $\|\delta(w_i, c_1) - \delta(w_i, c_2)\| \leq M_\delta(w_i) |c_1 - c_2|$ for some function $M_\delta(\cdot) : \mathbb{R}^k \rightarrow \mathbb{R}$ and $c_1, c_2 \in C$ with the same statement holding for ψ . The functions $M_\delta(\cdot)$ and $M_\psi(\cdot)$ satisfy $E[M_\delta(w_i)] < \infty$ and $E[M_\psi(w_i)]^2 < \infty$.*

Condition 3 *Let $\delta_j(w_i, c) \equiv \partial^j \delta(w_i, c) / \partial c^j$, $\Psi(w_i, c) \equiv \psi(w_i, c) \psi(w_i, c)'$ and $\Psi_j(w_i, c) \equiv \partial^j \Psi(w_i, c) / \partial c^j$. Then, $\lambda_j(c) \equiv E[\delta_j(w_i, c)]$, and $\Lambda_j(c) \equiv E[\Psi_j(w_i, c)]$ all exist and are finite for $j = 0, \dots, 3$. For simplicity, we use the notation $\lambda_j \equiv \lambda_j(\beta)$, $\Lambda_j \equiv \Lambda_j(\beta)$, $\lambda(c) \equiv \lambda_0(c)$ and $\Lambda(c) \equiv \Lambda_0(c)$.*

Condition 4 *Let $g(c) \equiv \frac{1}{n} \sum_{i=1}^n \delta(w_i, c)$, $g_j(c) \equiv \frac{1}{n} \sum_{i=1}^n \delta_j(w_i, c)$, $G(c) \equiv \frac{1}{n} \sum_{i=1}^n \psi(w_i, c) \psi(w_i, c)'$ and $G_j(c) \equiv \frac{1}{n} \sum_{i=1}^n \Psi_j(w_i, c)$. Then $g(c) \xrightarrow{P} E[\delta(w_i, c)]$, $g_j(c) \rightarrow E[\delta_j(w_i, c)]$, $G(c) \xrightarrow{P} E[\Psi(w_i, c)]$, and $G_j(c) \xrightarrow{P} E[\Psi_j(w_i, c)]$ for all $c \in C$.*

Our asymptotic approximation of the second order bias of b is based on an approximate estimator \tilde{b} such that $b - \tilde{b} = o_p(n^{-1})$. The approximate bias of b is then defined as $E[\tilde{b}] - \beta$ while the original estimator b need not necessarily possess moments of any order. In order to justify our approximation we need to establish that b is \sqrt{n} -consistent and that $S_n(b) = 0$ with probability tending to one. For this purpose we introduce the following additional conditions.

Condition 5 (i) There exists some finite $0 < \mathbf{M} < \infty$ such that the eigenvalues of $E[\Psi(w_i, c)]$ are contained in the compact interval $[\mathbf{M}^{-1}, \mathbf{M}]$ for all $c \in C$; (ii) the vector $E[\delta(w_i, c)] = 0$ if and only if $c = \beta$; (iii) $\lambda_1 \neq 0$.

Condition 6 There exists some $\eta > 0$ such that $E[M_\delta(w_i)^{2+\eta}] < \infty$, $E[M_\psi(w_i)^{2+\eta}] < \infty$, $E[\sup_{c \in C} \|\delta(w_i, c)\|^{2+\eta}] < \infty$, and $E[\sup_{c \in C} \|\psi(w_i, c)\|^{4+\eta}] < \infty$.

Condition 5 is an identification condition that guarantees the existence of a unique interior minimum of the limiting criterion function. Condition 6 corresponds to Assumption B of Andrews (1994) and is used to establish a stochastic equicontinuity property of the criterion function.

Theorem 1 Under conditions 1 - 6, b defined in (1) satisfies $\sqrt{n}(b - \beta) = O_p(1)$ and $S_n(b) = 0$ with probability tending to 1.

Proof. See Section 2. ■

Based on Theorem 1 the first order condition for (1) can be characterized by

$$0 = 2g_1(b)' G(b)^{-1} g(b) - g(b)' G(b)^{-1} G_1(b) G(b)^{-1} g(b) \text{ wp } \rightarrow 1. \quad (2)$$

A second order Taylor expansion of (2) around β leads to a representation of $b - \beta$ up to terms of order $o_p(n^{-1})$:

Definition 1

$$\begin{aligned} \Psi &\equiv 3\lambda_1' \Lambda^{-1} \lambda_2 - 3\lambda_1' \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1, \\ \Upsilon &\equiv 2\lambda_1 \Lambda^{-1} \lambda_1, \quad \frac{1}{\sqrt{n}} \Phi \equiv 2\lambda_1' \Lambda^{-1} g, \\ \frac{1}{\sqrt{n}} \Xi &\equiv 4(g_1 - \lambda_1)' \Lambda^{-1} \lambda_1 - 2\lambda_1' \Lambda^{-1} (G - \Lambda) \Lambda^{-1} \lambda_1 - 4\lambda_1' \Lambda^{-1} \Lambda_1 \Lambda^{-1} g + 2\lambda_2' \Lambda^{-1} g, \\ \frac{1}{n} \Gamma &\equiv 2(g_1 - \lambda_1)' \Lambda^{-1} g - 2\lambda_1' \Lambda^{-1} (G - \Lambda) \Lambda^{-1} g - g' \Lambda^{-1} \Lambda_1 \Lambda^{-1} g. \end{aligned}$$

In Section 3, it is shown that

$$\sqrt{n}(b - \beta) = -\frac{1}{\Upsilon} \Phi + \frac{1}{\sqrt{n}} \left(-\frac{1}{\Upsilon} \Gamma + \frac{1}{\Upsilon^2} \Phi \Xi - \frac{\Psi}{\Upsilon^3} \Phi^2 \right) + o_p\left(\frac{1}{\sqrt{n}}\right). \quad (3)$$

Ignoring the $o_p\left(\frac{1}{\sqrt{n}}\right)$ term in (3), and taking expectations, we obtain the “approximate mean” of $\sqrt{n}(b - \beta)$. We present the second order bias of b in the next Theorem.

Theorem 2 Under Conditions 1-6, the second order bias of b is equal to

$$-\frac{1}{\sqrt{n}} \frac{1}{\Upsilon} E[\Phi] - \frac{1}{n} \frac{1}{\Upsilon} E[\Gamma] + \frac{1}{n} \frac{1}{\Upsilon^2} E[\Phi \Xi] - \frac{\Psi}{n \Upsilon^3} E[\Phi^2]. \quad (4)$$

where

$$E[\Phi] = 0,$$

$$E[\Gamma] = 2 \operatorname{trace} \left(\Lambda^{-1} E \left[\delta_i \frac{\partial \delta'_i}{\partial \beta} \right] \right) - 2 \lambda'_1 \Lambda^{-1} E [\psi_i \psi'_i \Lambda^{-1} \delta_i] - \operatorname{trace} (\Lambda^{-1} \Lambda_1 \Lambda^{-1} E [\delta_i \delta'_i]),$$

and

$$\begin{aligned} E[\Phi \Xi] &= 8 \lambda'_1 \Lambda^{-1} E \left[\delta_i \frac{\partial \delta'_i}{\partial \beta} \right] \Lambda^{-1} \lambda_1 - 4 \lambda'_1 \Lambda^{-1} E [\delta_i \lambda'_1 \Lambda^{-1} \psi_i \psi'_i] \Lambda^{-1} \lambda_1 \\ &\quad - 8 \lambda'_1 \Lambda^{-1} E [\delta_i \delta'_i] \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1 + 4 \lambda'_1 \Lambda^{-1} E [\delta_i \delta'_i] \Lambda^{-1} \lambda_2, \end{aligned}$$

and

$$E[\Phi^2] = 4 \lambda'_1 \Lambda^{-1} E [\delta_i \delta'_i] \Lambda^{-1} \lambda_1,$$

Proof. See Section 3. ■

Remark 1 For the particular case where $\psi_i = \delta_i$, i.e. when b is a CUE, the bias formula (4) exactly coincides with Newey and Smith's (2000).

We now apply these general results to the GMM estimator of the dynamic panel model. The GMM estimator \hat{b}_{GMM} can be understood to be a solution to the minimization problem

$$\min_c \left(\frac{1}{n} \sum_{i=1}^n m_i(c) \right)' V_n^{-1} \left(\frac{1}{n} \sum_{i=1}^n m_i(c) \right)$$

for $c \in C$ where C is some closed interval on the real line containing the true parameter value and

$$m_i(c) = \begin{pmatrix} z_{i1} (y_{i1}^* - c \cdot x_{i1}^*) \\ \vdots \\ z_{iT-1} (y_{iT-1}^* - c \cdot x_{iT-1}^*) \end{pmatrix}, \quad V_n = \frac{1}{n} \sum_{i=1}^n \begin{bmatrix} z_{i1} z'_{i1} & & 0 \\ & \ddots & \\ 0 & & z_{iT-1} z'_{iT-1} \end{bmatrix}.$$

We now characterize the finite sample bias of the GMM estimator \hat{b}_{GMM} of the dynamic panel model using Theorem 2. Recall that we assume

Condition 7 $\varepsilon_{it} \stackrel{i.i.d.}{\sim} \mathcal{N}(0, \sigma^2)$ over i and t .

Condition 8 $y_{i0} | \alpha_i \sim \mathcal{N}\left(\frac{\alpha_i}{1-\beta}, \frac{\sigma^2}{1-\beta^2}\right)$ and $\alpha_i \sim N(0, \sigma_\alpha^2)$.

It can be shown that:

Theorem 3 Under Conditions 7-8 the second order bias of \hat{b}_{GMM} is equal to

$$\frac{B_1 + B_2 + B_3}{n} + o\left(\frac{1}{n}\right), \quad (5)$$

where

$$\begin{aligned} B_1 &\equiv \Upsilon_1^{-1} \sum_{t=1}^{T-1} \operatorname{trace} ((\Gamma_t^{zz})^{-1} \Gamma_{t,t}^{\varepsilon xzz}) \\ B_2 &\equiv -2 \Upsilon_1^{-2} \sum_{t=1}^{T-1} \sum_{s=1}^{T-1} \Gamma_t^{zx'} (\Gamma_t^{zz})^{-1} \Gamma_{t,s}^{\varepsilon xzz} (\Gamma_s^{zz})^{-1} \Gamma_s^{zx} \\ B_3 &\equiv \Upsilon_1^{-2} \sum_{t=1}^{T-1} \sum_{s=1}^{T-1} \Gamma_t^{zx'} (\Gamma_t^{zz})^{-1} B_{3,1}(t, s) (\Gamma_s^{zz})^{-1} \Gamma_s^{zx}. \end{aligned}$$

where $\Gamma_t^{zz} \equiv E[z_{it} z'_{it}]$, $\Gamma_t^{zx} \equiv E[z_{it} x_{it}^*]$, $\Gamma_{t,s}^{\varepsilon xzz} \equiv E[\varepsilon_{it}^* x_{is}^* z_{it} z'_{is}]$, $B_{3,1}(t, s) \equiv E[\varepsilon_{it}^* z_{it} \Gamma_s^{zx'} (\Gamma_s^{zz})^{-1} z_{is} z'_{is}]$ and $\Upsilon_1 \equiv \sum_{t=1}^{T-1} \Gamma_t^{zx'} (\Gamma_t^{zz})^{-1} \Gamma_t^{zx}$.

Proof. See Section 4. ■

Because the summand

$$E \left[E [z_{it} x_{it}^*]' E [z_{it} z_{it}']^{-1} \varepsilon_{it}^* z_{it} \lambda_s' \Lambda_s^{-1} z_{is} z_{is}' E [z_{is} z_{is}']^{-1} E [z_{is} x_{is}^*] \right]$$

in the numerator of B_3 is equal to zero for $s < t$, we may also write

$$\begin{aligned} B_1 &\equiv \Upsilon_1^{-1} \sum_{t=1}^{T-1} \text{trace} \left((\Gamma_t^{zz})^{-1} \Gamma_{t,t}^{\varepsilon xzz} \right) \\ B_2 &\equiv -2\Upsilon_1^{-2} \sum_{t=1}^{T-1} \sum_{s=1}^{T-1} \Gamma_t^{zx'} (\Gamma_t^{zz})^{-1} \Gamma_{t,s}^{\varepsilon xzz} (\Gamma_s^{zz})^{-1} \Gamma_s^{zx} \\ B_3 &\equiv \Upsilon_1^{-2} \sum_{t=1}^{T-1} \sum_{s=t}^{T-1} \Gamma_t^{zx'} (\Gamma_t^{zz})^{-1} B_{3,1}(t, s) (\Gamma_s^{zz})^{-1} \Gamma_s^{zx}. \end{aligned}$$

2 Proof of Theorem 1

By Lemma 2 (a) and Theorem 1(a) of Andrews (1992) and Conditions 1-4 it follows that $\sup_{c \in C} |Q_n(c) - Q(c)| = o_p(1)$, where $Q(c) \equiv \lambda(c)' \Lambda(c)^{-1} \lambda(c)$. Let $B(\beta, \epsilon)$ be an open interval of length ϵ centered at β . By Condition 5 it follows that $\inf_{c \notin B(\beta, \epsilon)} Q(c) > Q(\beta) = 0$ for all $\epsilon > 0$. It then follows from standard arguments that $b - \beta = o_p(1)$. It therefore follows that $\Pr(S_n(b) \neq 0) \leq \Pr(b \in \partial C) = 1 - \Pr(b \in \text{int } C) \leq 1 - \Pr(b \in B(\beta, \epsilon)) \rightarrow 0$ for any $\epsilon > 0$ where ∂C denotes the boundary of C .

Using similar arguments as in Pakes and Pollard (1989) we write

$$\begin{aligned} |Q(b)| &= \left| \lambda(b)' \Lambda(b)^{-1} \lambda(b) \right| \\ &\leq \left| g(b)' G(b)^{-1} g(b) - \lambda(b)' \Lambda(b)^{-1} \lambda(b) - g(\beta)' G(b)^{-1} g(\beta) \right| \\ &\quad + \left| g(b)' G(b)^{-1} g(b) \right| + \left| g(\beta)' G(b)^{-1} g(\beta) \right| \\ &\leq \left| g(b)' G(b)^{-1} g(b) - \lambda(b)' G(b)^{-1} \lambda(b) - g(\beta)' G(b)^{-1} g(\beta) \right| \\ &\quad + \left| \lambda(b)' G(b)^{-1} \lambda(b) - \lambda(b)' \Lambda(b)^{-1} \lambda(b) \right| \\ &\quad + \left| g(b)' G(b)^{-1} g(b) \right| + \left| g(\beta)' G(b)^{-1} g(\beta) \right|, \end{aligned}$$

where $\left| g(b)' G(b)^{-1} g(b) \right| \leq \left| g(\beta)' G(\beta)^{-1} g(\beta) \right| = O_p(n^{-1})$ by the definition of b and Condition 6. We have $G(b)^{-1} = O_p(1)$ by consistency of b and the uniform law of large numbers, from which we obtain $\left| g(\beta)' G(b)^{-1} g(\beta) \right| = O_p(n^{-1})$. We also have

$$\begin{aligned} &g(b)' G(b)^{-1} g(b) - \lambda(b)' G(b)^{-1} \lambda(b) - g(\beta)' G(b)^{-1} g(\beta) \\ &= g(b)' G(b)^{-1} (g(b) - g(\beta) - \lambda(b)) + (g(b) - g(\beta) - \lambda(b))' G(b)^{-1} \lambda(b) \\ &\quad + 2g(\beta)' G(b)^{-1} \lambda(b) + (g(b) - g(\beta) - \lambda(b))' G(b)^{-1} g(\beta). \end{aligned}$$

Therefore, we obtain

$$\begin{aligned} |Q(b)| &\leq \left| \lambda(b)' G(b)^{-1} \lambda(b) - \lambda(b)' \Lambda(b)^{-1} \lambda(b) \right| \\ &\quad + \left| g(b)' G(b)^{-1} (g(b) - g(\beta) - \lambda(b)) \right| \\ &\quad + \left| (g(b) - g(\beta) - \lambda(b))' G(b)^{-1} \lambda(b) \right| \\ &\quad + 2 \left| g(\beta)' G(b)^{-1} \lambda(b) \right| + \left| (g(b) - g(\beta) - \lambda(b))' G(b)^{-1} g(\beta) \right| \\ &\quad + O_p(n^{-1}). \end{aligned}$$

The terms $G(\beta)^{-1}$, and $\Lambda(b)^{-1}$ are $O_p(1)$ by consistency of b and the uniform law of large numbers. Also, the terms $g(b)$ and $\lambda(b)$ are $o_p(1)$ by consistency of b and the uniform law of large numbers. From Theorems 1 and 2 in Andrews (1994) and Conditions 1-6 it follows that $g(b) - \lambda(b) - g(\beta) = o_p(n^{-1/2})$. From a standard CLT and consistency of b it follows that $(g(b) - g(\beta) - \lambda(b))' G(b)^{-1} g(\beta) = o_p(n^{-1})$, and $g(\beta)' G(b)^{-1} = O_p(n^{-1/2})$. These results show that

$$\begin{aligned}|Q(b)| &\leq \|G(b)^{-1} - \Lambda(b)^{-1}\| \|\lambda(b)\|^2 + O_p(n^{-1/2}) \|\lambda(b)\| + o_p(n^{-1}) \\&= o_p(1) \|\lambda(b)\|^2 + O_p(n^{-1/2}) \|\lambda(b)\| + o_p(n^{-1}).\end{aligned}$$

Because $|Q(b)| = |\lambda(b)' \Lambda(b)^{-1} \lambda(b)| \geq \frac{1}{M} \|\lambda(b)\|^2$, we conclude that

$$\left(\frac{1}{M} - o_p(1)\right) \|\lambda(b)\|^2 - O_p(n^{-1/2}) \|\lambda(b)\| \leq o_p(n^{-1})$$

or

$$\|\lambda(b)\| = O_p(n^{-1/2}),$$

which implies that $b - \beta = O_p(n^{-1/2})$.

3 Proof of Theorem 2

Note that we have

$$\begin{aligned}g_1(b) &= g_1 + \frac{1}{\sqrt{n}} g_2 \cdot \sqrt{n}(b - \beta) + \frac{1}{2n} g_3 \cdot (\sqrt{n}(b - \beta))^2 + o_p\left(\frac{1}{n}\right), \\g(b) &= g + \frac{1}{\sqrt{n}} g_1 \cdot \sqrt{n}(b - \beta) + \frac{1}{2n} g_2 \cdot (\sqrt{n}(b - \beta))^2 + o_p\left(\frac{1}{n}\right),\end{aligned}$$

and

$$\begin{aligned}G(b)^{-1} &= G^{-1} - \frac{1}{\sqrt{n}} G^{-1} G_1 G^{-1} \cdot \sqrt{n}(b - \beta) \\&\quad + \frac{1}{2n} \left(2G^{-1} G_1 G^{-1} G_1 G^{-1} - G^{-1} G_2 G^{-1}\right) (\sqrt{n}(b - \beta))^2 + o_p\left(\frac{1}{n}\right), \\G_1(b) &= G_1 + \frac{1}{\sqrt{n}} G_2 \cdot \sqrt{n}(b - \beta) + \frac{1}{2n} G_3 \cdot (\sqrt{n}(b - \beta))^2 + o_p\left(\frac{1}{n}\right)\end{aligned}$$

where g, g_j, G, G_j and $\sqrt{n}(b - \beta)$ are $O_p(1)$ by Conditions 3 and 4 and Lemma 1. Therefore, we have

$$g_1(b)' G(b)^{-1} g(b) = g_1' G^{-1} g + \frac{1}{\sqrt{n}} h_1 \cdot \sqrt{n}(b - \beta) + \frac{1}{n} h_2 \cdot (\sqrt{n}(b - \beta))^2 + o_p\left(\frac{1}{n}\right),$$

and

$$\begin{aligned}g(b)' G(b)^{-1} G_1(b) G(b)^{-1} g(b) &= g' G^{-1} G_1 G^{-1} g + \frac{1}{\sqrt{n}} h_3 \cdot \sqrt{n}(b - \beta) \\&\quad + \frac{1}{n} h_4 \cdot (\sqrt{n}(b - \beta))^2 + o_p\left(\frac{1}{n}\right),\end{aligned}$$

where

$$\begin{aligned}
h_1 &= g'_2 G^{-1} g - g'_1 G^{-1} G_1 G^{-1} g + g'_1 G^{-1} g_1, \\
h_2 &= \frac{1}{2} g'_3 G^{-1} g + \frac{1}{2} g'_1 (2G^{-1} G_1 G^{-1} G_1 G^{-1} - G^{-1} G_2 G^{-1}) g + \frac{1}{2} g'_1 G^{-1} g_2 \\
&\quad - g'_2 G^{-1} G_1 G^{-1} g - g'_1 G^{-1} G_1 G^{-1} g_1 + g'_2 G^{-1} g_1 \\
&= \frac{1}{2} g'_3 G^{-1} g + g'_1 G^{-1} G_1 G^{-1} G_1 G^{-1} g - \frac{1}{2} g'_1 G^{-1} G_2 G^{-1} g + \frac{3}{2} g'_1 G^{-1} g_2 \\
&\quad - g'_2 G^{-1} G_1 G^{-1} g - g'_1 G^{-1} G_1 G^{-1} g_1,
\end{aligned}$$

and

$$\begin{aligned}
h_3 &= g'_1 G^{-1} G_1 G^{-1} g - g' G^{-1} G_1 G^{-1} G_1 G^{-1} g + g' G^{-1} G_2 G^{-1} g \\
&\quad - g' G^{-1} G_1 G^{-1} G_1 G^{-1} g + g' G^{-1} G_1 G^{-1} g_1 \\
&= 2g'_1 G^{-1} G_1 G^{-1} g - 2g' G^{-1} G_1 G^{-1} G_1 G^{-1} g + g' G^{-1} G_2 G^{-1} g, \\
h_4 &= \frac{1}{2} g'_2 G^{-1} G_1 G^{-1} g + \frac{1}{2} g' (2G^{-1} G_1 G^{-1} G_1 G^{-1} - G^{-1} G_2 G^{-1}) G_1 G^{-1} g \\
&\quad + \frac{1}{2} g' G^{-1} G_3 G^{-1} g + \frac{1}{2} g' G^{-1} G_1 (2G^{-1} G_1 G^{-1} G_1 G^{-1} - G^{-1} G_2 G^{-1}) g \\
&\quad + \frac{1}{2} g' G^{-1} G_1 G^{-1} g_2 \\
&\quad - g'_1 G^{-1} G_1 G^{-1} G_1 G^{-1} g + g'_1 G^{-1} G_2 G^{-1} g - g'_1 G^{-1} G_1 G^{-1} G_1 G^{-1} g \\
&\quad + g'_1 G^{-1} G_1 G^{-1} g_1 - g' G^{-1} G_1 G^{-1} G_2 G^{-1} g \\
&\quad + g' G^{-1} G_1 G^{-1} G_1 G^{-1} G_1 G^{-1} g - g' G^{-1} G_1 G^{-1} G_1 G^{-1} g_1 - g' G^{-1} G_2 G^{-1} G_1 G^{-1} g \\
&\quad + g' G^{-1} G_2 G^{-1} g_1 - g' G^{-1} G_1 G^{-1} G_1 G^{-1} g_1
\end{aligned}$$

We may therefore rewrite the score $S_n(b)$ as

$$\begin{aligned}
S_n(b) &= (2g'_1 G^{-1} g - g' G^{-1} G_1 G^{-1} g) + \frac{1}{\sqrt{n}} (2h_1 - h_3) \sqrt{n}(b - \beta) \\
&\quad + \frac{1}{n} (2h_2 - h_4) (\sqrt{n}(b - \beta))^2 + o_p\left(\frac{1}{n}\right). \tag{6}
\end{aligned}$$

Next note that $P(|S_n(b)| > \epsilon) = P(|S_n(b)| > \epsilon/n^{-1})$ for any $\epsilon > 0$ because of Lemma 1. Thus $S_n(b) = o_p(n^{-1})$ and we can subsume this error into the $o_p(n^{-1})$ term of 6. Using these arguments and Lemmas 1, 2, and 3 below, we may rewrite the first order condition (6) as

$$0 = \frac{1}{\sqrt{n}} \Phi + \frac{1}{n} \Gamma + \frac{1}{\sqrt{n}} \left(\Upsilon + \frac{1}{\sqrt{n}} \Xi \right) \sqrt{n}(b - \beta) + \frac{1}{n} \Psi (\sqrt{n}(b - \beta))^2 + o_p\left(\frac{1}{n}\right)$$

or

$$0 = \Phi + \frac{1}{\sqrt{n}} \Gamma + \left(\Upsilon + \frac{1}{\sqrt{n}} \Xi \right) \sqrt{n}(b - \beta) + \frac{1}{\sqrt{n}} \Psi (\sqrt{n}(b - \beta))^2 + o_p\left(\frac{1}{\sqrt{n}}\right),$$

based on which we obtain (3). Noting that

$$E[\Phi] = 2\sqrt{n}\lambda'_1 \Lambda^{-1} E[g] = 0, \tag{7}$$

$$\begin{aligned}
E[\Gamma] &= 2nE[(g_1 - \lambda_1)' \Lambda^{-1} g] - 2n\lambda'_1 \Lambda^{-1} E[(G - \Lambda) \Lambda^{-1} g] - nE[g' \Lambda^{-1} \Lambda_1 \Lambda^{-1} g] \\
&= 2 \text{trace} \left(\Lambda^{-1} E \left[\delta_i \frac{\partial \delta'_i}{\partial \beta} \right] \right) - 2\lambda'_1 \Lambda^{-1} E[\psi_i \psi'_i \Lambda^{-1} \delta_i] - \text{trace}(\Lambda^{-1} \Lambda_1 \Lambda^{-1} E[\delta_i \delta'_i]), \tag{8}
\end{aligned}$$

$$\begin{aligned}
E[\Phi \Xi] &= 8n\lambda'_1\Lambda^{-1}E[g(g_1 - \lambda_1)']\Lambda^{-1}\lambda_1 - 4nE[\lambda'_1\Lambda^{-1}g\lambda'_1\Lambda^{-1}(G - \Lambda)\Lambda^{-1}\lambda_1] \\
&\quad - 8n\lambda'_1\Lambda^{-1}E[gg']\Lambda^{-1}\Lambda_1\Lambda^{-1}\lambda_1 + 4n\lambda'_1\Lambda^{-1}E[gg']\Lambda^{-1}\lambda_2 \\
&= 8\lambda'_1\Lambda^{-1}E\left[\delta_i \frac{\partial \delta'_i}{\partial \beta}\right]\Lambda^{-1}\lambda_1 - 4\lambda'_1\Lambda^{-1}E[\delta_i\lambda'_1\Lambda^{-1}\psi_i\psi'_i]\Lambda^{-1}\lambda_1 \\
&\quad - 8\lambda'_1\Lambda^{-1}E[\delta_i\delta'_i]\Lambda^{-1}\Lambda_1\Lambda^{-1}\lambda_1 + 4\lambda'_1\Lambda^{-1}E[\delta_i\delta'_i]\Lambda^{-1}\lambda_2,
\end{aligned} \tag{9}$$

and

$$E[\Phi^2] = 4\lambda'_1\Lambda^{-1}E[\delta_i\delta'_i]\Lambda^{-1}\lambda_1, \tag{10}$$

we obtain the desired conclusion.

Lemma 1 *Under Conditions 3 and 4*

$$\begin{aligned}
h_2 &= \frac{3}{2}\lambda'_1\Lambda^{-1}\lambda_2 - \lambda'_1\Lambda^{-1}\Lambda_1\Lambda^{-1}\lambda_1 + o_p(1), \\
h_4 &= \lambda'_1\Lambda^{-1}\Lambda_1\Lambda^{-1}\lambda_1 + o_p(1).
\end{aligned}$$

Proof. Follows from $\text{plim } g = 0$. ■

Lemma 2 *Under Conditions 3 and 4*

$$2h_1 - h_3 = \Upsilon + \frac{1}{\sqrt{n}}\Xi + o_p\left(\frac{1}{\sqrt{n}}\right).$$

Proof. Because

$$\begin{aligned}
g'_2 G^{-1} g &= \lambda'_2 \Lambda^{-1} g + o_p\left(\frac{1}{\sqrt{n}}\right), \\
g'_1 G^{-1} G_1 G^{-1} g &= \lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} g + o_p\left(\frac{1}{\sqrt{n}}\right),
\end{aligned}$$

and

$$\begin{aligned}
g'_1 G^{-1} g_1 &= (\lambda_1 + (g_1 - \lambda_1))' \left(\Lambda^{-1} - \Lambda^{-1}(G - \Lambda)\Lambda^{-1} + o_p\left(\frac{1}{\sqrt{n}}\right) \right) (\lambda_1 + (g_1 - \lambda_1)) \\
&= \lambda_1 \Lambda^{-1} \lambda_1 + 2(g_1 - \lambda_1)' \Lambda^{-1} \lambda_1 - \lambda_1 \Lambda^{-1} (G - \Lambda) \Lambda^{-1} \lambda_1 + o_p\left(\frac{1}{\sqrt{n}}\right),
\end{aligned} \tag{11}$$

we obtain

$$\begin{aligned}
h_1 &= \lambda'_2 \Lambda^{-1} g - \lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} g \\
&\quad + \lambda_1 \Lambda^{-1} \lambda_1 + 2(g_1 - \lambda_1)' \Lambda^{-1} \lambda_1 - \lambda_1 \Lambda^{-1} (G - \Lambda) \Lambda^{-1} \lambda_1 + o_p\left(\frac{1}{\sqrt{n}}\right).
\end{aligned}$$

Similarly, we obtain

$$h_3 = 2\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} g + o_p\left(\frac{1}{\sqrt{n}}\right).$$

The conclusion follows. ■

Lemma 3 *Under Conditions 3 and 4*

$$2g'_1 G^{-1} g - g'_1 G^{-1} G_1 G^{-1} g = \frac{1}{\sqrt{n}}\Phi + \frac{1}{n}\Gamma + o_p\left(\frac{1}{n}\right).$$

Proof. We have

$$\begin{aligned} g'_1 G^{-1} g &= (\lambda_1 + (g_1 - \lambda_1))' \left(\Lambda^{-1} - \Lambda^{-1} (G - \Lambda) \Lambda^{-1} + o_p \left(\frac{1}{\sqrt{n}} \right) \right) g \\ &= \lambda'_1 \Lambda^{-1} g + (g_1 - \lambda_1)' \Lambda^{-1} g - \lambda'_1 \Lambda^{-1} (G - \Lambda) \Lambda^{-1} g + o_p \left(\frac{1}{n} \right) \end{aligned}$$

and

$$g' G^{-1} G_1 G^{-1} g = g' \Lambda^{-1} \Lambda_1 \Lambda^{-1} g + o_p \left(\frac{1}{n} \right).$$

from which the conclusion follows. ■

4 Proof of Theorem 3

The second order bias is computed using Theorem 3. Because the “weight matrix” here does not involve the parameter of interest, we have $\Lambda_1 = 0$. Also, because the moment restriction is linear in the parameter of interest, we have $\lambda_2 = 0$. It therefore follows that

$$\Psi = 3\lambda'_1 \Lambda^{-1} \lambda_2 - 3\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1 = 0,$$

and the second order bias is equal to

$$-\frac{1}{n} \frac{1}{\Upsilon} E[\Gamma] + \frac{1}{n} \frac{1}{\Upsilon^2} E[\Phi \Xi],$$

where

$$\begin{aligned} E[\Gamma] &= 2 \text{trace} \left(\Lambda^{-1} E \left[\delta_i \frac{\partial \delta'_i}{\partial \beta} \right] \right) - 2\lambda'_1 \Lambda^{-1} E[\psi_i \psi'_i \Lambda^{-1} \delta_i] \\ E[\Phi \Xi] &= 8\lambda'_1 \Lambda^{-1} E \left[\delta_i \frac{\partial \delta'_i}{\partial \beta} \right] \Lambda^{-1} \lambda_1 - 4\lambda'_1 \Lambda^{-1} E[\delta_i \lambda'_1 \Lambda^{-1} \psi_i \psi'_i] \Lambda^{-1} \lambda_1 \end{aligned}$$

Furthermore, because $E[z_{it} z'_{it} E[z_{it} z'_{it}]^{-1} z_{it} \varepsilon_{it}^*] = 0$ under conditional symmetry of ε_{it}^* ,

$$\lambda'_1 \Lambda^{-1} E[\psi_i \psi'_i \Lambda^{-1} \delta_i] = - \sum_{t=1}^{T-1} E[z_{it} x_{it}^*]' E[z_{it} z'_{it}]^{-1} E[z_{it} z'_{it} E[z_{it} z'_{it}]^{-1} z_{it} \varepsilon_{it}^*] = 0$$

and therefore, we have further simplification

$$\begin{aligned} E[\Gamma] &= 2 \text{trace} \left(\Lambda^{-1} E \left[\delta_i \frac{\partial \delta'_i}{\partial \beta} \right] \right) \\ E[\Phi \Xi] &= 8\lambda'_1 \Lambda^{-1} E \left[\delta_i \frac{\partial \delta'_i}{\partial \beta} \right] \Lambda^{-1} \lambda_1 - 4\lambda'_1 \Lambda^{-1} E[\delta_i \lambda'_1 \Lambda^{-1} \psi_i \psi'_i] \Lambda^{-1} \lambda_1 \end{aligned}$$

the second term should be equal to zero. Because

$$\begin{aligned} \lambda_1 \Lambda^{-1} \lambda_1 &= \sum_{t=1}^{T-1} E[z_{it} x_{it}^*]' E[z_{it} z'_{it}]^{-1} E[z_{it} x_{it}^*], \\ \text{trace} \left(\Lambda^{-1} E \left[\delta_i \frac{\partial \delta'_i}{\partial \beta} \right] \right) &= - \sum_{t=1}^{T-1} \text{trace} \left(E[z_{it} z'_{it}]^{-1} E[\varepsilon_{it}^* x_{it}^* z_{it} z'_{it}] \right), \\ \lambda'_1 \Lambda^{-1} E \left[\delta_i \frac{\partial \delta'_i}{\partial \beta} \right] \Lambda^{-1} \lambda_1 &= - \sum_{t=1}^{T-1} \sum_{s=1}^{T-1} E[z_{it} x_{it}^*]' E[z_{it} z'_{it}]^{-1} E[\varepsilon_{it}^* x_{is}^* z_{it} z'_{is}] E[z_{is} z'_{is}]^{-1} E[z_{is} x_{is}^*], \end{aligned}$$

and

$$\begin{aligned} & \lambda'_1 \Lambda^{-1} E \left[\delta_i \lambda'_1 \Lambda^{-1} \psi_i \psi'_i \right] \Lambda^{-1} \lambda_1 \\ &= - \sum_{t=1}^{T-1} \sum_{s=1}^{T-1} E [z_{it} x_{it}^*]' E [z_{it} z_{it}']^{-1} E \left[\varepsilon_{it}^* z_{it} E [z_{is} x_{is}^*]' E [z_{is} z_{is}']^{-1} z_{is} z_{is}' \right] E [z_{is} z_{is}']^{-1} E [z_{is} x_{is}^*], \end{aligned}$$

we now obtain

$$\begin{aligned} \Upsilon &= 2\lambda_1 \Lambda^{-1} \lambda_1 \\ &= 2 \sum_{t=1}^{T-1} E [z_{it} x_{it}^*]' E [z_{it} z_{it}']^{-1} E [z_{it} x_{it}^*] \\ &= 2\Upsilon_1, \end{aligned}$$

$$\begin{aligned} E[\Gamma] &= 2 \text{trace} \left(\Lambda^{-1} E \left[\delta_i \frac{\partial \delta'_i}{\partial \beta} \right] \right) \\ &= -2 \sum_{t=1}^{T-1} \text{trace} \left(E [z_{it} z_{it}']^{-1} E [\varepsilon_{it}^* x_{it}^* z_{it} z_{it}'] \right) \\ &= -2 \sum_{t=1}^{T-1} \text{trace} \left((\Gamma_t^{zz})^{-1} \Gamma_{t,t}^{\varepsilon x z z} \right), \end{aligned}$$

$$\begin{aligned} E[\Phi \Xi] &= 8\lambda'_1 \Lambda^{-1} E \left[\delta_i \frac{\partial \delta'_i}{\partial \beta} \right] \Lambda^{-1} \lambda_1 - 4\lambda'_1 \Lambda^{-1} E \left[\delta_i \lambda'_1 \Lambda^{-1} \psi_i \psi'_i \right] \Lambda^{-1} \lambda_1 \\ &= -8 \sum_{t=1}^{T-1} \sum_{s=1}^{T-1} E [z_{it} x_{it}^*]' E [z_{it} z_{it}']^{-1} E [\varepsilon_{it}^* x_{is}^* z_{it} z_{is}'] E [z_{is} z_{is}']^{-1} E [z_{is} x_{is}^*] \\ &\quad + 4 \sum_{t=1}^{T-1} \sum_{s=1}^{T-1} E [z_{it} x_{it}^*]' E [z_{it} z_{it}']^{-1} E \left[\varepsilon_{it}^* z_{it} E [z_{is} x_{is}^*]' E [z_{is} z_{is}']^{-1} z_{is} z_{is}' \right] E [z_{is} z_{is}']^{-1} E [z_{is} x_{is}^*] \\ &= -8 \sum_{t=1}^{T-1} \sum_{s=1}^{T-1} \Gamma_t^{zx'} (\Gamma_t^{zz})^{-1} \Gamma_{t,s}^{\varepsilon x z z} (\Gamma_s^{zz})^{-1} \Gamma_s^{zx} \\ &\quad + 4 \sum_{t=1}^{T-1} \sum_{s=1}^{T-1} \Gamma_t^{zx'} (\Gamma_t^{zz})^{-1} B_{3,1}(t, s) (\Gamma_s^{zz})^{-1} \Gamma_s^{zx} \end{aligned}$$

from which we obtain the desired conclusion.

Higher Order Bias and MSE of GMM: Supplementary Appendix for “Long Difference Instrumental Variables Estimation for Dynamic Panel Models with Fixed Effects”

Jinyong Hahn

Jerry Hausman

Guido Kuersteiner

April, 2002

1 Higher Order Expansion of GMM

Consider a general minimization estimator b of a single parameter $\beta \in \mathbb{R}$ defined by

$$b = \underset{c \in C}{\operatorname{argmin}} g_n(c)' G_n(\tilde{\beta})^{-1} g_n(c) \quad (1)$$

where

$$g_n(c) \equiv \frac{1}{n} \sum_{i=1}^n \psi(z_i, c)$$

and

$$G_n(\tilde{\beta}) \equiv \frac{1}{n} \sum_{i=1}^n \psi(z_i, \tilde{\beta}) \psi(z_i, \tilde{\beta})'$$

Here, $\tilde{\beta}$ is an initial \sqrt{n} -consistent estimator for β such that

$$\sqrt{n}(\tilde{\beta} - \beta) = L_n + \frac{1}{\sqrt{n}}Q_n + \frac{1}{n}S_n + o_p\left(\frac{1}{n}\right)$$

where

$$L_n \equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n f_i$$

f_i is i.i.d. mean zero, and $Q_n = O_p(1)$, $S_n = O_p(1)$.

Definition 1

$$\psi_j(z_i, c) \equiv \partial^j \psi(z_i, c) / \partial c^j$$

$$\lambda_j(c) \equiv E[\psi_j(z_i, c)]$$

$$\Psi(z_i, c) \equiv \psi(z_i, c) \psi(z_i, c)'$$

$$\Psi_j(z_i, c) \equiv \partial^j \Psi(z_i, c) / \partial c^j$$

$$\Lambda_j(c) \equiv E[\Psi_j(z_i, c)]$$

For simplicity, we use the notation

$$\begin{aligned}\lambda_j &\equiv \lambda_j(\beta) \\ \Lambda_j &\equiv \Lambda_j(\beta) \\ \lambda(c) &\equiv \lambda_0(c) \\ \Lambda(c) &\equiv \Lambda_0(c)\end{aligned}$$

Definition 2

$$\begin{aligned}g_n(c) &\equiv \frac{1}{n} \sum_{i=1}^n \psi(z_i, c) \\ g_{j,n}(c) &\equiv \frac{1}{n} \sum_{i=1}^n \psi_j(z_i, c) \\ G_n(c) &\equiv \frac{1}{n} \sum_{i=1}^n \Psi(z_i, c) = \frac{1}{n} \sum_{i=1}^n \psi(z_i, c) \psi(z_i, c)' \\ G_{j,n}(c) &\equiv \frac{1}{n} \sum_{i=1}^n \Psi_j(z_i, c)\end{aligned}$$

Definition 3

$$\begin{aligned}w_n &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (\psi(z_i, \beta) - \lambda) = \sqrt{n} g_n(\beta) \\ w_{1,n} &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (\psi_1(z_i, \beta) - \lambda_1) \\ w_{2,n} &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (\psi_2(z_i, \beta) - \lambda_2) \\ w_{3,n} &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (\psi_3(z_i, \beta) - \lambda_3) \\ w_{4,n} &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (\psi_4(z_i, \beta) - \lambda_4) \\ W_n &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (\Psi(z_i, \beta) - \Lambda) \\ W_{1,n} &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (\Psi_1(z_i, \beta) - \Lambda_1) \\ W_{2,n} &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (\Psi_2(z_i, \beta) - \Lambda_2) \\ W_{3,n} &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (\Psi_3(z_i, \beta) - \Lambda_3)\end{aligned}$$

Definition 4

$$\begin{aligned}\tilde{\Lambda}_1 &\equiv W_n + \Lambda_1 L_n \\ \tilde{\Lambda}_2 &\equiv 2\Lambda_1 Q_n + 2W_{1,n} L_n + \Lambda_2 L_n^2 \\ \tilde{\Lambda}_3 &\equiv 6\Lambda_1 S_n + 6W_{1,n} Q_n + 3W_{2,n} L_n^2 + 6\Lambda_2 L_n Q_n + \Lambda_3 L_n^3\end{aligned}$$

Lemma 1

$$G_n(\tilde{\beta}) = \Lambda + \frac{1}{\sqrt{n}}\tilde{\Lambda}_1 + \frac{1}{2n}\tilde{\Lambda}_2 + \frac{1}{6n\sqrt{n}}\tilde{\Lambda}_3 + o_p\left(\frac{1}{n\sqrt{n}}\right).$$

Proof. Write

$$\begin{aligned} G_n(\tilde{\beta}) &= \frac{1}{n} \sum_{i=1}^n \Psi(z_i, \tilde{\beta}) \\ &= \frac{1}{n} \sum_{i=1}^n \Psi(z_i, \beta) \\ &\quad + \frac{1}{\sqrt{n}} \left(\frac{1}{n} \sum_{i=1}^n \Psi_1(z_i, \beta) \right) \cdot \sqrt{n} (\tilde{\beta} - \beta) \\ &\quad + \frac{1}{2n} \left(\frac{1}{n} \sum_{i=1}^n \Psi_2(z_i, \beta) \right) \cdot (\sqrt{n} (\tilde{\beta} - \beta))^2 \\ &\quad + \frac{1}{6n\sqrt{n}} \left(\frac{1}{n} \sum_{i=1}^n \Psi_3(z_i, \beta) \right) \cdot (\sqrt{n} (\tilde{\beta} - \beta))^3 + o_p\left(\frac{1}{n\sqrt{n}}\right) \end{aligned}$$

Note that

$$\frac{1}{n} \sum_{i=1}^n \psi(z_i, \beta) \psi(z_i, \beta)' = \Lambda + \frac{1}{\sqrt{n}} W_n,$$

$$\begin{aligned} &\frac{1}{\sqrt{n}} \left(\frac{1}{n} \sum_{i=1}^n \Psi_1(z_i, \beta) \right) \cdot \sqrt{n} (\tilde{\beta} - \beta) \\ &= \frac{1}{\sqrt{n}} \left(\Lambda_1 + \frac{1}{\sqrt{n}} W_{1,n} \right) \cdot \left(L_n + \frac{1}{\sqrt{n}} Q_n + \frac{1}{n} S_n + o_p\left(\frac{1}{n}\right) \right) \\ &= \frac{1}{\sqrt{n}} \Lambda_1 L_n \\ &\quad + \frac{1}{n} (\Lambda_1 Q_n + W_{1,n} L_n) \\ &\quad + \frac{1}{n\sqrt{n}} (\Lambda_1 S_n + W_{1,n} Q_n) + o_p\left(\frac{1}{n\sqrt{n}}\right), \\ &\frac{1}{2n} \left(\frac{1}{n} \sum_{i=1}^n \Psi_2(z_i, \beta) \right) \cdot (\sqrt{n} (\tilde{\beta} - \beta))^2 \\ &= \frac{1}{2n} \left(\Lambda_2 + \frac{1}{\sqrt{n}} W_{2,n} \right) \cdot \left(L_n + \frac{1}{\sqrt{n}} Q_n + \frac{1}{n} S_n + o_p\left(\frac{1}{n}\right) \right)^2 \\ &= \frac{1}{2n} \Lambda_2 L_n^2 + \frac{1}{2n\sqrt{n}} (W_{2,n} L_n^2 + 2\Lambda_2 L_n Q_n) + o_p\left(\frac{1}{n\sqrt{n}}\right), \end{aligned}$$

and

$$\begin{aligned} &\frac{1}{6n\sqrt{n}} \left(\frac{1}{n} \sum_{i=1}^n \Psi_3(z_i, \beta) \right) \cdot (\sqrt{n} (\tilde{\beta} - \beta))^3 \\ &= \frac{1}{6n\sqrt{n}} \left(\Lambda_3 + \frac{1}{\sqrt{n}} W_{3,n} \right) \left(L_n + \frac{1}{\sqrt{n}} Q_n + \frac{1}{n} S_n + o_p\left(\frac{1}{n}\right) \right)^3 \\ &= \frac{1}{6n\sqrt{n}} \Lambda_3 L_n^3 + o_p\left(\frac{1}{n\sqrt{n}}\right). \end{aligned}$$

It follows that

$$\begin{aligned}
G_n(\tilde{\beta}) &= \Lambda + \frac{1}{\sqrt{n}}W_n + \frac{1}{\sqrt{n}}\Lambda_1L_n \\
&\quad + \frac{1}{n}(\Lambda_1Q_n + W_{1,n}L_n) + \frac{1}{2n}\Lambda_2L_n^2 \\
&\quad + \frac{1}{n\sqrt{n}}(\Lambda_1S_n + W_{1,n}Q_n) + \frac{1}{2n\sqrt{n}}(W_{2,n}L_n^2 + 2\Lambda_2L_nQ_n) + \frac{1}{6n\sqrt{n}}\Lambda_3L_n^3 \\
&\quad + o_p\left(\frac{1}{n\sqrt{n}}\right) \\
&= \Lambda + \frac{1}{\sqrt{n}}\tilde{\Lambda}_1 + \frac{1}{2n}\tilde{\Lambda}_2 + \frac{1}{6n\sqrt{n}}\tilde{\Lambda}_3 + o_p\left(\frac{1}{n\sqrt{n}}\right).
\end{aligned}$$

■

Definition 5

$$\begin{aligned}
H_1 &\equiv -\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1} \\
H_2 &\equiv 2\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1} - \Lambda^{-1}\tilde{\Lambda}_2\Lambda^{-1} \\
H_3 &\equiv -6\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1} + 3\Lambda^{-1}\tilde{\Lambda}_2\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1} + 3\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1}\tilde{\Lambda}_2\Lambda^{-1} - \Lambda^{-1}\tilde{\Lambda}_3\Lambda^{-1}
\end{aligned}$$

Lemma 2

$$G_n(\tilde{\beta})^{-1} = \Lambda^{-1} + \frac{1}{\sqrt{n}}H_1 + \frac{1}{2n}H_2 + \frac{1}{6n\sqrt{n}}H_3 + o_p\left(\frac{1}{n\sqrt{n}}\right)$$

Proof. Using Lemma 1, we obtain

$$\begin{aligned}
G_n(\tilde{\beta})^{-1} &= \Lambda^{-1} - \frac{1}{\sqrt{n}}\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1} \\
&\quad + \frac{1}{2n}(2\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1} - \Lambda^{-1}\tilde{\Lambda}_2\Lambda^{-1}) \\
&\quad - \frac{1}{6n\sqrt{n}}(6\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1} - 3\Lambda^{-1}\tilde{\Lambda}_2\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1} - 3\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1}\tilde{\Lambda}_2\Lambda^{-1} + \Lambda^{-1}\tilde{\Lambda}_3\Lambda^{-1}) \\
&\quad + o_p\left(\frac{1}{n\sqrt{n}}\right)
\end{aligned}$$

■

Lemma 3

$$H_1 = H_{1,0} + L_n \cdot H_{1,1}$$

where

$$\begin{aligned}
H_{1,0} &\equiv -\Lambda^{-1}W_n\Lambda^{-1} \\
H_{1,1} &\equiv -\Lambda^{-1}\Lambda_1\Lambda^{-1}
\end{aligned}$$

Proof.

$$\begin{aligned}
H_1 &= -\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1} = -\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1} \\
&= -\Lambda^{-1}W_n\Lambda^{-1} - L_n \cdot \Lambda^{-1}\Lambda_1\Lambda^{-1}
\end{aligned}$$

■

Lemma 4

$$H_2 = H_{2,0} + L_n \cdot H_{2,1} + L_n^2 \cdot H_{2,2} + Q_n \cdot H_{2,3}$$

where

$$\begin{aligned} H_{2,0} &\equiv 2\Lambda^{-1}W_n\Lambda^{-1}W_n\Lambda^{-1} \\ H_{2,1} &\equiv 2\Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1} + 2\Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1} - 2\Lambda^{-1}W_{1,n}\Lambda^{-1} \\ H_{2,2} &\equiv 2\Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1} - \Lambda^{-1}\Lambda_2\Lambda^{-1} \\ H_{2,3} &\equiv -2\Lambda^{-1}\Lambda_1\Lambda^{-1} \end{aligned}$$

Proof.

$$\begin{aligned} H_2 &= 2\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1} - \Lambda^{-1}\tilde{\Lambda}_2\Lambda^{-1} \\ &= 2\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1} - \Lambda^{-1}(2\Lambda_1Q_n + 2W_{1,n}L_n + \Lambda_2L_n^2)\Lambda^{-1} \\ &= 2\Lambda^{-1}W_n\Lambda^{-1}W_n\Lambda^{-1} + 2L_n \cdot \Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1} + 2L_n \cdot \Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1} + 2L_n^2 \cdot \Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1} \\ &\quad - 2Q_n \cdot \Lambda^{-1}\Lambda_1\Lambda^{-1} - 2L_n \cdot \Lambda^{-1}W_{1,n}\Lambda^{-1} - L_n^2 \cdot \Lambda^{-1}\Lambda_2\Lambda^{-1} \\ &= 2\Lambda^{-1}W_n\Lambda^{-1}W_n\Lambda^{-1} \\ &\quad + L_n \cdot (2\Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1} + 2\Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1} - 2\Lambda^{-1}W_{1,n}\Lambda^{-1}) \\ &\quad + L_n^2 \cdot (2\Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1} - \Lambda^{-1}\Lambda_2\Lambda^{-1}) \\ &\quad - 2Q_n \cdot \Lambda^{-1}\Lambda_1\Lambda^{-1} \end{aligned}$$

■

Lemma 5

$$H_3 = H_{3,0} + L_n \cdot H_{3,1} + L_n^2 \cdot H_{3,2} + L_n^3 \cdot H_{3,3} + Q_n \cdot H_{3,4} + Q_nL_n \cdot H_{3,5} + S_n \cdot H_{3,6}$$

where

$$\begin{aligned} H_{3,0} &\equiv -6\Lambda^{-1}W_n\Lambda^{-1}W_n\Lambda^{-1}W_n\Lambda^{-1} \\ H_{3,1} &\equiv -6\Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1}W_n\Lambda^{-1} - 6\Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1} - 6\Lambda^{-1}W_n\Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1} \\ &\quad + 6\Lambda^{-1}W_{1,n}\Lambda^{-1}W_n\Lambda^{-1} + 6\Lambda^{-1}W_n\Lambda^{-1}W_{1,n}\Lambda^{-1} \\ H_{3,2} &\equiv -6\Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1} - 6\Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1} - 6\Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1} \\ &\quad + 3\Lambda^{-1}\Lambda_2\Lambda^{-1}W_n\Lambda^{-1} + 3\Lambda^{-1}W_n\Lambda^{-1}\Lambda_2\Lambda^{-1} \\ &\quad + 6\Lambda^{-1}W_{1,n}\Lambda^{-1}\Lambda_1\Lambda^{-1} + 6\Lambda^{-1}\Lambda_1\Lambda^{-1}W_{1,n}\Lambda^{-1} \\ &\quad - 3\Lambda^{-1}W_{2,n}\Lambda^{-1} \\ H_{3,3} &\equiv -6\Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1} + 3\Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_2\Lambda^{-1} + 3\Lambda^{-1}\Lambda_2\Lambda^{-1}\Lambda_1\Lambda^{-1} - \Lambda^{-1}\Lambda_3\Lambda^{-1} \\ H_{3,4} &\equiv 6\Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1} + 6\Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1} - 6\Lambda^{-1}W_{1,n}\Lambda^{-1} \\ H_{3,5} &\equiv 12\Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1} - 6\Lambda^{-1}\Lambda_2\Lambda^{-1} \\ H_{3,6} &\equiv -6\Lambda^{-1}\Lambda_1\Lambda^{-1} \end{aligned}$$

Proof. We have

$$\begin{aligned}
H_3 &= -6\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1} + 3\Lambda^{-1}\tilde{\Lambda}_2\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1} + 3\Lambda^{-1}\tilde{\Lambda}_1\Lambda^{-1}\tilde{\Lambda}_2\Lambda^{-1} - \Lambda^{-1}\tilde{\Lambda}_3\Lambda^{-1} \\
&= -6\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1} \\
&\quad + 3\Lambda^{-1}(2\Lambda_1Q_n + 2W_{1,n}L_n + \Lambda_2L_n^2)\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1} \\
&\quad + 3\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1}(2\Lambda_1Q_n + 2W_{1,n}L_n + \Lambda_2L_n^2)\Lambda^{-1} \\
&\quad - \Lambda^{-1}(6\Lambda_1S_n + 6W_{1,n}Q_n + 3W_{2,n}L_n^2 + 6\Lambda_2L_nQ_n + \Lambda_3L_n^3)\Lambda^{-1}
\end{aligned}$$

Note that the terms on the RHS can be expanded as follows:

$$\begin{aligned}
&-6\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1} \\
&= -6\Lambda^{-1}W_n\Lambda^{-1}W_n\Lambda^{-1}W_n\Lambda^{-1} \\
&\quad - 6L_n \cdot (\Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1}W_n\Lambda^{-1} + \Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1} + \Lambda^{-1}W_n\Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1}) \\
&\quad - 6L_n^2 \cdot (\Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1} + \Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1} + \Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1}) \\
&\quad - 6L_n^3 \cdot \Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1} \\
&\quad 3\Lambda^{-1}(2\Lambda_1Q_n + 2W_{1,n}L_n + \Lambda_2L_n^2)\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1} \\
&= 6L_n \cdot \Lambda^{-1}W_{1,n}\Lambda^{-1}W_n\Lambda^{-1} \\
&\quad + L_n^2 \cdot (3\Lambda^{-1}\Lambda_2\Lambda^{-1}W_n\Lambda^{-1} + 6\Lambda^{-1}W_{1,n}\Lambda^{-1}\Lambda_1\Lambda^{-1}) \\
&\quad + 3L_n^3 \cdot \Lambda^{-1}\Lambda_2\Lambda^{-1}\Lambda_1\Lambda^{-1} \\
&\quad + 6Q_n \cdot \Lambda^{-1}\Lambda_1\Lambda^{-1}W_n\Lambda^{-1} \\
&\quad + 6Q_nL_n \cdot \Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1} \\
&\quad 3\Lambda^{-1}(W_n + \Lambda_1L_n)\Lambda^{-1}(2\Lambda_1Q_n + 2W_{1,n}L_n + \Lambda_2L_n^2)\Lambda^{-1} \\
&= 6L_n \cdot \Lambda^{-1}W_n\Lambda^{-1}W_{1,n}\Lambda^{-1} \\
&\quad + L_n^2 \cdot (3\Lambda^{-1}W_n\Lambda^{-1}\Lambda_2\Lambda^{-1} + 6\Lambda^{-1}\Lambda_1\Lambda^{-1}W_{1,n}\Lambda^{-1}) \\
&\quad + 3L_n^3 \cdot \Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_2\Lambda^{-1} \\
&\quad + 6Q_n \cdot \Lambda^{-1}W_n\Lambda^{-1}\Lambda_1\Lambda^{-1} \\
&\quad + 6Q_nL_n \cdot \Lambda^{-1}\Lambda_1\Lambda^{-1}\Lambda_1\Lambda^{-1} \\
&\quad - \Lambda^{-1}(6\Lambda_1S_n + 6W_{1,n}Q_n + 3W_{2,n}L_n^2 + 6\Lambda_2L_nQ_n + \Lambda_3L_n^3)\Lambda^{-1} \\
&= -6S_n \cdot \Lambda^{-1}\Lambda_1\Lambda^{-1} - 6Q_n \cdot \Lambda^{-1}W_{1,n}\Lambda^{-1} - 3L_n^2 \cdot \Lambda^{-1}W_{2,n}\Lambda^{-1} - 6Q_nL_n \cdot \Lambda^{-1}\Lambda_2\Lambda^{-1} - L_n^3 \cdot \Lambda^{-1}\Lambda_3\Lambda^{-1}
\end{aligned}$$

■

Definition 6

$$\begin{aligned}
h_{0,1} &\equiv \lambda'_1\Lambda^{-1}w_n \\
h_{0,2} &\equiv w'_{1,n}\Lambda^{-1}w_n + \lambda'_1H_1w_n \\
h_{0,3} &\equiv w'_{1,n}H_1w_n + \frac{1}{2}\lambda'_1H_2w_n
\end{aligned}$$

$$\begin{aligned}
h_{1,1} &\equiv \lambda'_1 \Lambda^{-1} \lambda_1 \\
h_{1,2} &\equiv 2\lambda'_1 \Lambda^{-1} w_{1,n} + \lambda'_2 \Lambda^{-1} w_n + \lambda'_1 H_1 \lambda_1 \\
h_{1,3} &\equiv w'_{1,n} \Lambda^{-1} w_{1,n} + w'_{2,n} \Lambda^{-1} w_n + 2\lambda'_1 H_1 w_{1,n} + \lambda'_2 H_1 w_n + \frac{1}{2} \lambda'_1 H_2 \lambda_1
\end{aligned}$$

$$\begin{aligned}
h_{2,2} &\equiv 3\lambda'_1 \Lambda^{-1} \lambda_2 \\
h_{2,3} &\equiv 3\lambda'_2 \Lambda^{-1} w_{1,n} + 3\lambda'_1 \Lambda^{-1} w_{2,n} + \lambda'_3 \Lambda^{-1} w_n + 3\lambda'_1 H_1 \lambda_2 \\
h_{3,3} &\equiv 3\lambda'_2 \Lambda^{-1} \lambda_2 + 4\lambda'_1 \Lambda^{-1} \lambda_3
\end{aligned}$$

Lemma 6

$$g_1(b)' G(\tilde{\beta})^{-1} g(b) = h + h_1 \cdot \sqrt{n}(b - \beta) + \frac{1}{2} h_2 \cdot (\sqrt{n}(b - \beta))^2 + \frac{1}{6} h_3 \cdot (\sqrt{n}(b - \beta))^3 + o_p\left(\frac{1}{n\sqrt{n}}\right),$$

where

$$\begin{aligned}
h &\equiv \frac{1}{\sqrt{n}} h_{0,1} + \frac{1}{n} h_{0,2} + \frac{1}{n\sqrt{n}} h_{0,3} \\
h_1 &\equiv \frac{1}{\sqrt{n}} h_{1,1} + \frac{1}{n} h_{1,2} + \frac{1}{n\sqrt{n}} h_{1,3} \\
h_2 &\equiv \frac{1}{n} h_{2,2} + \frac{1}{n\sqrt{n}} h_{2,3} \\
h_3 &\equiv \frac{1}{n\sqrt{n}} h_{3,3}
\end{aligned}$$

Proof. Note that we have

$$\begin{aligned}
g_1(b) &= g_1 + \frac{1}{\sqrt{n}} g_2 \cdot \sqrt{n}(b - \beta) + \frac{1}{2n} g_3 \cdot (\sqrt{n}(b - \beta))^2 + \frac{1}{6n\sqrt{n}} g_4 \cdot (\sqrt{n}(b - \beta))^3 + o_p\left(\frac{1}{n\sqrt{n}}\right) \\
&= \lambda_1 + \frac{1}{\sqrt{n}} w_{1,n} + \frac{1}{\sqrt{n}} \left(\lambda_2 + \frac{1}{\sqrt{n}} w_{2,n} \right) \sqrt{n}(b - \beta) + \frac{1}{2n} \left(\lambda_3 + \frac{1}{\sqrt{n}} w_{3,n} \right) \cdot (\sqrt{n}(b - \beta))^2 \\
&\quad + \frac{1}{6n\sqrt{n}} \left(\lambda_4 + \frac{1}{\sqrt{n}} w_{4,n} \right) \cdot (\sqrt{n}(b - \beta))^3 + o_p\left(\frac{1}{n\sqrt{n}}\right)
\end{aligned}$$

and

$$\begin{aligned}
g(b) &= \frac{1}{\sqrt{n}} w_n + \frac{1}{\sqrt{n}} g_1 \cdot \sqrt{n}(b - \beta) + \frac{1}{2n} g_2 \cdot (\sqrt{n}(b - \beta))^2 + \frac{1}{6n\sqrt{n}} g_3 \cdot (\sqrt{n}(b - \beta))^3 + o_p\left(\frac{1}{n\sqrt{n}}\right) \\
&= \frac{1}{\sqrt{n}} w_n + \frac{1}{\sqrt{n}} \left(\lambda_1 + \frac{1}{\sqrt{n}} w_{1,n} \right) \cdot \sqrt{n}(b - \beta) + \frac{1}{2n} \left(\lambda_2 + \frac{1}{\sqrt{n}} w_{2,n} \right) \cdot (\sqrt{n}(b - \beta))^2 \\
&\quad + \frac{1}{6n\sqrt{n}} \left(\lambda_3 + \frac{1}{\sqrt{n}} w_{3,n} \right) \cdot (\sqrt{n}(b - \beta))^3 + o_p\left(\frac{1}{n\sqrt{n}}\right)
\end{aligned}$$

By Lemma 2, we also have

$$G(\tilde{\beta})^{-1} = \Lambda^{-1} + \frac{1}{\sqrt{n}} H_1 + \frac{1}{2n} H_2 + \frac{1}{6n\sqrt{n}} H_3 + o_p\left(\frac{1}{n\sqrt{n}}\right)$$

■

Lemma 7

$$\begin{aligned}
h_{0,1} &= \lambda'_1 \Lambda^{-1} w_n \\
h_{0,2} &= w'_{1,n} \Lambda^{-1} w_n + \lambda'_1 H_{1,0} w_n + L_n \cdot \lambda'_1 H_{1,1} w_n \\
h_{0,3} &= w'_{1,n} H_{1,0} w_n + \frac{1}{2} \lambda'_1 H_{2,0} w_n \\
&\quad + L_n \cdot w'_{1,n} H_{1,1} w_n + \frac{1}{2} L_n \cdot \lambda'_1 H_{2,1} w_n + \frac{1}{2} L_n^2 \cdot \lambda'_1 H_{2,2} w_n + \frac{1}{2} Q_n \cdot \lambda'_1 H_{2,3} w_n \\
h_{1,1} &= \lambda'_1 \Lambda^{-1} \lambda_1 \\
h_{1,2} &= 2\lambda'_1 \Lambda^{-1} w_{1,n} + \lambda'_2 \Lambda^{-1} w_n + \lambda'_1 H_{1,0} \lambda_1 + L_n \cdot \lambda'_1 H_{1,1} \lambda_1 \\
h_{1,3} &= w'_{1,n} \Lambda^{-1} w_{1,n} + w'_{2,n} \Lambda^{-1} w_n + 2\lambda'_1 H_{1,0} w_{1,n} + 2L_n \cdot \lambda'_1 H_{1,1} w_{1,n} \\
&\quad + \lambda'_2 H_{1,0} w_n + L_n \cdot \lambda'_2 H_{1,1} w_n \\
&\quad + \frac{1}{2} \lambda'_1 H_{2,0} \lambda_1 + \frac{1}{2} L_n \cdot \lambda'_1 H_{2,1} \lambda_1 + \frac{1}{2} L_n^2 \cdot \lambda'_1 H_{2,2} \lambda_1 + \frac{1}{2} Q_n \cdot \lambda'_1 H_{2,3} \lambda_1 \\
h_{2,2} &= 3\lambda'_1 \Lambda^{-1} \lambda_2 \\
h_{2,3} &= 3\lambda'_2 \Lambda^{-1} w_{1,n} + 3\lambda'_1 \Lambda^{-1} w_{2,n} + \lambda'_3 \Lambda^{-1} w_n + 3\lambda'_1 H_{1,0} \lambda_2 + 3L_n \cdot \lambda'_1 H_{1,1} \lambda_2 \\
h_{3,3} &= 3\lambda'_2 \Lambda^{-1} \lambda_2 + 4\lambda'_1 \Lambda^{-1} \lambda_3
\end{aligned}$$

Proof. Follows from Lemmas 3, 4, and 5. ■

Lemma 8 Let

$$b_1 \equiv \underset{c \in C}{\operatorname{argmin}} g(c)' G \left(\tilde{\beta} \right)^{-1} g(c)$$

Then,

$$\sqrt{n}(b - \beta) = T_1 + \frac{1}{2\sqrt{n}} T_2 + \frac{1}{6n} T_3 + o_p \left(\frac{1}{n} \right)$$

where

$$\begin{aligned}
T_1 &\equiv -\frac{1}{h_{1,1}} h_{0,1} \\
T_2 &\equiv -\frac{2}{h_{1,1}} h_{0,2} + \frac{2}{h_{1,1}^2} h_{1,2} h_{0,1} - \frac{1}{h_{1,1}^3} h_{2,2} h_{0,1}^2 \\
T_3 &\equiv -\frac{6}{h_{1,1}} h_{0,3} + \frac{6h_{1,2} h_{0,2} + 6h_{1,3} h_{0,1}}{h_{1,1}^2} + \frac{-6h_{1,2}^2 h_{0,1} - 3h_{2,3} h_{0,1}^2 - 6h_{2,2} h_{0,1} h_{0,2}}{h_{1,1}^3} \\
&\quad + \frac{9h_{1,2} h_{2,2} h_{0,1}^2 + h_{3,3} h_{0,1}^3}{h_{1,1}^4} - \frac{3}{h_{1,1}^5} h_{2,2}^2 h_{0,1}^3
\end{aligned}$$

Proof. We now solve for $\sqrt{n}(b - \beta)$ by iterative substitution. Using Lemma 6, we first write the FOC as

$$0 = \frac{1}{\sqrt{n}} h_{0,1} + \left(\frac{1}{\sqrt{n}} h_{1,1} \right) \cdot \sqrt{n}(b - \beta) + o_p \left(\frac{1}{\sqrt{n}} \right),$$

from which we obtain

$$\sqrt{n}(b - \beta) = -\frac{1}{h_{1,1}}h_{0,1} + o_p(1) = T_1 + o_p(1)$$

We now write the FOC as

$$0 = \frac{1}{\sqrt{n}}h_{0,1} + \frac{1}{n}h_{0,2} + \left(\frac{1}{\sqrt{n}}h_{1,1} + \frac{1}{n}h_{1,2}\right) \cdot (\sqrt{n}(b - \beta)) + \frac{1}{2} \left(\frac{1}{n}h_{2,2}\right) \cdot (\sqrt{n}(b - \beta))^2 + o_p\left(\frac{1}{n}\right).$$

Writing

$$\sqrt{n}(b - \beta) = -\frac{1}{h_{1,1}}h_{0,1} + \frac{x}{\sqrt{n}}$$

we can rewrite the FOC as

$$0 = \frac{1}{n} \left(h_{0,2} + \frac{1}{2} \frac{h_{2,2}}{h_{1,1}^2} h_{0,1}^2 + h_{1,1}x - \frac{h_{1,2}}{h_{1,1}} h_{0,1} \right) + o_p\left(\frac{1}{n}\right).$$

Solving for x , we obtain

$$\begin{aligned} \sqrt{n}(b - \beta) &= T_1 + \frac{1}{2\sqrt{n}} \left(-\frac{2h_{0,2}h_{1,1}^2 + h_{2,2}h_{0,1}^2 - 2h_{1,2}h_{0,1}h_{1,1}}{h_{1,1}^3} \right) + o_p\left(\frac{1}{\sqrt{n}}\right) \\ &= T_1 + \frac{1}{2\sqrt{n}}T_2 + o_p\left(\frac{1}{\sqrt{n}}\right). \end{aligned}$$

We now write the FOC as

$$\begin{aligned} 0 &= \frac{1}{\sqrt{n}}h_{0,1} + \frac{1}{n}h_{0,2} + \frac{1}{n\sqrt{n}}h_{0,3} + \left(\frac{1}{\sqrt{n}}h_{1,1} + \frac{1}{n}h_{1,2} + \frac{1}{n\sqrt{n}}h_{1,3}\right) \cdot \sqrt{n}(b - \beta) \\ &\quad + \frac{1}{2} \left(\frac{1}{n}h_{2,2} + \frac{1}{n\sqrt{n}}h_{2,3}\right) \cdot (\sqrt{n}(b - \beta))^2 + \frac{1}{6} \frac{1}{n\sqrt{n}}h_{3,3} \cdot (\sqrt{n}(b - \beta))^3 + o_p\left(\frac{1}{n\sqrt{n}}\right). \end{aligned}$$

Writing

$$\sqrt{n}(b - \beta) = -\frac{1}{h_{1,1}}h_{0,1} - \frac{1}{2\sqrt{n}} \frac{2h_{0,2}h_{1,1}^2 + h_{2,2}h_{0,1}^2 - 2h_{1,2}h_{0,1}h_{1,1}}{h_{1,1}^3} + \frac{x}{n}$$

we can rewrite the FOC as

$$\begin{aligned} 0 &= \frac{h_{1,1}x - \frac{h_{1,2}}{h_{1,1}}h_{0,2} + \frac{1}{2} \frac{h_{2,2}}{h_{1,1}^4} h_{0,1}^3 + \frac{h_{1,2}^2}{h_{1,1}^2} h_{0,1} + \frac{h_{2,2}^2}{h_{1,1}^2} h_{0,1}h_{0,2} - \frac{h_{1,3}}{h_{1,1}}h_{0,1} + h_{0,3} + \frac{1}{2} \frac{h_{2,3}}{h_{1,1}^2} h_{0,1}^2 - \frac{3}{2} \frac{h_{1,2}}{h_{1,1}^3} h_{2,2}h_{0,1}^2 - \frac{1}{6} \frac{h_{3,3}}{h_{1,1}^3} h_{0,1}^3}{n^{\frac{3}{2}}} \\ &\quad + o_p\left(\frac{1}{n\sqrt{n}}\right) \end{aligned}$$

Solving for x , we obtain

$$\sqrt{n}(b - \beta) = T_1 + \frac{1}{2\sqrt{n}}T_2 + \frac{1}{6n}T_3 + o_p\left(\frac{1}{n}\right)$$

■

Lemma 9

$$\begin{aligned} T_1 &= \bar{T}_1 \\ T_2 &= \bar{T}_2 + L_n \cdot \tilde{T}_2 \\ T_3 &= \bar{T}_3 + L_n \cdot \tilde{T}_{3,1} + L_n^2 \cdot \tilde{T}_{3,2} + Q_n \cdot \tilde{T}_{3,3} \end{aligned}$$

where

$$\begin{aligned}

\end{aligned}$$

$$\begin{aligned}
\tilde{T}_{3,1} &\equiv -\frac{6}{(\lambda'_1 \Lambda^{-1} \lambda_1)} (w'_{1,n} H_{1,1} w_n) - \frac{3}{(\lambda'_1 \Lambda^{-1} \lambda_1)} (\lambda'_1 H_{2,1} w_n) \\
&+ \frac{6 (\lambda'_1 H_{1,1} \lambda_1) (w'_{1,n} \Lambda^{-1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} + \frac{6 (\lambda'_1 H_{1,1} \lambda_1) (\lambda'_1 H_{1,0} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \\
&+ \frac{12 (\lambda'_1 \Lambda^{-1} w_{1,n}) (\lambda'_1 H_{1,1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} + \frac{6 (\lambda'_2 \Lambda^{-1} w_n) (\lambda'_1 H_{1,1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} + \frac{6 (\lambda'_1 H_{1,0} \lambda_1) (\lambda'_1 H_{1,1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \\
&+ \frac{12 (\lambda'_1 H_{1,1} w_{1,n}) (\lambda'_1 \Lambda^{-1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} + \frac{6 (\lambda'_2 H_{1,1} w_n) (\lambda'_1 \Lambda^{-1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} + \frac{3 (\lambda'_1 H_{2,1} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \\
&- \frac{24 (\lambda'_1 H_{1,1} \lambda_1) (\lambda'_1 \Lambda^{-1} w_{1,n}) (\lambda'_1 \Lambda^{-1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} - \frac{12 (\lambda'_1 H_{1,1} \lambda_1) (\lambda'_2 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \\
&- \frac{12 (\lambda'_1 H_{1,1} \lambda_1) (\lambda'_1 H_{1,0} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \\
&- \frac{9 (\lambda'_1 H_{1,1} \lambda_2) (\lambda'_1 \Lambda^{-1} w_n)^2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \\
&- \frac{18 (\lambda'_1 \Lambda^{-1} \lambda_2) (\lambda'_1 \Lambda^{-1} w_n) (\lambda'_1 H_{1,1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \\
&+ \frac{27 (\lambda'_1 H_{1,1} \lambda_1) (\lambda'_1 \Lambda^{-1} \lambda_2) (\lambda'_1 \Lambda^{-1} w_n)^2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} \\
\\
\tilde{T}_{3,2} &\equiv -\frac{3}{(\lambda'_1 \Lambda^{-1} \lambda_1)} (\lambda'_1 H_{2,2} w_n) \\
&+ \frac{6 (\lambda'_1 H_{1,1} \lambda_1) (\lambda'_1 H_{1,1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \\
&+ \frac{3 (\lambda'_1 H_{2,2} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \\
&+ \frac{-6 (\lambda'_1 H_{1,1} \lambda_1)^2 (\lambda'_1 \Lambda^{-1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \\
\\
\tilde{T}_{3,3} &\equiv -\frac{3}{(\lambda'_1 \Lambda^{-1} \lambda_1)} (\lambda'_1 H_{2,3} w_n) + \frac{3 (\lambda'_1 H_{2,3} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2}
\end{aligned}$$

Proof. Follows from Lemmas 7 and 8. ■

Theorem 1 Let

$$b_2 \equiv \underset{c \in C}{\operatorname{argmin}} g(c)' G(b_1)^{-1} g(c)$$

and

$$b_3 \equiv \underset{c \in C}{\operatorname{argmin}} g(c)' G(b_2)^{-1} g(c)$$

Then,

$$\sqrt{n}(b_3 - \beta) = \bar{T}_1 + \frac{1}{2\sqrt{n}} (\bar{T}_2 + \bar{T}_1 \cdot \tilde{T}_2) + \frac{1}{6n} (\bar{T}_3 + \bar{T}_1 \cdot \tilde{T}_{3,1} + \bar{T}_1^2 \cdot \tilde{T}_{3,2} + (\bar{T}_2 + \bar{T}_1 \cdot \tilde{T}_2) \cdot \tilde{T}_{3,3}) + o_p\left(\frac{1}{n}\right)$$

Proof. We use Lemmas 8 and 9. With induction, we can obtain

$$\sqrt{n}(b_2 - \beta) = \bar{T}_1 + \frac{1}{2\sqrt{n}} (\bar{T}_2 + \bar{T}_1 \cdot \tilde{T}_2) + \frac{1}{6n} (\bar{T}_3 + \bar{T}_1 \cdot \tilde{T}_{3,1} + \bar{T}_1^2 \cdot \tilde{T}_{3,2} + (\bar{T}_2 + L_1 \cdot \tilde{T}_2) \cdot \tilde{T}_{3,3}) + o_p\left(\frac{1}{n}\right)$$

and

$$\sqrt{n}(b_3 - \beta) = \bar{T}_1 + \frac{1}{2\sqrt{n}} (\bar{T}_2 + \bar{T}_1 \cdot \tilde{T}_2) + \frac{1}{6n} (\bar{T}_3 + \bar{T}_1 \cdot \tilde{T}_{3,1} + \bar{T}_1^2 \cdot \tilde{T}_{3,2} + (\bar{T}_2 + \bar{T}_1 \cdot \tilde{T}_2) \cdot \tilde{T}_{3,3}) + o_p\left(\frac{1}{n}\right)$$

■

2 Higher Order Moments

For Maple/Mathematica programming purpose, it is convenient to introduce a new set of symbols:

$$u_0 \equiv \psi(z_i, \beta) - \lambda = \psi(z_i, \beta)$$

$$u_1 \equiv \psi_1(z_i, \beta) - \lambda_1$$

$$u_2 \equiv \psi_2(z_i, \beta) - \lambda_2$$

$$u_3 \equiv \psi_3(z_i, \beta) - \lambda_3$$

$$u_4 \equiv \psi_4(z_i, \beta) - \lambda_4$$

$$U_0 \equiv \Psi(z_i, \beta) - \Lambda$$

$$U_1 \equiv \Psi_1(z_i, \beta) - \Lambda_1$$

$$U_2 \equiv \Psi_2(z_i, \beta) - \Lambda_2$$

$$U_3 \equiv \Psi_3(z_i, \beta) - \Lambda_3$$

$$v_0 \equiv \psi(z_j, \beta) - \lambda = \psi(z_j, \beta) \quad i \neq j$$

$$v_1 \equiv \psi_1(z_j, \beta) - \lambda_1$$

$$v_2 \equiv \psi_2(z_j, \beta) - \lambda_2$$

$$v_3 \equiv \psi_3(z_j, \beta) - \lambda_3$$

$$v_4 \equiv \psi_4(z_j, \beta) - \lambda_4$$

$$V_0 \equiv \Psi(z_j, \beta) - \Lambda$$

$$V_1 \equiv \Psi_1(z_j, \beta) - \Lambda_1$$

$$V_2 \equiv \Psi_2(z_j, \beta) - \Lambda_2$$

$$V_3 \equiv \Psi_3(z_j, \beta) - \Lambda_3$$

2.1 Higher Order Bias

We focus on the version of GMM b_3 iterated 3 times.¹ This is convenient because its third order properties are invariant to the choice of initial consistent estimator. With Theorem 1, we can see that

Theorem 2

$$\begin{aligned} E[b_2 - \beta] &\approx \frac{1}{\sqrt{n}} E[\bar{T}_1] + \frac{1}{2n} E[\bar{T}_2 + \bar{T}_1 \cdot \tilde{T}_2] \\ &= \frac{1}{2n} E[\bar{T}_2] + \frac{1}{2n} E[\bar{T}_1 \cdot \tilde{T}_2] \\ &\equiv \frac{B}{n} \end{aligned}$$

Definition 7

$$\begin{aligned} \Gamma_{0,1} &\equiv E[u_0 u'_1] = E[\psi(z_i, \beta) (\psi_1(z_i, \beta) - \lambda_1)'] \\ &= E[\psi(z_i, \beta) \psi_1(z_i, \beta)'] \\ \Gamma_{0,2} &\equiv E[u_0 u'_2] = E[\psi(z_i, \beta) (\psi_2(z_i, \beta) - \lambda_2)'] \\ &= E[\psi(z_i, \beta) \psi_2(z_i, \beta)'] \\ \Gamma_{1,1} &\equiv E[u_1 u'_1] = E[(\psi_1(z_i, \beta) - \lambda_1) (\psi_1(z_i, \beta) - \lambda_1)'] \\ &= E[\psi_1(z_i, \beta) \psi_1(z_i, \beta)'] - \lambda_1 \lambda'_1 \\ \Upsilon_{0,0} &\equiv E[u_0 \lambda'_1 \Lambda^{-1} U_0] \Lambda^{-1} \\ &= E[\psi(z_i, \beta) \lambda'_1 \Lambda^{-1} \Psi(z_i, \beta)] \Lambda^{-1} \\ \Upsilon_{1,0} &\equiv E[u_1 \lambda'_1 \Lambda^{-1} U_0] \Lambda^{-1} \\ &= E[\psi_1(z_i, \beta) \lambda'_1 \Lambda^{-1} \Psi(z_i, \beta)] \Lambda^{-1} - \lambda_1 \lambda'_1 \Lambda^{-1} \\ \Upsilon_{0,1} &\equiv E[u_0 \lambda'_1 \Lambda^{-1} U_1] \Lambda^{-1} \\ &= E[\psi_0(z_i, \beta) \lambda'_1 \Lambda^{-1} \Psi_1(z_i, \beta)] \Lambda^{-1} \\ \Upsilon_{0,0}^{(2)} &\equiv E[u_0 \lambda'_2 \Lambda^{-1} U_0] \Lambda^{-1} \\ &= E[\psi(z_i, \beta) \lambda'_2 \Lambda^{-1} \Psi(z_i, \beta)] \Lambda^{-1} \\ \Upsilon_{0,0}^{(3)} &\equiv E[(\lambda'_1 \Lambda^{-1} u_0) \cdot U_0 \Lambda^{-1}] \\ &= E[(\lambda'_1 \Lambda^{-1} \psi(z_i, \beta)) \cdot \Psi(z_i, \beta) \Lambda^{-1}] \\ \Upsilon_{0,0}^{(4)} &\equiv E[U_0 \Lambda^{-1} u_0] \\ &= E[\Psi(z_i, \beta) \Lambda^{-1} \psi(z_i, \beta)] \\ \Xi_{0,0} &\equiv E[\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1] \\ \Xi_{0,2} &\equiv E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1)^2] \end{aligned}$$

¹This means that b_3 is a four step estimator. Recall that

$$\begin{aligned} b_1 &= \underset{c \in C}{\operatorname{argmin}} g_n(c)' G_n(\tilde{\beta})^{-1} g_n(c) \\ b_2 &\equiv \underset{c \in C}{\operatorname{argmin}} g(c)' G(b_1)^{-1} g(c) \\ b_3 &\equiv \underset{c \in C}{\operatorname{argmin}} g(c)' G(b_2)^{-1} g(c) \end{aligned}$$

Note that

$$B \equiv \sum_{k=1}^8 \tilde{B}_k$$

and

$$\begin{aligned}
\tilde{B}_1 &\equiv \frac{1}{2} E \left[-\frac{2}{\lambda'_1 \Lambda^{-1} \lambda_1} w'_{1,n} \Lambda^{-1} w_n \right] \\
&= -\frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} E [(\psi_1(z_i, \beta) - \lambda_1)' \Lambda^{-1} \psi(z_i, \beta)] \\
&= -\frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} \text{trace} (\Lambda^{-1} E [\psi(z_i, \beta) (\psi_1(z_i, \beta) - \lambda_1)']) \\

&= -\frac{1}{(\lambda'_1\Lambda^{-1}\lambda_1)^2}E[(\lambda'_1\Lambda^{-1}(\psi(z_i,\beta)\psi(z_i,\beta)'-\Lambda)\Lambda^{-1}\lambda_1)(\lambda'_1\Lambda^{-1}\psi(z_i,\beta))] \\
&= -\frac{1}{(\lambda'_1\Lambda^{-1}\lambda_1)^2}E[(\lambda'_1\Lambda^{-1}\psi(z_i,\beta)\psi(z_i,\beta)'\Lambda^{-1}\lambda_1)(\lambda'_1\Lambda^{-1}\psi(z_i,\beta))] \\
\\
\tilde{B}_6 &\equiv \frac{1}{2}E\left[-\frac{1}{(\lambda'_1\Lambda^{-1}\lambda_1)^3}(3\lambda'_1\Lambda^{-1}\lambda_2)(\lambda'_1\Lambda^{-1}w_n)^2\right] \\
&= -\frac{(3\lambda'_1\Lambda^{-1}\lambda_2)}{2(\lambda'_1\Lambda^{-1}\lambda_1)^3}E[(\lambda'_1\Lambda^{-1}w_n)^2] \\
&= -\frac{(3\lambda'_1\Lambda^{-1}\lambda_2)}{2(\lambda'_1\Lambda^{-1}\lambda_1)^3}\lambda'_1\Lambda^{-1}\Lambda\Lambda^{-1}\lambda_1 \\
&= -\frac{(3\lambda'_1\Lambda^{-1}\lambda_2)}{2(\lambda'_1\Lambda^{-1}\lambda_1)^3}\lambda'_1\Lambda^{-1}\lambda_1 \\
&= -\frac{3\lambda'_2\Lambda^{-1}\lambda_1}{2(\lambda'_1\Lambda^{-1}\lambda_1)^2}
\end{aligned}$$

$$\begin{aligned}
\tilde{B}_7 &\equiv \frac{1}{2}E\left[\left(-\frac{\lambda'_1\Lambda^{-1}w_n}{\lambda'_1\Lambda^{-1}\lambda_1}\right)\left(-\frac{2}{\lambda'_1\Lambda^{-1}\lambda_1}\lambda'_1H_{1,1}w_n\right)\right] \\
&= \frac{1}{(\lambda'_1\Lambda^{-1}\lambda_1)^2}E[(\lambda'_1\Lambda^{-1}w_n)(\lambda'_1(-\Lambda^{-1}\Lambda_1\Lambda^{-1})w_n)] \\
&= -\frac{1}{(\lambda'_1\Lambda^{-1}\lambda_1)^2}\lambda'_1\Lambda^{-1}\Lambda\Lambda^{-1}\Lambda_1\Lambda^{-1}\lambda_1 \\
&= -\frac{1}{(\lambda'_1\Lambda^{-1}\lambda_1)^2}\lambda'_1\Lambda^{-1}\Lambda_1\Lambda^{-1}\lambda_1
\end{aligned}$$

$$\begin{aligned}
\tilde{B}_8 &\equiv \frac{1}{2} E \left[\left(-\frac{\lambda'_1 \Lambda^{-1} w_n}{\lambda'_1 \Lambda^{-1} \lambda_1} \right) \left(\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} (\lambda'_1 H_{1,1} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n) \right) \right] \\
&= -\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E [(\lambda'_1 \Lambda^{-1} w_n) (\lambda'_1 H_{1,1} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n)] \\
&= -\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E [(\lambda'_1 (-\Lambda^{-1} \Lambda_1 \Lambda^{-1}) \lambda_1) (\lambda'_1 \Lambda^{-1} w_n)^2] \\
&= \frac{\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \lambda'_1 \Lambda^{-1} \Lambda \Lambda^{-1} \lambda_1 \\
&= \frac{\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2}
\end{aligned}$$

It follows that

$$\begin{aligned}
B &= -\frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} \frac{\text{trace}(\Lambda^{-1} \Lambda_1)}{2} + \frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} E [\lambda'_1 \Lambda^{-1} \psi(z_i, \beta) \psi(z_i, \beta)' \Lambda^{-1} \psi(z_i, \beta)] \\
&\quad + \frac{\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} + \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \lambda'_2 \Lambda^{-1} \lambda_1 \\
&\quad - \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [(\lambda'_1 \Lambda^{-1} \psi(z_i, \beta) \psi(z_i, \beta)' \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} \psi(z_i, \beta))] - \frac{3\lambda'_2 \Lambda^{-1} \lambda_1}{2(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \\
&\quad - \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1 + \frac{\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \\
&= -\frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} \frac{\text{trace}(\Lambda^{-1} \Lambda_1)}{2} + \frac{\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} - \frac{\lambda'_2 \Lambda^{-1} \lambda_1}{2(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \\
&\quad + \frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} E [\lambda'_1 \Lambda^{-1} \psi(z_i, \beta) \psi(z_i, \beta)' \Lambda^{-1} \psi(z_i, \beta)] \\
&\quad - \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [\lambda'_1 \Lambda^{-1} \psi(z_i, \beta) \psi(z_i, \beta)' \Lambda^{-1} \lambda_1 \lambda'_1 \Lambda^{-1} \psi(z_i, \beta)]
\end{aligned}$$

or

Theorem 3

$$B \equiv \sum_{k=1}^5 B_k$$

where

$$\begin{aligned}
B_1 &\equiv -\frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} \frac{\text{trace}(\Lambda^{-1} \Lambda_1)}{2} \\
B_2 &\equiv \frac{\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \\
B_3 &\equiv -\frac{\lambda'_2 \Lambda^{-1} \lambda_1}{2 (\lambda'_1 \Lambda^{-1} \lambda_1)^2} \\
B_4 &\equiv \frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} E[\lambda'_1 \Lambda^{-1} u_0 u'_0 \Lambda^{-1} u_0] = \frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} E[\lambda'_1 \Lambda^{-1} (U_0 + \Lambda) \Lambda^{-1} u_0] = \frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} E[\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} u_0] \\
&= \frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} \text{trace}(\Upsilon_{0,0}) \\
B_5 &\equiv -\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E[\lambda'_1 \Lambda^{-1} u_0 u'_0 \Lambda^{-1} \lambda_1 \lambda'_1 \Lambda^{-1} u_0] = -\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E[\lambda'_1 \Lambda^{-1} (U_0 + \Lambda) \Lambda^{-1} \lambda_1 \lambda'_1 \Lambda^{-1} u_0] \\
&= -\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} u_0)] = -\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1)] \\
&= -\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \lambda'_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1
\end{aligned}$$

Remark 1 The last equality in (2) follows from

$$\begin{aligned}
\Lambda_1 &= E[\partial\Psi(z_i, \beta)/\partial c] = E[\psi(z_i, \beta) \psi_1(z_i, \beta)' + \psi_1(z_i, \beta) \psi(z_i, \beta)'] \\
&= E[\psi(z_i, \beta) \psi_1(z_i, \beta)'] + (E[\psi(z_i, \beta) \psi_1(z_i, \beta)'])'
\end{aligned}$$

and the lemma below.

Lemma 10 For an arbitrary $k \times k$ matrice A , and an arbitrary symmetric $k \times k$ matrice B , we have $\text{trace}(B^{-1}A) = \frac{1}{2} \text{trace}(B^{-1}(A + A'))$ and $\text{trace}((A + A')^{-1}A) = \frac{k}{2}$

Proof. The first claim follows from

$$\text{trace}(B^{-1}A') = \text{trace}(A'B^{-1}) = \text{trace}((A'B^{-1})') = \text{trace}(B^{-1}A)$$

The second claim follows from

$$\text{trace}((A + A')^{-1}A') = \text{trace}(A'(A + A')^{-1}) = \text{trace}((A'(A + A')^{-1})') = \text{trace}((A + A')^{-1}A)$$

and

$$\text{trace}((A + A')^{-1}A) + \text{trace}((A + A')^{-1}A') = \text{trace}((A + A')^{-1}(A + A')) = \text{trace}(I_k) = k$$

■

2.2 Higher Order MSE

Again, we focus on the version of GMM iterated 3 times, i.e., b_3 . With Theorem 1, we can see that

$$\begin{aligned} E \left[(\sqrt{n}(b_2 - \beta))^2 \right] &\approx E \left[\bar{T}_1^2 \right] \\ &+ \frac{1}{\sqrt{n}} E \left[\bar{T}_1 \cdot (\bar{T}_2 + \bar{T}_1 \cdot \tilde{T}_2) \right] \end{aligned} \quad (3)$$

$$+ \frac{1}{n} E \left[\left(\frac{1}{2} (\bar{T}_2 + \bar{T}_1 \cdot \tilde{T}_2) \right)^2 \right] \quad (4)$$

$$+ \frac{1}{3n} E \left[\bar{T}_1 \cdot (\bar{T}_3 + \bar{T}_1 \cdot \tilde{T}_{3,1} + \bar{T}_1^2 \cdot \tilde{T}_{3,2} + \bar{T}_2 \cdot \tilde{T}_{3,3} + \bar{T}_1 \cdot \tilde{T}_2 \cdot \tilde{T}_{3,3}) \right] \quad (5)$$

Theorem 4

$$E \left[\bar{T}_1^2 \right] = E \left[\left(-\frac{\lambda'_1 \Lambda^{-1} w_n}{\lambda'_1 \Lambda^{-1} \lambda_1} \right)^2 \right] = \frac{\lambda'_1 \Lambda^{-1} \Lambda \Lambda^{-1} \lambda_1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} = \frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1}$$

2.3 Term (3)

We now provide a detailed analysis of (3).

Theorem 5

$$\frac{1}{\sqrt{n}} E \left[\bar{T}_1 \cdot (\bar{T}_2 + \bar{T}_1 \cdot \tilde{T}_2) \right] = \frac{1}{n} \sum_{k=1}^8 M_k$$

where

$$\begin{aligned} M_1 &\equiv \sqrt{n} E \left[\left(-\frac{\lambda'_1 \Lambda^{-1} w_n}{\lambda'_1 \Lambda^{-1} \lambda_1} \right) \left(-\frac{2}{\lambda'_1 \Lambda^{-1} \lambda_1} w'_{1,n} \Lambda^{-1} w_n \right) \right] \\ M_2 &\equiv \sqrt{n} E \left[\left(-\frac{\lambda'_1 \Lambda^{-1} w_n}{\lambda'_1 \Lambda^{-1} \lambda_1} \right) \left(-\frac{2}{\lambda'_1 \Lambda^{-1} \lambda_1} \lambda'_1 H_{1,0} w_n \right) \right] \\ M_3 &\equiv \sqrt{n} E \left[\left(-\frac{\lambda'_1 \Lambda^{-1} w_n}{\lambda'_1 \Lambda^{-1} \lambda_1} \right) \left(\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} (2\lambda'_1 \Lambda^{-1} w_{1,n}) (\lambda'_1 \Lambda^{-1} w_n) \right) \right] \\ M_4 &\equiv \sqrt{n} E \left[\left(-\frac{\lambda'_1 \Lambda^{-1} w_n}{\lambda'_1 \Lambda^{-1} \lambda_1} \right) \left(\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} (\lambda'_2 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \right) \right] \\ M_5 &\equiv \sqrt{n} E \left[\left(-\frac{\lambda'_1 \Lambda^{-1} w_n}{\lambda'_1 \Lambda^{-1} \lambda_1} \right) \left(\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} (\lambda'_1 H_{1,0} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n) \right) \right] \\ M_6 &\equiv \sqrt{n} E \left[\left(-\frac{\lambda'_1 \Lambda^{-1} w_n}{\lambda'_1 \Lambda^{-1} \lambda_1} \right) \left(-\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (3\lambda'_1 \Lambda^{-1} \lambda_2) (\lambda'_1 \Lambda^{-1} w_n)^2 \right) \right] \\ M_7 &\equiv \sqrt{n} E \left[\left(-\frac{\lambda'_1 \Lambda^{-1} w_n}{\lambda'_1 \Lambda^{-1} \lambda_1} \right)^2 \left(-\frac{2}{\lambda'_1 \Lambda^{-1} \lambda_1} \lambda'_1 H_{1,1} w_n \right) \right] \\ M_8 &\equiv \sqrt{n} E \left[\left(-\frac{\lambda'_1 \Lambda^{-1} w_n}{\lambda'_1 \Lambda^{-1} \lambda_1} \right)^2 \left(\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} (\lambda'_1 H_{1,1} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n) \right) \right] \end{aligned}$$

Lemma 11

$$M_1 = \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \text{trace}(\Psi_{1,0})$$

Proof. Note that

$$\begin{aligned}
& \sqrt{n} \left(-\frac{\lambda'_1 \Lambda^{-1} w_n}{\lambda'_1 \Lambda^{-1} \lambda_1} \right) \cdot \left(-\frac{2}{\lambda'_1 \Lambda^{-1} \lambda_1} w'_{1,n} \Lambda^{-1} w_n \right) \\
= & \sqrt{n} \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n \lambda'_1 \Lambda^{-1} (\psi(z_i, \beta) - \lambda) \right) \left(\frac{1}{n} \sum_{j=1}^n \sum_{k=1}^n (\psi_1(z_j, \beta) - \lambda_1)' \Lambda^{-1} (\psi(z_k, \beta) - \lambda) \right) \\
= & \frac{1}{n} \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \sum_{i=1}^n \sum_{j=1}^n \sum_{k=1}^n \lambda'_1 \Lambda^{-1} (\psi(z_i, \beta) - \lambda) (\psi_1(z_j, \beta) - \lambda_1)' \Lambda^{-1} (\psi(z_k, \beta) - \lambda)
\end{aligned}$$

Because $E [\lambda'_1 \Lambda^{-1} (\psi(z_i, \beta) - \lambda) (\psi_1(z_j, \beta) - \lambda_1)' \Lambda^{-1} (\psi(z_k, \beta) - \lambda)] = 0$ unless $i = j = k$, we have

$$\begin{aligned}
& E \left[\sqrt{n} \left(-\frac{\lambda'_1 \Lambda^{-1} w_n}{\lambda'_1 \Lambda^{-1} \lambda_1} \right) \cdot \left(-\frac{2}{\lambda'_1 \Lambda^{-1} \lambda_1} w'_{1,n} \Lambda^{-1} w_n \right) \right] \\
= & \frac{1}{n} \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \sum_{i=1}^n \lambda'_1 \Lambda^{-1} E [(\psi(z_i, \beta) - \lambda) (\psi_1(z_i, \beta) - \lambda_1)' \Lambda^{-1} (\psi(z_i, \beta) - \lambda)] \\
= & \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \lambda'_1 \Lambda^{-1} E [(\psi(z_i, \beta) - \lambda) (\psi_1(z_i, \beta) - \lambda_1)' \Lambda^{-1} (\psi(z_i, \beta) - \lambda)]
\end{aligned}$$

We therefore have

$$M_1 = \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [(\lambda'_1 \Lambda^{-1} u_0) (u'_1 \Lambda^{-1} u_0)]$$

Because

$$\begin{aligned}
E [(\lambda'_1 \Lambda^{-1} u_0) (u'_1 \Lambda^{-1} u_0)] &= E [(u'_1 \Lambda^{-1} u_0) (u'_0 \Lambda^{-1} \lambda_1)] \\
&= E [u'_1 \Lambda^{-1} u_0 u'_0 \Lambda^{-1} \lambda_1] \\
&= E [u'_1 \Lambda^{-1} \Psi(z_i, \beta) \Lambda^{-1} \lambda_1] \\
&= E [u'_1 \Lambda^{-1} (U_0 + \Lambda) \Lambda^{-1} \lambda_1] \\
&= E [u'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1] \\
&= E [\text{trace}(u'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1)] \\
&= E [\text{trace}(\lambda_1 u'_1 \Lambda^{-1} U_0 \Lambda^{-1})] \\
&= E [\text{trace}(\Lambda^{-1} U_0 \Lambda^{-1} \lambda_1 u'_1)] \\
&= E [\text{trace}((\lambda_1 u'_1)' (\Lambda^{-1} U_0 \Lambda^{-1})')] \\
&= E [\text{trace}(u_1 \lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1})] \\
&= \text{trace}(\Psi_{1,0})
\end{aligned}$$

we have

$$M_1 = \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \text{trace}(\Psi_{1,0})$$

■

Lemma 12

$$M_2 = -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \Xi_{0,0}$$

Proof. As in the proof of Lemma 11, we can obtain

$$M_2 = -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [(\lambda'_1 \Lambda^{-1} \psi(z_i, \beta)) \lambda'_1 \Lambda^{-1} (\psi(z_i, \beta) \psi(z_i, \beta)' - \Lambda) \Lambda^{-1} \psi(z_i, \beta)]$$

and hence

$$\begin{aligned} M_2 &= -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} u_0)] \\ &= -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0)] \\ &= -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} u_0) (u'_0 \Lambda^{-1} \lambda_1)] \\ &= -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} u_0 u'_0 \Lambda^{-1} \lambda_1] \\ &= -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} (U_0 + \Lambda) \Lambda^{-1} \lambda_1] \\ &= -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1] \\ &= -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \Xi_{0,0} \end{aligned}$$

■

Lemma 13

$$M_3 = -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \lambda'_1 \Lambda^{-1} \Upsilon_{1,0} \lambda_1$$

Proof. As in the proof of Lemma 11, we can obtain

$$\begin{aligned} M_3 &= -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E [(\lambda'_1 \Lambda^{-1} \psi(z_i, \beta))^2 \lambda'_1 \Lambda^{-1} (\psi(z_i, \beta) - \lambda_1)] \\ &= -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E [(\lambda'_1 \Lambda^{-1} u_0)^2 (\lambda'_1 \Lambda^{-1} u_1)] \\ &= -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E [(\lambda'_1 \Lambda^{-1} u_0 u'_0 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} u_1)] \\ &= -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E [(\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} (U_0 + \Lambda) \Lambda^{-1} \lambda_1)] \\ &= -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E [(\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1)] \\ &= -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \lambda'_1 \Lambda^{-1} \Upsilon_{1,0} \lambda_1 \end{aligned}$$

■

Lemma 14

$$M_4 = -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \lambda'_2 \Lambda^{-1} \Upsilon_{0,0} \lambda_1$$

Proof. As in the proof of Lemma 11, we can obtain

$$\begin{aligned}
M_4 &= -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E \left[(\lambda'_1 \Lambda^{-1} \psi(z_i, \beta))^2 \lambda'_2 \Lambda^{-1} \psi(z_i, \beta) \right] \\
&= -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E \left[(\lambda'_1 \Lambda^{-1} u_0)^2 (\lambda'_2 \Lambda^{-1} u_0) \right] \\
&= -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E \left[(\lambda'_1 \Lambda^{-1} u_0 u'_0 \Lambda^{-1} \lambda_1) (\lambda'_2 \Lambda^{-1} u_0) \right] \\
&= -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E \left[(\lambda'_2 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) \right] \\
&= -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \lambda'_2 \Lambda^{-1} \Upsilon_{0,0} \lambda_1
\end{aligned}$$

■

Lemma 15

$$M_5 = \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \Xi_{0,2}$$

Proof. As in the proof of Lemma 11, we can obtain

$$\begin{aligned}
M_5 &= \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E \left[(\lambda'_1 \Lambda^{-1} \psi(z_i, \beta))^2 \lambda'_1 \Lambda^{-1} (\psi(z_i, \beta) \psi(z_i, \beta)' - \Lambda) \Lambda^{-1} \lambda_1 \right] \\
&= \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E \left[(\lambda'_1 \Lambda^{-1} u_0)^2 (\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) \right] \\
&= \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E \left[(\lambda'_1 \Lambda^{-1} u_0 u'_0 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) \right] \\
&= \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E \left[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1)^2 \right] \\
&=
\end{aligned}$$

■

Lemma 16

$$M_6 = 3 \frac{(\lambda'_1 \Lambda^{-1} \lambda_2)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (\lambda'_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1)$$

Proof. As in the proof of Lemma 11, we can obtain

$$\begin{aligned}
M_6 &= \frac{(3\lambda'_1 \Lambda^{-1} \lambda_2)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E \left[(\lambda'_1 \Lambda^{-1} \psi(z_i, \beta))^3 \right] \\
&= \frac{(3\lambda'_1 \Lambda^{-1} \lambda_2)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E \left[(\lambda'_1 \Lambda^{-1} u_0)^3 \right] \\
&= \frac{(3\lambda'_1 \Lambda^{-1} \lambda_2)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E \left[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) \right] \\
&= \frac{(3\lambda'_1 \Lambda^{-1} \lambda_2)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (\lambda'_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1)
\end{aligned}$$

■

Lemma 17

$$M_7 = \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1$$

Proof. As in the proof of Lemma 11, we can obtain

$$\begin{aligned} M_7 &= \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E \left[(\lambda'_1 \Lambda^{-1} \psi(z_i, \beta))^2 (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \psi(z_i, \beta)) \right] \\ &= \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E \left[(\lambda'_1 \Lambda^{-1} u_0)^2 (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0) \right] \\ &= \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E \left[(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) \right] \\ &= \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1 \end{aligned}$$

■

Lemma 18

$$M_8 = -\frac{2(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (\lambda'_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1)$$

Proof. As in the proof of Lemma 11, we can obtain

$$\begin{aligned} M_8 &= -\frac{2(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E \left[(\lambda'_1 \Lambda^{-1} \psi(z_i, \beta))^3 \right] \\ &= -\frac{2(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E \left[(\lambda'_1 \Lambda^{-1} u_0)^3 \right] \\ &= -\frac{2(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E \left[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) \right] \\ &= -\frac{2(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (\lambda'_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1) \end{aligned}$$

■

2.4 Term (4)

We now provide a detailed analysis of (4). Write

$$\frac{1}{2} \left(\bar{T}_2 + \bar{T}_1 \cdot \tilde{T}_2 \right) = \sum_{k=1}^7 S_k$$

where

$$\begin{aligned}
S_1 &\equiv -\frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} (w'_{1,n} \Lambda^{-1} w_n) \\
S_2 &\equiv \frac{1}{\lambda'_1 \Lambda^{-1} \lambda_1} (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} w_n) \\
S_3 &\equiv \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} (\lambda'_1 \Lambda^{-1} w_{1,n}) (\lambda'_1 \Lambda^{-1} w_n) \\
S_4 &\equiv \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} (\lambda'_2 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\
S_5 &\equiv -\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n) \\
S_6 &\equiv \left(-\frac{3\lambda'_1 \Lambda^{-1} \lambda_2}{2(\lambda'_1 \Lambda^{-1} \lambda_1)^3} + \frac{\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} \right) (\lambda'_1 \Lambda^{-1} w_n)^2 \\
S_7 &\equiv -\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} (\lambda'_1 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} w_n)
\end{aligned}$$

We then have

Theorem 6

$$E \left[\left(\frac{1}{2} (\bar{T}_2 + \bar{T}_1 \cdot \tilde{T}_2) \right)^2 \right] = \sum_{k=1}^7 E [S_k^2] + 2 \sum_{k < k'} E [S_k S_{k'}]$$

Lemma 19

$$E [S_1^2] = M_9 + O(n^{-1}),$$

where

$$M_9 = \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \left((\text{trace}(\Lambda^{-1} \Gamma_{0,1}))^2 + \text{trace}(\Lambda^{-1} \Gamma_{1,1}) + \text{trace}(\Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \Gamma_{0,1}) \right)$$

Proof. As in Donald and Newey (1998), we use the fact that for a pair of double arrays, say $\{A_{ij}^1\}$ and $\{A_{ij}^2\}$, we have

$$\begin{aligned}
\sum_{i=1}^n \sum_{j=1}^n A_{ij}^1 \sum_{i=1}^n \sum_{j=1}^n A_{ij}^2 &= \sum_{i=1}^n A_{ii}^1 A_{ii}^2 + \sum_{i=1}^n \sum_{j \neq i} A_{ii}^1 A_{jj}^2 \\
&\quad + \sum_{i=1}^n \sum_{j \neq i} A_{ij}^1 A_{ij}^2 + \sum_{i=1}^n \sum_{j \neq i} A_{ij}^1 A_{ji}^2 + \dots
\end{aligned}$$

where the omitted terms will not be needed for our calculations because they will have zero expectations in our context. It therefore follows that

$$\begin{aligned}
M_9 &\equiv \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [(u'_1 \Lambda^{-1} u_0) (v'_1 \Lambda^{-1} v_0)] \\
&\quad + \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [(u'_1 \Lambda^{-1} v_0) (u'_1 \Lambda^{-1} v_0)] \\
&\quad + \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E [(u'_1 \Lambda^{-1} v_0) (v'_1 \Lambda^{-1} u_0)]
\end{aligned}$$

Now note that

$$E[(u'_1 \Lambda^{-1} u_0) (v'_1 \Lambda^{-1} v_0)] = (E[u'_1 \Lambda^{-1} u_0])^2 = (\text{trace}(\Lambda^{-1} \Gamma_{0,1}))^2$$

$$\begin{aligned} E[(u'_1 \Lambda^{-1} v_0) (u'_1 \Lambda^{-1} v_0)] &= E[(u'_1 \Lambda^{-1} v_0) (v'_0 \Lambda^{-1} u_1)] = E[u'_1 \Lambda^{-1} v_0 v'_0 \Lambda^{-1} u_1] \\ &= E[u'_1 \Lambda^{-1} u_1] = \text{trace}(\Lambda^{-1} \Gamma_{1,1}) \end{aligned}$$

and

$$\begin{aligned} E[(u'_1 \Lambda^{-1} v_0) (v'_1 \Lambda^{-1} u_0)] &= E[u'_1 \Lambda^{-1} E[v_0 v'_1] \Lambda^{-1} u_0] = \text{trace}(\Lambda^{-1} E[u_0 u'_1] \Lambda^{-1} E[u_0 u'_1]) \\ &= \text{trace}(\Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \Gamma_{0,1}) \end{aligned}$$

■

Lemma 20

$$E[S_2^2] = M_{10} + O(n^{-1}),$$

where

$$M_{10} \equiv \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} \left((\text{trace}(\Upsilon_{0,0}))^2 + \Xi_{0,0} + \text{trace}(\Upsilon_{0,0} \Upsilon_{0,0}) \right)$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned} M_{10} &\equiv \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} V_0 \Lambda^{-1} v_0)] \\ &\quad + \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} v_0)] \\ &\quad + \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} V_0 \Lambda^{-1} u_0)] \end{aligned}$$

Note that

$$\begin{aligned} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} V_0 \Lambda^{-1} v_0)] &= (E[\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} u_0])^2 \\ &= (E[\text{trace}(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} u_0)])^2 \\ &= (E[\text{trace}(u_0 \lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1})])^2 \\ &= ([\text{trace}(E[u_0 \lambda'_1 \Lambda^{-1} U_0] \Lambda^{-1})])^2 \\ &= ([\text{trace}(\Upsilon_{0,0})])^2 \end{aligned}$$

$$\begin{aligned} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} v_0)] &= E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} v_0) (v'_0 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1)] \\ &= E[\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} v_0 v'_0 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1] \\ &= E[\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1] \end{aligned}$$

and

$$\begin{aligned} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} V_0 \Lambda^{-1} u_0)] &= E[\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} E[v_0 \lambda'_1 \Lambda^{-1} V_0] \Lambda^{-1} u_0] \\ &= E[\text{trace}(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} E[v_0 \lambda'_1 \Lambda^{-1} V_0] \Lambda^{-1} u_0)] \\ &= E[\text{trace}(u_0 \lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} E[v_0 \lambda'_1 \Lambda^{-1} V_0] \Lambda^{-1})] \\ &= \text{trace}(E[u_0 \lambda'_1 \Lambda^{-1} U_0] \Lambda^{-1} E[v_0 \lambda'_1 \Lambda^{-1} V_0] \Lambda^{-1}) \\ &= \text{trace}(E[u_0 \lambda'_1 \Lambda^{-1} U_0] \Lambda^{-1} E[u_0 \lambda'_1 \Lambda^{-1} U_0] \Lambda^{-1}) \\ &= \text{trace}(\Upsilon_{0,0} \Upsilon_{0,0}) \end{aligned}$$

■

Lemma 21

$$E [S_3^2] = M_{11} + O(n^{-1}),$$

where

$$M_{11} \equiv \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} \left(2 (\lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1)^2 + (\lambda'_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} \Gamma_{1,1} \Lambda^{-1} \lambda_1) \right)$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned} M_{11} &\equiv \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E [(\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_1) (\lambda'_1 \Lambda^{-1} v_0)] \\ &+ \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E [(\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} v_0)] \\ &+ \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E [(\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_1) (\lambda'_1 \Lambda^{-1} u_0)] \end{aligned}$$

Now note that

$$\begin{aligned} E [(\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_1) (\lambda'_1 \Lambda^{-1} v_0)] &= (E [(\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} u_0)])^2 = (\lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1)^2 \\ E [(\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} v_0)] &= E [(\lambda'_1 \Lambda^{-1} u_1)^2] E [(\lambda'_1 \Lambda^{-1} v_0)^2] \\ &= (\lambda'_1 \Lambda^{-1} \lambda_1) \cdot E [(\lambda'_1 \Lambda^{-1} u_1)^2] \\ &= (\lambda'_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} \Gamma_{1,1} \Lambda^{-1} \lambda_1) \end{aligned}$$

and

$$E [(\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_1) (\lambda'_1 \Lambda^{-1} u_0)] = (E [(\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} u_0)])^2 = (\lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1)^2$$

■

Lemma 22

$$E [S_4^2] = M_{12} + O(n^{-1}),$$

where

$$M_{12} \equiv \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} \left(2 (\lambda'_1 \Lambda^{-1} \lambda_2)^2 + (\lambda'_1 \Lambda^{-1} \lambda_1) (\lambda'_2 \Lambda^{-1} \lambda_2) \right)$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned} M_{12} &\equiv \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E [(\lambda'_2 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_2 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] \\ &+ \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E [(\lambda'_2 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_2 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] \\ &+ \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E [(\lambda'_2 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_2 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0)] \end{aligned}$$

Now note that

$$\begin{aligned}
E [(\lambda'_2 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_2 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] &= (E [(\lambda'_2 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0)])^2 \\
&= (\lambda'_1 \Lambda^{-1} \lambda_2)^2
\end{aligned}$$

$$\begin{aligned}
E [(\lambda'_2 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_2 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] \\
= E [(\lambda'_2 \Lambda^{-1} u_0)^2] E [(\lambda'_1 \Lambda^{-1} v_0)^2] = (\lambda'_1 \Lambda^{-1} \lambda_1) \cdot E [(\lambda'_2 \Lambda^{-1} u_0)^2] \\

$$2[S_1 S_6] = M_{20} + O(n^{-1}),$$

where

$$M_{20} \equiv \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (3\lambda'_1 \Lambda^{-1} \lambda_2 - 2\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) (\text{trace}(\Lambda^{-1} \Gamma_{0,1}) (\lambda'_1 \Lambda^{-1} \lambda_1) + 2(\lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1))$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned} M_{20} &\equiv \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (3\lambda'_1 \Lambda^{-1} \lambda_2 - 2\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) E[(u'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] \\ &+ \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (3\lambda'_1 \Lambda^{-1} \lambda_2 - 2\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] \\ &+ \frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (3\lambda'_1 \Lambda^{-1} \lambda_2 - 2\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0)] \end{aligned}$$

Now note that

$$\begin{aligned} E[(u'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] &= E[(u'_1 \Lambda^{-1} u_0)] E[(\lambda'_1 \Lambda^{-1} v_0)^2] = \text{trace}(\Lambda^{-1} \Gamma_{0,1}) (\lambda'_1 \Lambda^{-1} \lambda_1) \\ E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] &= E[(\lambda'_1 \Lambda^{-1} u_0) (u'_1 \Lambda^{-1} v_0) (v'_0 \Lambda^{-1} \lambda_1)] \\ &= E[(\lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} v_0) (v'_0 \Lambda^{-1} \lambda_1)] \\ &= \lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1 \end{aligned}$$

and

$$\begin{aligned} E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0)] &= E[(\lambda'_1 \Lambda^{-1} u_0) (u'_1 \Lambda^{-1} v_0) (v'_0 \Lambda^{-1} \lambda_1)] \\ &= E[(\lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} v_0) (v'_0 \Lambda^{-1} \lambda_1)] \\ &= \lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1 \end{aligned}$$

■

Lemma 31

$$2[S_1 S_7] = M_{21} + O(n^{-1}),$$

where

$$M_{21} \equiv \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\text{trace}(\Lambda^{-1} \Gamma_{0,1}) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) + \lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1 + \lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1)$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned} M_{21} &\equiv \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E[(u'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\ &+ \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\ &+ \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0)] \end{aligned}$$

Now note that

$$\begin{aligned} E[(u'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] &= E[(u'_1 \Lambda^{-1} u_0)] E[(\lambda'_1 \Lambda^{-1} v_0) (v'_0 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)] \\ &= \text{trace}(\Lambda^{-1} \Gamma_{0,1}) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) \end{aligned}$$

$$\begin{aligned} E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] &= E[(\lambda'_1 \Lambda^{-1} u_0) (u'_1 \Lambda^{-1} v_0) (v'_0 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)] \\ &= E[\lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} v_0 v'_0 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1] \\ &= \lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1 \end{aligned}$$

and

$$\begin{aligned} E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0)] &= E[(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0) (u'_1 \Lambda^{-1} v_0) (v'_0 \Lambda^{-1} \lambda_1)] \\ &= E[\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} v_0 v'_0 \Lambda^{-1} \lambda_1] \\ &= \lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1 \end{aligned}$$

■

Lemma 32

$$2[S_2 S_3] = M_{22} + O(n^{-1}),$$

where

$$M_{22} = \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} ((\lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1) \text{trace}(\Upsilon_{0,0}) + \lambda'_1 \Lambda^{-1} \Upsilon_{1,0} \lambda_1 + \lambda'_1 \Lambda^{-1} \Upsilon_{0,0} \Gamma_{0,1} \Lambda^{-1} \lambda_1)$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned} M_{22} &= \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_1) (\lambda'_1 \Lambda^{-1} v_0)] \\ &\quad + \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_1) (\lambda'_1 \Lambda^{-1} v_0)] \\ &\quad + \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_1) (\lambda'_1 \Lambda^{-1} u_0)] \end{aligned}$$

Lemma 45

$$2[S_5 S_7] = M_{35} + O(n^{-1}),$$

where

$$M_{35} = \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (2(\lambda'_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) + (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1) (\lambda'_1 \Lambda^{-1} \lambda_1))$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned} M_{35} &= \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\ &\quad + \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\ &\quad + \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0)] \end{aligned}$$

Now note that

$$\begin{aligned}
& E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\
&= E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} u_0)] E[(\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\
&= (\lambda'_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) \\
&\quad E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\
&= E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} u_0)] E[(\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\
&= (\lambda'_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)
\end{aligned}$$

and

$$\begin{aligned}
& E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0)] \\
&= E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0)] E[(\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] \\
&= (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1) (\lambda'_1 \Lambda^{-1} \lambda_1)
\end{aligned}$$

■

Lemma 46

$$2[S_6 S_7] = M_{36} + O(n^{-1}),$$

where

$$M_{36} = -\frac{3}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (-3\lambda'_1 \Lambda^{-1} \lambda_2 + 2\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned}
M_{36} &= -\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} (-3\lambda'_1 \Lambda^{-1} \lambda_2 + 2\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\
&\quad -\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} (-3\lambda'_1 \Lambda^{-1} \lambda_2 + 2\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\
&\quad -\frac{1}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} (-3\lambda'_1 \Lambda^{-1} \lambda_2 + 2\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0)]
\end{aligned}$$

Now note that

$$\begin{aligned}
& E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\
&= E[(\lambda'_1 \Lambda^{-1} u_0)^2] E[(\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\
&= (\lambda'_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) \\
&\quad E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\
&= E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0)] E[(\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0)] \\
&= (\lambda'_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)
\end{aligned}$$

and

$$\begin{aligned}
& E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0)] \\
&= E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0)] E[(\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] \\
&= (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} \lambda_1)
\end{aligned}$$

■

2.5 Term (5)

We now provide a detailed analysis of (5). We need to calculate the expectation of

$$\frac{1}{3}\overline{T}_1 \cdot \overline{T}_3 + \frac{1}{3}(\overline{T}_1)^2 \cdot \tilde{T}_{3,1} + \frac{1}{3}\overline{T}_1^3 \cdot \tilde{T}_{3,2} + \frac{1}{3}\overline{T}_1 \cdot \overline{T}_2 \cdot \tilde{T}_{3,3} + \frac{1}{3}(\overline{T}_1)^2 \cdot \tilde{T}_2 \cdot \tilde{T}_{3,3}$$

We first note that

$$\frac{1}{3}\overline{T}_1 \cdot \overline{T}_3 = \sum_{k=1}^{31} A_k$$

where

$$\begin{aligned} A_1 &\equiv -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} (w'_{1,n} \Lambda^{-1} W_n \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\ A_2 &\equiv \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^2} (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} W_n \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\ A_3 &\equiv -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\lambda'_1 \Lambda^{-1} w_{1,n}) (w'_{1,n} \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\ A_4 &\equiv \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\lambda'_1 \Lambda^{-1} w_{1,n}) (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\ A_5 &\equiv -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\lambda'_2 \Lambda^{-1} w_n) (w'_{1,n} \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\ A_6 &\equiv \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\lambda'_2 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\ A_7 &\equiv \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} \lambda_1) (w'_{1,n} \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\ A_8 &\equiv -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\ A_9 &\equiv -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (w'_{1,n} \Lambda^{-1} w_{1,n}) (\lambda'_1 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\ A_{10} &\equiv -\frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (w'_{2,n} \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \end{aligned}$$

$$\begin{aligned}
A_{11} &\equiv \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} w_{1,n}) (\lambda'_1 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\

Lemma 101

$$E[A_{55}] = -\frac{6}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) + O(n^{-1})$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned} E[A_{55}] &= -\frac{2(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] \\ &\quad -\frac{2(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] \\ &\quad -\frac{2(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0)] + O(n^{-1}) \end{aligned}$$

Now note that

$$E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] = (\lambda'_1 \Lambda^{-1} \lambda_1)^2$$

■

Lemma 102

$$E[A_{56}] = \frac{3}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\lambda'_1 \Lambda^{-1} \Lambda_2 \Lambda^{-1} \lambda_1) + O(n^{-1})$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned} E[A_{56}] &= \frac{(\lambda'_1 \Lambda^{-1} \Lambda_2 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] \\ &\quad + \frac{(\lambda'_1 \Lambda^{-1} \Lambda_2 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] \\ &\quad + \frac{(\lambda'_1 \Lambda^{-1} \Lambda_2 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0)] + O(n^{-1}) \end{aligned}$$

Now note that

$$E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] = (\lambda'_1 \Lambda^{-1} \lambda_1)^2$$

■

Lemma 103

$$E[A_{57}] = \frac{6}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)^2$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned} E[A_{57}] &= \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^6} (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)^2 E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] \\ &\quad + \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^6} (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)^2 E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] \\ &\quad + \frac{2}{(\lambda'_1 \Lambda^{-1} \lambda_1)^6} (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)^2 E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0)] + O(n^{-1}) \end{aligned}$$

Now note that

$$E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] = (\lambda'_1 \Lambda^{-1} \lambda_1)^2$$

■

We also have

$$\frac{1}{3} \bar{T}_1 \cdot \bar{T}_2 \cdot \tilde{T}_{3,3} = \sum_{k=58}^{69} A_k$$

where

$$\begin{aligned}
A_{58} &\equiv \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (w'_{1,n} \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\
A_{59} &\equiv -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (w'_{1,n} \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n)^2 \\
A_{60} &\equiv -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n) \\
A_{61} &\equiv \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n)^2 \\
A_{62} &\equiv -\frac{8}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (\lambda'_1 \Lambda^{-1} w_{1,n}) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n)^2 \\
A_{63} &\equiv \frac{8}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} (\lambda'_1 \Lambda^{-1} w_{1,n}) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n)^3 \\
A_{64} &\equiv -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (\lambda'_2 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} w_n)^2 \\
A_{65} &\equiv \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} (\lambda'_2 \Lambda^{-1} w_n) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n)^3 \\
A_{66} &\equiv \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n)^2 (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} w_n) \\
A_{67} &\equiv -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} (\lambda'_1 \Lambda^{-1} W_n \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} w_n)^3 \\
A_{68} &\equiv \frac{6}{(\lambda'_1 \Lambda^{-1} \lambda_1)^5} (\lambda'_1 \Lambda^{-1} \lambda_2) (\lambda'_1 \Lambda^{-1} w_n)^3 (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} w_n) \\
A_{69} &\equiv -\frac{6}{(\lambda'_1 \Lambda^{-1} \lambda_1)^6} (\lambda'_1 \Lambda^{-1} \lambda_2) (\lambda'_1 \Lambda^{-1} w_n)^4 (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)
\end{aligned}$$

Lemma 104

$$\begin{aligned}
&E[A_{58}] \\
&= \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\text{trace}(\Lambda^{-1} \Gamma_{0,1}) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) + (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1) + (\lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)) + O(n^{-1})
\end{aligned}$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned}
E[A_{58}] &= \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E[(u'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] \\
&\quad + \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] \\
&\quad + \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0)] + O(n^{-1})
\end{aligned}$$

Now note that

$$E[(u'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] = \text{trace}(\Lambda^{-1} \Gamma_{0,1}) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)$$

$$\begin{aligned}
E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] &= E[(u'_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0)] \\
&= E[(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0) (u'_1 \Lambda^{-1} \lambda_1)] \\
&= \lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1
\end{aligned}$$

and

$$\begin{aligned}
E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0)] &= E[(u'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} u_0)] \\
&= E[(\lambda'_1 \Lambda^{-1} u_0) (u'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)] \\
&= \lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1
\end{aligned}$$

■

Lemma 105

$$E[A_{59}] = -\frac{4(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (\text{trace}(\Lambda^{-1} \Gamma_{0,1}) (\lambda'_1 \Lambda^{-1} \lambda_1) + 2(\lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1)) + O(n^{-1})$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned}
E[A_{59}] &= -\frac{4(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E[(u'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] \\
&\quad -\frac{4(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] \\
&\quad -\frac{4(\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0)] + O(n^{-1})
\end{aligned}$$

Now note that

$$\begin{aligned}
E[(u'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] &= \text{trace}(\Lambda^{-1} \Gamma_{0,1}) (\lambda'_1 \Lambda^{-1} \lambda_1) \\
E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] &= E[(u'_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} u_0)] = \lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1
\end{aligned}$$

and

$$E[(u'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0)] = E[(u'_1 \Lambda^{-1} \lambda_1) (\lambda'_1 \Lambda^{-1} u_0)] = \lambda'_1 \Lambda^{-1} \Gamma_{0,1} \Lambda^{-1} \lambda_1$$

■

Lemma 106

$$E[A_{60}] = -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} (\text{trace}(\Upsilon_{0,0}) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1) + (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \Upsilon_{0,0} \lambda_1) + (\lambda'_1 \Lambda^{-1} \Upsilon_{0,0} \Lambda_1 \Lambda^{-1} \lambda_1)) + O(n^{-1})$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned}
E[A_{60}] &= -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] \\
&\quad -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] \\
&\quad -\frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^3} E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0)] + O(n^{-1})
\end{aligned}$$

Now note that

$$\begin{aligned}
& E[(\lambda'_1 \Lambda^{-1} U_0 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] \\

Lemma 119

$$E[A_{73}] = \frac{12}{(\lambda'_1 \Lambda^{-1} \lambda_1)^4} (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)^2 + O(n^{-1})$$

Proof. As in Lemma 19, we obtain

$$\begin{aligned} E[A_{73}] &= \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^6} (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)^2 E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] \\ &\quad + \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^6} (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)^2 E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0)] \\ &\quad + \frac{4}{(\lambda'_1 \Lambda^{-1} \lambda_1)^6} (\lambda'_1 \Lambda^{-1} \Lambda_1 \Lambda^{-1} \lambda_1)^2 E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} u_0)] + O(n^{-1}) \end{aligned}$$

Now note that

$$E[(\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} u_0) (\lambda'_1 \Lambda^{-1} v_0) (\lambda'_1 \Lambda^{-1} v_0)] = (\lambda'_1 \Lambda^{-1} \lambda_1)^2$$

■

3 GMM Estimation and Dynamic Panel Model with Fixed Effects ($T=4$)

We now assume that our model is generated by

$$\begin{aligned} y_{it} &= \alpha_i + \beta y_{it-1} + \varepsilon_{it} \quad t = 1, \dots, T \\ \varepsilon_{it} &\sim N(0, 1) \\ y_{i0} &\sim N\left(\frac{\alpha_i}{1-\beta}, \frac{1}{1-\beta^2}\right) \\ \alpha_i &\sim N(0, 1) \end{aligned}$$

We will assume that

$$T = 4$$

3.1 Ahn and Schmidt

Ahn and Schmidt propose following moment restrictions

$$\begin{aligned} E[y_{is}((y_{it}-y_{it-1})-\beta(y_{it-1}-y_{is-1}))] &= 0 & t = 2, \dots, T : s = 0, \dots, t-2 \\ E[(y_{iT}-\beta y_{iT-1})((y_{it}-y_{it-1})-\beta(y_{it-1}-y_{it-2}))] &= 0 & t = 2, \dots, T-1 \end{aligned}$$

Therefore, we have

$$\frac{T(T-1)}{2} + T - 2 = \frac{1}{2}T^2 + \frac{1}{2}T - 2 = \frac{1}{2}(4)^2 + \frac{1}{2}(4) - 2 = 8$$

moment restrictions:

$$\psi(z_i, c) = \begin{bmatrix} y_{i,0}((y_{i,2}-y_{i,1})-c(y_{i,1}-y_{i,0})) \\ y_{i,0}((y_{i,3}-y_{i,2})-c(y_{i,2}-y_{i,1})) \\ y_{i,1}((y_{i,3}-y_{i,2})-c(y_{i,2}-y_{i,1})) \\ y_{i,0}((y_{i,4}-y_{i,3})-c(y_{i,3}-y_{i,2})) \\ y_{i,1}((y_{i,4}-y_{i,3})-c(y_{i,3}-y_{i,2})) \\ y_{i,2}((y_{i,4}-y_{i,3})-c(y_{i,3}-y_{i,2})) \\ (y_{i,4}-cy_{i,3})((y_{i,2}-y_{i,1})-c(y_{i,1}-y_{i,0})) \\ (y_{i,4}-cy_{i,3})((y_{i,3}-y_{i,2})-c(y_{i,2}-y_{i,1})) \end{bmatrix}$$

3.2 Blundell and Bond

Blundell and Bond propose following moment restrictions

$$\begin{aligned} E[y_{is}((y_{it}-y_{it-1})-\beta(y_{it-1}-y_{is-1}))] &= 0 & t = 2, \dots, T : s = 0, \dots, t-2 \\ E[(y_{it}-\beta y_{it-1})(y_{it-1}-y_{it-2})] &= 0 & t = 2, \dots, T \end{aligned}$$

Therefore, we have

$$\frac{T(T-1)}{2} + T - 1 = \frac{1}{2}T^2 + \frac{1}{2}T - 1 = \frac{1}{2}(4)^2 + \frac{1}{2}(4) - 1 = 9$$

moment restrictions:

$$\psi(z_i, c) = \begin{bmatrix} y_{i,0}((y_{i,2}-y_{i,1})-c(y_{i,1}-y_{i,0})) \\ y_{i,0}((y_{i,3}-y_{i,2})-c(y_{i,2}-y_{i,1})) \\ y_{i,1}((y_{i,3}-y_{i,2})-c(y_{i,2}-y_{i,1})) \\ y_{i,0}((y_{i,4}-y_{i,3})-c(y_{i,3}-y_{i,2})) \\ y_{i,1}((y_{i,4}-y_{i,3})-c(y_{i,3}-y_{i,2})) \\ y_{i,2}((y_{i,4}-y_{i,3})-c(y_{i,3}-y_{i,2})) \\ (y_{i,2}-cy_{i,1})(y_{i,1}-y_{i,0}) \\ (y_{i,3}-cy_{i,2})(y_{i,2}-y_{i,1}) \\ (y_{i,4}-cy_{i,3})(y_{i,3}-y_{i,2}) \end{bmatrix}$$

3.3 Long Difference

Long difference note that

$$(y_{iT}-y_{i,1})-\beta(y_{iT-1}-y_{i,0})=\varepsilon_{iT}-\varepsilon_{i1}$$

is orthogonal to

$$\begin{aligned}
& y_{i,0} \\
y_{i,2} - \beta y_{i,1} &= \alpha_i + \varepsilon_{i,2} \\
& \vdots \\
y_{i,T-1} - \beta y_{i,T-2} &= \alpha_i + \varepsilon_{i,T-1}
\end{aligned}$$

In other words, it considers the moment restrictions

$$\begin{aligned}
E[y_{i,0}((y_{iT} - y_{i1}) - \beta(y_{iT-1} - y_{i0}))] &= 0 \\
E[(y_{i,s} - \beta y_{i,s-1})((y_{iT} - y_{i1}) - \beta(y_{iT-1} - y_{i0}))] &= 0, \quad s = 2, \dots, T-1
\end{aligned}$$

We therefore have

$$1 + T - 2 = T - 1 = 4 - 1 = 3$$

moment restrictions:

$$\psi(z_i, c) = \begin{bmatrix} y_{i,0}((y_{i,4} - y_{i,1}) - c(y_{i,3} - y_{i,0})) \\ (y_{i,2} - cy_{i,1})((y_{i,4} - y_{i,1}) - c(y_{i,3} - y_{i,0})) \\ (y_{i,3} - cy_{i,2})((y_{i,4} - y_{i,1}) - c(y_{i,3} - y_{i,0})) \end{bmatrix}$$

1 Iterated 2SLS

We consider 2SLS

$$b = \left[\left(\sum_{i=1}^n x_i \hat{z}'_i \right) \left(\sum_{i=1}^n \hat{z}_i \hat{z}'_i \right)^{-1} \left(\sum_{i=1}^n \hat{z}_i x_i \right) \right]^{-1} \left(\sum_{i=1}^n x_i \hat{z}'_i \right) \left(\sum_{i=1}^n \hat{z}_i \hat{z}'_i \right)^{-1} \left(\sum_{i=1}^n \hat{z}_i y_i \right) \quad (1)$$

applied to the single equation

$$y_i = \beta x_i + \varepsilon_i \quad (2)$$

using instrument $\hat{z}_i = z_i - \frac{1}{\sqrt{n}} \hat{\theta} w_i$, where $\hat{\theta} = \sqrt{n} (\hat{\beta} - \beta)$. Here, z_i is the “proper” instrument, and $\hat{\beta}$ is a preliminary estimator for β . We assume that

$$\hat{\theta} = F_n + \frac{1}{\sqrt{n}} Q_n + \frac{1}{n} S_n + o_p \left(\frac{1}{n} \right) \quad (3)$$

where

$$F_n = \frac{1}{\sqrt{n}} \sum_{i=1}^n f_i$$

for some f_i i.i.d. with mean zero, $Q_n = O_p(1)$, and $S_n = O_p(1)$. Below in Theorem 1, we derive an expansion of the form

$$\sqrt{n} (b - \beta) = R_0 + \frac{1}{\sqrt{n}} R_1 + \frac{1}{n} R_2 + o_p \left(\frac{1}{n} \right) \quad (4)$$

where

$$\begin{aligned} R_0 &\equiv \frac{N_0}{D_0} \\ R_1 &\equiv -\frac{D_1 N_0}{D_0^2} + \frac{N_1}{D_0} \\ R_2 &\equiv -\frac{D_2 N_0}{D_0^2} + \frac{D_1^2 N_0}{D_0^3} + \frac{N_2}{D_0} - \frac{D_1 N_1}{D_0^2} \end{aligned}$$

where R s depend on (F_n, Q_n, S_n) .

We therefore can see that the higher order bias of b is given by¹

$$\frac{1}{n}E[R_1]$$

which can be stochastically approximated by

$$\frac{1}{n}\widehat{E}[R_1]$$

where

$$\widehat{E}[R_1] = \frac{1}{J} \sum_{j=1}^J R_{1j}$$

for J large. We can also see that the expected value of $(b - \beta)^2$ is approximately equal to

$$\frac{1}{n}E[R_0^2] + \frac{2}{n\sqrt{n}}E[R_0R_1] + \frac{1}{n^2}E[R_1^2] + \frac{2}{n^2}E[R_0R_2]$$

which can be stochastically approximated by

$$\frac{1}{n}\widehat{E}[R_0^2] + \frac{2}{n\sqrt{n}}\widehat{E}[R_0R_1] + \frac{1}{n^2}\widehat{E}[R_1^2] + \frac{2}{n^2}\widehat{E}[R_0R_2]$$

where

$$\begin{aligned}\widehat{E}[R_0^2] &= \frac{1}{J} \sum_{j=1}^J R_{0j}^2 \\ \widehat{E}[R_0R_1] &= \frac{1}{J} \sum_{j=1}^J R_{0j}R_{1j} \\ \widehat{E}[R_1^2] &= \frac{1}{J} \sum_{j=1}^J R_{1j}^2 \\ \widehat{E}[R_0R_2] &= \frac{1}{J} \sum_{j=1}^J R_{0j}R_{2j}\end{aligned}$$

for J large.

2 Expansion

We present an expansion for 2SLS using instrument $\widehat{z}_i = z_i - \frac{1}{\sqrt{n}}\widehat{\theta}w_i$. We have

$$\sqrt{n}(b - \beta) = \frac{\left(\frac{1}{n} \sum_{i=1}^n \widehat{z}_i x_i\right)' \left(\frac{1}{n} \sum_{i=1}^n \widehat{z}_i \widehat{z}_i'\right)^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n \widehat{z}_i \varepsilon_i\right)}{\left(\frac{1}{n} \sum_{i=1}^n \widehat{z}_i x_i\right)' \left(\frac{1}{n} \sum_{i=1}^n \widehat{z}_i \widehat{z}_i'\right)^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n \widehat{z}_i x_i\right)} \quad (5)$$

Definition 1

$$\begin{aligned}\lambda &\equiv E[z_i x_i] \\ \Lambda &\equiv E[z_i z_i'] \\ \phi &\equiv E[w_i x_i] \\ \Delta &\equiv E[w_i z_i' + z_i w_i'] \\ \Omega &\equiv E[w_i w_i'] \\ \varphi &\equiv E[w_i \varepsilon_i]\end{aligned}$$

¹It can be verified that $E[R_0] = 0$.

Lemma 1

$$\frac{1}{n} \sum_{i=1}^n \hat{z}_i x_i = \lambda + \frac{1}{\sqrt{n}} A_1 + \frac{1}{n} A_2 + o_p \left(\frac{1}{n} \right)$$

where

$$\begin{aligned} A_1 &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i x_i - \lambda) - F_n \phi = \sqrt{n} \left(\frac{1}{n} Z' x - \lambda \right) - F_n \phi \\ A_2 &\equiv -F_n \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i x_i - \phi) \right) - Q_n \phi \\ &= -\sqrt{n} F_n \left(\frac{1}{n} W' x - \phi \right) - Q_n \phi \end{aligned}$$

Proof. We have

$$\begin{aligned} \frac{1}{n} \sum_{i=1}^n \hat{z}_i x_i &= \frac{1}{n} \sum_{i=1}^n \left(z_i - \frac{1}{\sqrt{n}} \hat{\theta} w_i \right) x_i \\ &= \frac{1}{n} \sum_{i=1}^n z_i x_i - \frac{1}{\sqrt{n}} \hat{\theta} \left(\frac{1}{n} \sum_{i=1}^n w_i x_i \right) \end{aligned}$$

Because

$$\frac{1}{n} \sum_{i=1}^n z_i x_i = \lambda + \frac{1}{\sqrt{n}} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i x_i - \lambda) \right)$$

and

$$\begin{aligned} &\hat{\theta} \left(\frac{1}{n} \sum_{i=1}^n w_i x_i \right) \\ &= \left(F_n + \frac{1}{\sqrt{n}} Q_n + \frac{1}{n} S_n + o_p \left(\frac{1}{n} \right) \right) \left(\phi + \frac{1}{\sqrt{n}} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i x_i - \phi) \right) \right) \\ &= F_n \phi \\ &\quad + \frac{1}{\sqrt{n}} F_n \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i x_i - \phi) \right) + \frac{1}{\sqrt{n}} Q_n \phi \\ &\quad + o_p \left(\frac{1}{\sqrt{n}} \right), \end{aligned}$$

we obtain

$$\begin{aligned} &\frac{1}{n} \sum_{i=1}^n \left(z_i - \frac{1}{\sqrt{n}} \hat{\theta} w_i \right) x_i \\ &= \lambda \\ &\quad + \frac{1}{\sqrt{n}} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i x_i - \lambda) \right) - \frac{1}{\sqrt{n}} F_n \phi \\ &\quad - \frac{1}{n} F_n \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i x_i - \phi) \right) - \frac{1}{n} Q_n \phi \\ &\quad + o_p \left(\frac{1}{n} \right) \end{aligned}$$

■

Lemma 2

$$\frac{1}{n} \sum_{i=1}^n \widehat{z}_i \widehat{z}'_i = \Lambda + \frac{1}{\sqrt{n}} L_1 + \frac{1}{n} L_2 + o_p \left(\frac{1}{n} \right)$$

where

$$\begin{aligned} L_1 &\equiv \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i z'_i - \Lambda) \right) - F_n \Delta \\ &= \sqrt{n} \left(\frac{1}{n} Z' Z - \Lambda \right) - F_n \Delta \\ L_2 &\equiv -Q_n \Delta - F_n \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i z'_i + z_i w'_i - \Delta) \right) + F_n^2 \Omega \\ &= -Q_n \Delta - \sqrt{n} F_n \left(\frac{1}{n} Z' W + \frac{1}{n} W' Z - \Delta \right) + F_n^2 \Omega \end{aligned}$$

Proof. We have

$$\begin{aligned} \frac{1}{n} \sum_{i=1}^n \widehat{z}_i \widehat{z}'_i &= \frac{1}{n} \sum_{i=1}^n \left(z_i - \frac{1}{\sqrt{n}} \widehat{\theta} w_i \right) \left(z_i - \frac{1}{\sqrt{n}} \widehat{\theta} w_i \right)' \\ &= \frac{1}{n} \sum_{i=1}^n z_i z'_i - \frac{1}{\sqrt{n}} \widehat{\theta} \left(\frac{1}{n} \sum_{i=1}^n (w_i z'_i + z_i w'_i) \right) + \frac{1}{n} \widehat{\theta}^2 \left(\frac{1}{n} \sum_{i=1}^n w_i w'_i \right) \end{aligned}$$

Because

$$\begin{aligned} &\frac{1}{n} \sum_{i=1}^n z_i z'_i = \Lambda + \frac{1}{\sqrt{n}} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i z'_i - \Lambda) \right) \\ &\widehat{\theta} \left(\frac{1}{n} \sum_{i=1}^n (w_i z'_i + z_i w'_i) \right) \\ &= \left(F_n + \frac{1}{\sqrt{n}} Q_n + \frac{1}{n} S_n + o_p \left(\frac{1}{n} \right) \right) \left(\Delta + \frac{1}{\sqrt{n}} \frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i z'_i + z_i w'_i - \Delta) \right) \\ &= F_n \Delta \\ &+ \frac{1}{\sqrt{n}} Q_n \Delta + \frac{1}{\sqrt{n}} F_n \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i z'_i + z_i w'_i - \Delta) \right) \\ &+ o_p \left(\frac{1}{\sqrt{n}} \right), \end{aligned}$$

and

$$\begin{aligned} &\widehat{\theta}^2 \left(\frac{1}{n} \sum_{i=1}^n w_i w'_i \right) \\ &= \left(F_n + \frac{1}{\sqrt{n}} Q_n + \frac{1}{n} S_n + o_p \left(\frac{1}{n} \right) \right)^2 \left(\Omega + \frac{1}{n} \sum_{i=1}^n (w_i w'_i - \Omega) \right) \\ &= F_n^2 \Omega + o_p(1), \end{aligned}$$

we have

$$\begin{aligned}
& \frac{1}{n} \sum_{i=1}^n \left(z_i - \frac{1}{\sqrt{n}} \hat{\theta} w_i \right) \left(z_i - \frac{1}{\sqrt{n}} \hat{\theta} w_i \right)' \\
= & \Lambda \\
& + \frac{1}{\sqrt{n}} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i z'_i - \Lambda) \right) - \frac{1}{\sqrt{n}} F_n \Delta \\
& - \frac{1}{n} Q_n \Delta - \frac{1}{n} F_n \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i z'_i + z_i w'_i - \Delta) \right) \\
& + \frac{1}{n} F_n^2 \Omega \\
& + o_p \left(\frac{1}{n} \right)
\end{aligned}$$

■

Lemma 3

$$\left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i \hat{z}'_i \right)^{-1} = \Lambda^{-1} + \frac{1}{\sqrt{n}} M_1 + \frac{1}{n} M_2 + o_p \left(\frac{1}{n} \right)$$

where

$$\begin{aligned}
M_1 & \equiv -\Lambda^{-1} L_1 \Lambda^{-1} \\
& = -\Lambda^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i z'_i - \Lambda) \right) \Lambda^{-1} + F_n \Lambda^{-1} \Delta \Lambda^{-1} \\
M_2 & \equiv \Lambda^{-1} L_1 \Lambda^{-1} L_1 \Lambda^{-1} - \Lambda^{-1} L_2 \Lambda^{-1} \\
& = \Lambda^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i z'_i - \Lambda) \right) \Lambda^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i z'_i - \Lambda) \right) \Lambda^{-1} \\
& \quad - F_n \Lambda^{-1} \Delta \Lambda^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i z'_i - \Lambda) \right) \Lambda^{-1} - F_n \Lambda^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i z'_i - \Lambda) \right) \Lambda^{-1} \Delta \Lambda^{-1} \\
& \quad + F_n^2 \Lambda^{-1} \Delta \Lambda^{-1} \Delta \Lambda^{-1} \\
& \quad + Q_n \Lambda^{-1} \Delta \Lambda^{-1} \\
& \quad + F_n \Lambda^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i z'_i + z_i w'_i - \Delta) \right) \Lambda^{-1} \\
& \quad - F_n^2 \Lambda^{-1} \Omega \Lambda^{-1}
\end{aligned}$$

Note that

$$M_1 = -\sqrt{n} \Lambda^{-1} \left(\frac{1}{n} Z' Z - \Lambda \right) \Lambda^{-1} + F_n \Lambda^{-1} \Delta \Lambda^{-1}$$

and

$$\begin{aligned}
M_2 &= n\Lambda^{-1} \left(\frac{1}{n} Z'Z - \Lambda \right) \Lambda^{-1} \left(\frac{1}{n} Z'Z - \Lambda \right) \Lambda^{-1} \\
&\quad - \sqrt{n} F_n \Lambda^{-1} \Delta \Lambda^{-1} \left(\frac{1}{n} Z'Z - \Lambda \right) \Lambda^{-1} \\
&\quad - \sqrt{n} F_n \Lambda^{-1} \left(\frac{1}{n} Z'Z - \Lambda \right) \Lambda^{-1} \Delta \Lambda^{-1} \\
&\quad + F_n^2 \Lambda^{-1} \Delta \Lambda^{-1} \Delta \Lambda^{-1} \\
&\quad + Q_n \Lambda^{-1} \Delta \Lambda^{-1} \\
&\quad + \sqrt{n} F_n \Lambda^{-1} \left(\frac{1}{n} Z'W + \frac{1}{n} W'Z - \Delta \right) \Lambda^{-1} \\
&\quad - F_n^2 \Lambda^{-1} \Omega \Lambda^{-1}
\end{aligned}$$

Proof. From Lemma 2, we obtain

$$\begin{aligned}
\left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i \hat{z}_i' \right)^{-1} &= \left(\Lambda + \frac{1}{\sqrt{n}} L_1 + \frac{1}{n} L_2 + o_p \left(\frac{1}{n} \right) \right)^{-1} \\
&= \Lambda^{-1} - \frac{1}{\sqrt{n}} \Lambda^{-1} L_1 \Lambda^{-1} + \frac{1}{n} (\Lambda^{-1} L_1 \Lambda^{-1} L_1 \Lambda^{-1} - \Lambda^{-1} L_2 \Lambda^{-1}) + o_p \left(\frac{1}{n} \right)
\end{aligned}$$

■

Lemma 4

$$\frac{1}{\sqrt{n}} \sum_{i=1}^n \hat{z}_i \varepsilon_i = C_0 + \frac{1}{\sqrt{n}} C_1 + \frac{1}{n} C_2 + o_p \left(\frac{1}{n} \right)$$

where

$$\begin{aligned}
C_0 &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n z_i \varepsilon_i - F_n \varphi \\
&= \frac{1}{\sqrt{n}} Z' \varepsilon - F_n \varphi \\
C_1 &\equiv -F_n \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i \varepsilon_i - \varphi) \right) - Q_n \varphi \\
&= -\sqrt{n} F_n \left(\frac{1}{n} W' \varepsilon - \varphi \right) - Q_n \varphi \\
C_2 &\equiv -Q_n \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i \varepsilon_i - \varphi) \right) - S_n \varphi \\
&= -\sqrt{n} Q_n \left(\frac{1}{n} W' \varepsilon - \varphi \right) - S_n \varphi
\end{aligned}$$

Proof. We have

$$\frac{1}{\sqrt{n}} \sum_{i=1}^n \hat{z}_i \varepsilon_i = \frac{1}{\sqrt{n}} \sum_{i=1}^n \left(z_i - \frac{1}{\sqrt{n}} \hat{\theta} w_i \right) \varepsilon_i = \frac{1}{\sqrt{n}} \sum_{i=1}^n z_i \varepsilon_i - \hat{\theta} \left(\frac{1}{n} \sum_{i=1}^n w_i \varepsilon_i \right)$$

Because

$$\begin{aligned}
\hat{\theta} \left(\frac{1}{n} \sum_{i=1}^n w_i \varepsilon_i \right) &= \left(F_n + \frac{1}{\sqrt{n}} Q_n + \frac{1}{n} S_n + o_p \left(\frac{1}{n} \right) \right) \left(\varphi + \frac{1}{\sqrt{n}} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i \varepsilon_i - \varphi) \right) \right) \\
&= F_n \varphi \\
&\quad + \frac{1}{\sqrt{n}} F_n \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i \varepsilon_i - \varphi) \right) + \frac{1}{\sqrt{n}} Q_n \varphi \\
&\quad + \frac{1}{n} Q_n \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i \varepsilon_i - \varphi) \right) + \frac{1}{n} S_n \varphi \\
&\quad + o_p \left(\frac{1}{n} \right)
\end{aligned}$$

we obtain

$$\begin{aligned}
&\frac{1}{\sqrt{n}} \sum_{i=1}^n \left(z_i - \frac{1}{\sqrt{n}} \hat{\theta} w_i \right) \varepsilon_i \\
&= \frac{1}{\sqrt{n}} \sum_{i=1}^n z_i \varepsilon_i - F_n \varphi \\
&\quad - \frac{1}{\sqrt{n}} F_n \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i \varepsilon_i - \varphi) \right) - \frac{1}{\sqrt{n}} Q_n \varphi \\
&\quad - \frac{1}{n} Q_n \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (w_i \varepsilon_i - \varphi) \right) - \frac{1}{n} S_n \varphi \\
&\quad + o_p \left(\frac{1}{n} \right)
\end{aligned}$$

■

Lemma 5

$$\left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i x_i \right)' \left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i \hat{z}'_i \right)^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n \hat{z}_i \varepsilon_i \right) = N_0 + \frac{1}{\sqrt{n}} N_1 + \frac{1}{n} N_2 + o_p \left(\frac{1}{n} \right)$$

where

$$\begin{aligned}
N_0 &\equiv \lambda' \Lambda^{-1} C_0 \\
N_1 &\equiv \lambda' \Lambda^{-1} C_1 + \lambda' M_1 C_0 + A'_1 \Lambda^{-1} C_0 \\
N_2 &\equiv A'_1 M_1 C_0 + \lambda' \Lambda^{-1} C_2 + \lambda' M_2 C_0 + \lambda' M_1 C_1 + A'_1 \Lambda^{-1} C_1 + A'_2 \Lambda^{-1} C_0
\end{aligned}$$

Proof. From Lemmas 1, 3, and 4, we obtain

$$\begin{aligned}
&\left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i x_i \right)' \left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i \hat{z}'_i \right)^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n \hat{z}_i \varepsilon_i \right) \\
&= \left(\lambda + \frac{1}{\sqrt{n}} A_1 + \frac{1}{n} A_2 + o_p \left(\frac{1}{n} \right) \right)' \left(\Lambda^{-1} + \frac{1}{\sqrt{n}} M_1 + \frac{1}{n} M_2 + o_p \left(\frac{1}{n} \right) \right) \left(C_0 + \frac{1}{\sqrt{n}} C_1 + \frac{1}{n} C_2 + o_p \left(\frac{1}{n} \right) \right) \\
&= \lambda' \Lambda C_0 \\
&\quad + \frac{1}{\sqrt{n}} (\lambda' \Lambda C_1 + \lambda' M_1 C_0 + A'_1 \Lambda C_0) \\
&\quad + \frac{1}{n} (A'_1 M_1 C_0 + \lambda' \Lambda C_2 + \lambda' M_2 C_0 + \lambda' M_1 C_1 + A'_1 \Lambda C_1 + A'_2 \Lambda C_0)
\end{aligned}$$

■

Lemma 6

$$\left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i x_i \right)' \left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i \hat{z}'_i \right)^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n \hat{z}_i x_i \right) = D_0 + \frac{1}{\sqrt{n}} D_1 + \frac{1}{n} D_2 + o_p \left(\frac{1}{n} \right)$$

where

$$\begin{aligned} D_0 &\equiv \lambda' \Lambda^{-1} \lambda \\ D_1 &\equiv 2\lambda' \Lambda^{-1} A_1 + \lambda' M_1 \lambda \\ D_2 &\equiv 2\lambda' \Lambda^{-1} A_2 + 2\lambda' M_1 A_1 + \lambda' M_2 \lambda + A'_1 \Lambda^{-1} A_1 \end{aligned}$$

Proof. From Lemmas 1, and 3, we obtain

$$\begin{aligned} & \left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i x_i \right)' \left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i \hat{z}'_i \right)^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n \hat{z}_i x_i \right) \\ &= \left(\lambda + \frac{1}{\sqrt{n}} A_1 + \frac{1}{n} A_2 + o_p \left(\frac{1}{n} \right) \right)' \left(\Lambda^{-1} + \frac{1}{\sqrt{n}} M_1 + \frac{1}{n} M_2 + o_p \left(\frac{1}{n} \right) \right) \left(\lambda + \frac{1}{\sqrt{n}} A_1 + \frac{1}{n} A_2 + o_p \left(\frac{1}{n} \right) \right) \\ &= \lambda' \Lambda^{-1} \lambda \\ &+ \frac{1}{\sqrt{n}} (\lambda' \Lambda^{-1} A_1 + \lambda' M_1 \lambda + A'_1 \Lambda^{-1} \lambda) \\ &+ \frac{1}{n} (A'_1 M_1 \lambda + \lambda' \Lambda^{-1} A_2 + \lambda' M_2 \lambda + \lambda' M_1 A_1 + A'_1 \Lambda^{-1} A_1 + A'_2 \Lambda^{-1} \lambda) \end{aligned}$$

■

Theorem 1

$$\sqrt{n} (b - \beta) = R_0 + \frac{1}{\sqrt{n}} R_1 + \frac{1}{n} R_2 + o_p \left(\frac{1}{n} \right)$$

where

$$\begin{aligned} R_0 &\equiv \frac{N_0}{D_0} \\ R_1 &\equiv -\frac{D_1 N_0}{D_0^2} + \frac{N_1}{D_0} \\ R_2 &\equiv -\frac{D_2 N_0}{D_0^2} + \frac{D_1^2 N_0}{D_0^3} + \frac{N_2}{D_0} - \frac{D_1 N_1}{D_0^2} \end{aligned}$$

Proof. From Lemmas 5 and 6, we obtain

$$\begin{aligned} \sqrt{n} (b - \beta) &= \frac{\left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i x_i \right)' \left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i \hat{z}'_i \right)^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n \hat{z}_i \varepsilon_i \right)}{\left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i x_i \right)' \left(\frac{1}{n} \sum_{i=1}^n \hat{z}_i \hat{z}'_i \right)^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n \hat{z}_i x_i \right)} \\ &= \frac{N_0 + \frac{1}{\sqrt{n}} N_1 + \frac{1}{n} N_2 + o_p \left(\frac{1}{n} \right)}{D_0 + \frac{1}{\sqrt{n}} D_1 + \frac{1}{n} D_2 + o_p \left(\frac{1}{n} \right)} \\ &= \frac{N_0}{D_0} + \frac{1}{\sqrt{n}} \left(-\frac{D_1 N_0}{D_0^2} + \frac{N_1}{D_0} \right) + \frac{1}{n} \left(-\frac{D_2 N_0}{D_0^2} + \frac{D_1^2 N_0}{D_0^3} + \frac{N_2}{D_0} - \frac{D_1 N_1}{D_0^2} \right) + o_p \left(\frac{1}{n} \right) \end{aligned}$$

■

3 Long Difference

$$y_{iT} - y_{i1} = \beta (y_{iT-1} - y_{i0}) + (\varepsilon_{iT} - \varepsilon_{i1}) \quad (6)$$

It is easy to see that the initial observation y_{i0} would serve as a valid instrument. Using similar intuition as in Hausman and Taylor (1983) or Ahn and Schmidt (1995), we can see that $y_{iT-1} - \beta y_{iT-2}, \dots, y_{i2} - \beta y_{i1}$ would be valid instruments as well. If we use a preliminary estimator $\hat{\beta}$, then we would use

$$\begin{aligned} \hat{z}_i &\equiv \begin{bmatrix} y_{i0} \\ y_{i2} - \hat{\beta} y_{i1} \\ \vdots \\ y_{iT-1} - \hat{\beta} y_{iT-2} \end{bmatrix} = \begin{bmatrix} y_{i0} \\ y_{i2} - \beta y_{i1} - (\hat{\beta} - \beta) y_{i1} \\ \vdots \\ y_{iT-1} - \beta y_{iT-2} - (\hat{\beta} - \beta) \beta y_{iT-2} \end{bmatrix} \\ &= \begin{bmatrix} y_{i0} \\ y_{i2} - \beta y_{i1} \\ \vdots \\ y_{iT-1} - \beta y_{iT-2} \end{bmatrix} - (\hat{\beta} - \beta) \begin{bmatrix} 0 \\ y_{i1} \\ \vdots \\ y_{iT-2} \end{bmatrix} = z_i - \frac{1}{\sqrt{n}} \hat{\theta} w_i \end{aligned}$$

as instrument, where

$$z_i \equiv \begin{bmatrix} y_{i0} \\ y_{i2} - \beta y_{i1} \\ \vdots \\ y_{iT-1} - \beta y_{iT-2} \end{bmatrix}, \quad w_i \equiv \begin{bmatrix} 0 \\ y_{i1} \\ \vdots \\ y_{iT-2} \end{bmatrix}, \quad \hat{\theta} = \sqrt{n} (\hat{\beta} - \beta)$$

In our context,

$$\begin{aligned} y_i &= y_{iT} - y_{i1} \\ x_i &= y_{iT-1} - y_{i0} \\ \varepsilon_i &= \varepsilon_{iT} - \varepsilon_{i1} \\ \\ \lambda &= E[z_i x_i] \\ \Lambda &= E[z_i z'_i] \\ \phi &= E[w_i x_i] \\ \Delta &= E[w_i z'_i + z_i w'_i] \\ \Omega &= E[w_i w'_i] \\ \varphi &= E[w_i \varepsilon_i] \end{aligned}$$

Now, suppose that

$$\begin{aligned} y_{it} &= \alpha_i + \beta y_{it-1} + \varepsilon_{it} \quad t = 1, \dots, T \\ \varepsilon_{it} &\sim \mathcal{N}(0, \sigma_\varepsilon^2), \quad \alpha_i \sim \mathcal{N}(0, \sigma_\alpha^2) \\ y_{i0} &\sim \mathcal{N}\left(\frac{\alpha_i}{1-\beta}, \frac{1}{1-\beta^2}\right) = \frac{\alpha_i}{1-\beta} + \frac{1}{\sqrt{1-\beta^2}} \mathcal{N}(0, 1) \end{aligned}$$

Further suppose that

$$\sigma_\varepsilon^2 = \sigma_\alpha^2 = 1, \quad T = 5$$

We then have the following results:

$$\lambda = \begin{bmatrix} -\beta^2 - 1 \\ \beta^2 \\ \beta \\ 1 \end{bmatrix}$$

$$\Lambda = \begin{bmatrix} \frac{2}{(1-\beta^2)(1-\beta)} & \frac{1}{1-\beta} & \frac{1}{1-\beta} & \frac{1}{1-\beta} \\ \frac{1}{1-\beta} & 2 & 1 & 1 \\ \frac{1}{1-\beta} & 1 & 2 & 1 \\ \frac{1}{1-\beta} & 1 & 1 & 2 \end{bmatrix}$$

$$\phi = \begin{bmatrix} 0 \\ -\beta \\ 0 \\ \beta \end{bmatrix}$$

$$\Delta = \begin{bmatrix} 0 & -\frac{\beta^2 - 2\beta - 1}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^3 - \beta^2 - \beta - 1}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^4 - \beta^3 - \beta - 1}{(-1+\beta^2)(-1+\beta)} \\ -\frac{\beta^2 - 2\beta - 1}{(-1+\beta^2)(-1+\beta)} & -\frac{2}{-1+\beta} & -\frac{3+\beta}{-1+\beta} & -\frac{-2-\beta+\beta^2}{-1+\beta} \\ -\frac{\beta^3 - \beta^2 - \beta - 1}{(-1+\beta^2)(-1+\beta)} & -\frac{3+\beta}{-1+\beta} & -\frac{2}{-1+\beta} & -\frac{-3+\beta}{-1+\beta} \\ -\frac{\beta^4 - \beta^3 - \beta - 1}{(-1+\beta^2)(-1+\beta)} & -\frac{2-\beta+\beta^2}{-1+\beta} & -\frac{3+\beta}{-1+\beta} & -\frac{2}{-1+\beta} \end{bmatrix}$$

$$\Omega = \begin{bmatrix} 0 & 0 & 0 & 0 \\ 0 & \frac{2}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^2 - 2\beta - 1}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^3 - \beta^2 - \beta - 1}{(-1+\beta^2)(-1+\beta)} \\ 0 & -\frac{\beta^2 - 2\beta - 1}{(-1+\beta^2)(-1+\beta)} & \frac{2}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^2 - 2\beta - 1}{(-1+\beta^2)(-1+\beta)} \\ 0 & -\frac{\beta^3 - \beta^2 - \beta - 1}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^2 - 2\beta - 1}{(-1+\beta^2)(-1+\beta)} & \frac{2}{(-1+\beta^2)(-1+\beta)} \end{bmatrix}$$

$$\varphi = \begin{bmatrix} 0 \\ -1 \\ -\beta \\ -\beta^2 \end{bmatrix}$$

Higher Order Expansion of Arellano-Bover Estimator for Dynamic Panel Model with Fixed Effects: Supplementary Appendix for “Long Difference Instrumental Variables Estimation for Dynamic Panel Models with Fixed Effects”

Jinyong Hahn

Jerry Hausman

Guido Kuersteiner

June, 2002

1 Arellano-Bover Estimator for Dynamic Panel Model with Fixed Effects

Consider the usual dynamic panel model with fixed effects:

$$y_{it} = \alpha_i + \beta y_{i,t-1} + \varepsilon_{it}, \quad i = 1, \dots, n; \quad t = 1, \dots, T \quad (1)$$

We consider a version of the GMM estimator developed by Arellano and Bover (1995), which simplifies the characterization of the “weight matrix” in GMM estimation. We define the innovation $u_{it} \equiv \alpha_i + \varepsilon_{it}$. Arellano and Bover (1995) eliminate the fixed effect α_i in (1) by applying Helmert’s transformation

$$u_{it}^* \equiv \sqrt{\frac{T-t}{T-t+1}} \left[u_{it} - \frac{1}{T-t} (u_{i,t+1} + \dots + u_{iT}) \right], \quad t = 1, \dots, T-1$$

instead of first differencing. The transformation produces

$$y_{it}^* = \beta x_{it}^* + \varepsilon_{it}^*, \quad t = 1, \dots, T-1$$

where $x_{i,t}^* \equiv y_{i,t-1}^*$. Let $z_{it}^* \equiv (y_{i0}, \dots, y_{it-1})'$. Our moment restriction is summarized by

$$E[z_{i,t}^* \varepsilon_{i,t}^*] = 0 \quad t = 1, \dots, T-1$$

It can be shown that, with the homoscedasticity assumption on ε_{it} , the optimal “weight matrix” is proportional to a block-diagonal matrix, with typical diagonal block equal to $E[z_{i,t}^* z_{i,t}^{*'}]$. Therefore, the optimal GMM estimator by Arellano-Bover is equal to

$$\hat{b}_{AB} \equiv \frac{\sum_{t=1}^{T-1} x_t^{*'} P_t y_t^*}{\sum_{t=1}^{T-1} x_t^{*'} P_t x_t^*}$$

so that

$$\sqrt{n} (\hat{b}_{AB} - \beta) \equiv \frac{\sum_{t=1}^{T-1} \left(\frac{1}{\sqrt{n}} x_t^{*'} P_t^* \varepsilon_t^* \right)}{\sum_{t=1}^{T-1} \left(\frac{1}{n} x_t^{*'} P_t^* x_t^* \right)} \quad (2)$$

where $x_t^* \equiv (x_{1,t}^*, \dots, x_{n,t}^*)'$, $y_t^* \equiv (y_{1,t}^*, \dots, y_{n,t}^*)'$, $Z_t^* \equiv (z_{1,t}^*, \dots, z_{n,t}^*)'$, and $P_t^* \equiv Z_t^* (Z_t^{*\prime} Z_t^*)^{-1} Z_t^{*\prime}$. In Theorem 1 below, we provide an approximation of the form

$$\sqrt{n} (\hat{b}_{AB} - \beta) = F_n + \frac{1}{\sqrt{n}} Q_n + \frac{1}{n} S_n + o_p \left(\frac{1}{n} \right).$$

2 Higher Order Expansion of $\sqrt{n} (\hat{b}_{AB} - \beta)$

We now adopt obvious notations, and make a second order analysis of the right side of (2). Recall that

$$\sqrt{n} (\hat{b}_{AB} - \beta) \equiv \frac{\sum_{t=1}^{T-1} \left(\frac{1}{\sqrt{n}} x_t^{*\prime} P_t^* \varepsilon_t^* \right)}{\sum_{t=1}^{T-1} \left(\frac{1}{n} x_t^{*\prime} P_t^* x_t^* \right)}$$

where $z_{it}^* \equiv (y_{i0}, \dots, y_{it-1})'$, $x_t^* \equiv (x_{1t}^*, \dots, x_{nt}^*)'$, $y_t^* \equiv (y_{1t}^*, \dots, y_{nt}^*)'$, $Z_t^* \equiv (z_{1t}^*, \dots, z_{nt}^*)'$, and $P_t^* \equiv Z_t^* (Z_t^{*\prime} Z_t^*)^{-1} Z_t^{*\prime}$. The higher order expansion for $\sqrt{n} (\hat{b}_{AB} - \beta)$ is contained in Theorem 1 below.

Definition 1

$$\begin{aligned} \lambda_t^* &\equiv E [z_{i,t}^* x_{i,t}^*] \\ \Lambda_t^* &\equiv E [z_{i,t}^* z_{i,t}^{*\prime}] \end{aligned}$$

Definition 2

$$\begin{aligned} A_{1,t}^* &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (z_{i,t}^* x_{i,t}^* - \lambda_t^*) \\ &= \sqrt{n} \left(\frac{1}{n} Z_t^{*\prime} x_t^* - \lambda_t^* \right) \quad (= O_p(1)) \end{aligned}$$

Definition 3

$$\begin{aligned} M_{1,t}^* &\equiv -\Lambda_t^{*-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_{i,t}^* z_{i,t}^{*\prime} - \Lambda_t^*) \right) \Lambda_t^{*-1} \\ &= -\sqrt{n} \Lambda_t^{*-1} \left(\frac{1}{n} Z_t^{*\prime} Z_t^* - \Lambda_t^* \right) \Lambda_t^{*-1} \quad (= O_p(1)) \end{aligned}$$

$$\begin{aligned} M_{2,t}^* &\equiv \Lambda_t^{*-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_{i,t}^* z_{i,t}^{*\prime} - \Lambda_t^*) \right) \Lambda_t^{*-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_{i,t}^* z_{i,t}^{*\prime} - \Lambda_t^*) \right) \Lambda_t^{*-1} \\ &= n \Lambda_t^{*-1} \left(\frac{1}{n} Z_t^{*\prime} Z_t^* - \Lambda_t^* \right) \Lambda_t^{*-1} \left(\frac{1}{n} Z_t^{*\prime} Z_t^* - \Lambda_t^* \right) \Lambda_t^{*-1} \quad (= O_p(1)) \end{aligned}$$

Definition 4

$$\begin{aligned} C_{0,t}^* &\equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n z_{i,t}^* \varepsilon_{i,t}^* \\ &= \frac{1}{\sqrt{n}} Z_t^{*\prime} \varepsilon_t^* \quad (= O_p(1)) \end{aligned}$$

Lemma 1

$$\frac{1}{\sqrt{n}}x_t^{*\prime}P_t^*\varepsilon_t^* = N_{0,t}^* + \frac{1}{\sqrt{n}}N_{1,t}^* + \frac{1}{n}N_{2,t}^* + o_p\left(\frac{1}{n}\right)$$

where

$$\begin{aligned} N_{0,t}^* &\equiv \lambda_t^{*\prime}\Lambda_t^{*-1}C_{0,t}^* & (= O_p(1)) \\ N_{1,t}^* &\equiv \lambda_t^{*\prime}M_{1,t}^*C_{0,t}^* + A_{1,t}^{*\prime}\Lambda_t^{*-1}C_{0,t}^* & (= O_p(1)) \\ N_{2,t}^* &\equiv A_{1,t}^{*\prime}M_{1,t}^*C_{0,t}^* + \lambda_t^{*\prime}M_{2,t}^*C_{0,t}^* & (= O_p(1)) \end{aligned}$$

Proof. Note that

$$\frac{1}{\sqrt{n}}x_t^{*\prime}P_t^*\varepsilon_t^* = \left(\frac{1}{n}\sum_{i=1}^n z_{it}^*x_{it}^*\right)' \left(\frac{1}{n}\sum_{i=1}^n z_{it}^*z_{it}^{*\prime}\right)^{-1} \left(\frac{1}{\sqrt{n}}\sum_{i=1}^n z_{it}^*\varepsilon_{it}^*\right)$$

The conclusion then follows by an argument as in Lemma 7. ■

Lemma 2

$$\frac{1}{n}x_t^{*\prime}P_t^*x_t^* = D_{0,t}^* + \frac{1}{\sqrt{n}}D_{1,t}^* + \frac{1}{n}D_{2,t}^* + o_p\left(\frac{1}{n}\right)$$

where

$$\begin{aligned} D_{0,t}^* &\equiv \lambda_t^{*\prime}\Lambda_t^{*-1}\lambda_t^* & (= O_p(1)) \\ D_{1,t}^* &\equiv 2\lambda_t^{*\prime}\Lambda_t^{*-1}A_{1,t}^* + \lambda_t^{*\prime}M_{1,t}^*\lambda_t^* & (= O_p(1)) \\ D_{2,t}^* &\equiv \lambda_t^{*\prime}M_{2,t}^*\lambda_t^* + 2\lambda_t^{*\prime}M_{1,t}^*A_{1,t}^* + A_{1,t}^{*\prime}\Lambda_t^{*-1}A_{1,t}^* & (= O_p(1)) \end{aligned}$$

Proof. Note that

$$\frac{1}{n}x_t^{*\prime}P_t^*x_t^* = \left(\frac{1}{n}\sum_{i=1}^n z_{it}^*x_{it}^*\right)' \left(\frac{1}{n}\sum_{i=1}^n z_{it}^*z_{it}^{*\prime}\right)^{-1} \left(\frac{1}{n}\sum_{i=1}^n z_{it}^*x_{it}^*\right)$$

The conclusion then follows by an argument as in Lemma 8. ■

Theorem 1

$$\sqrt{n}\left(\hat{b}_{AB} - \beta\right) = F_n + \frac{1}{\sqrt{n}}Q_n + \frac{1}{n}S_n + o_p\left(\frac{1}{n}\right),$$

where

$$\begin{aligned} F_n &\equiv \frac{N_0^*}{D_0^*} \\ Q_n &\equiv \frac{N_1^*}{D_0^*} - \frac{N_0^*D_1^*}{D_0^{*2}} \\ S_n &\equiv \frac{N_2^*}{D_0^*} - \frac{N_0^*D_2^*}{D_0^{*2}} - \frac{D_1^*N_1^*}{D_0^{*2}} + \frac{D_1^{*2}N_0^*}{D_0^{*3}} \end{aligned}$$

and

$$\begin{aligned} N_0^* &\equiv \sum_{t=1}^{T-1} N_{0,t}^* = O_p(1) & N_1^* \equiv \sum_{t=1}^{T-1} N_{1,t}^* = O_p(1) & N_2^* \equiv \sum_{t=1}^{T-1} N_{2,t}^* = O_p(1) \\ D_0^* &\equiv \sum_{t=1}^{T-1} D_{0,t}^* = O_p(1) & D_1^* \equiv \sum_{t=1}^{T-1} D_{1,t}^* = O_p(1) & D_2^* \equiv \sum_{t=1}^{T-1} D_{2,t}^* = O_p(1) \end{aligned}$$

Proof. From equation (2), and Lemmas 1 and 2, we obtain

$$\sqrt{n} \left(\hat{b}_{AB} - \beta \right) = \frac{N_0^* + \frac{1}{\sqrt{n}} N_1^* + \frac{1}{n} N_2^* + o_p \left(\frac{1}{n} \right)}{D_0^* + \frac{1}{\sqrt{n}} D_1^* + \frac{1}{n} D_2^* + o_p \left(\frac{1}{n} \right)}$$

■

3 Some simplification for stochastic approximation

Suppose that

$$\begin{aligned} y_{it} &= \alpha_i + \beta y_{it-1} + \varepsilon_{it} & t = 1, \dots, T \\ \varepsilon_{it} &\sim \mathcal{N}(0, \sigma_\varepsilon^2), & \alpha_i \sim \mathcal{N}(0, \sigma_\alpha^2) \\ y_{i0} &\sim \mathcal{N}\left(\frac{\alpha_i}{1-\beta}, \frac{1}{1-\beta^2}\right) = \frac{\alpha_i}{1-\beta} + \frac{1}{\sqrt{1-\beta^2}} \mathcal{N}(0, 1) \end{aligned}$$

Further suppose that

$$\sigma_\varepsilon^2 = \sigma_\alpha^2 = 1, \quad T = 5$$

We then have the following results:

$$\begin{aligned} \lambda_1^* &= \left[\frac{1}{10} (\beta^3 + 2\beta^2 + 3\beta + 4) \frac{\sqrt{5}}{\beta+1} \right] \\ \lambda_2^* &= \left[\frac{\frac{1}{6} (\beta^2 + 2\beta + 3) \sqrt{3} \frac{\beta}{\beta+1}}{\frac{1}{6} (\beta^2 + 2\beta + 3) \frac{\sqrt{3}}{\beta+1}} \right] \\ \lambda_3^* &= \left[\frac{\frac{1}{6} (\beta + 2) \sqrt{6} \frac{\beta^2}{\beta+1}}{\frac{1}{6} (\beta + 2) \sqrt{6} \frac{\beta}{\beta+1}} \right. \\ &\quad \left. \frac{\frac{1}{6} (\beta + 2) \frac{\sqrt{6}}{\beta+1}}{\frac{1}{6} (\beta + 2) \frac{\sqrt{6}}{\beta+1}} \right] \\ \lambda_4^* &= \left[\begin{array}{c} \frac{1}{2} \sqrt{2} \frac{\beta^3}{\beta+1} \\ \frac{1}{2} \sqrt{2} \frac{\beta^2}{\beta+1} \\ \frac{1}{2} \sqrt{2} \frac{\beta}{\beta+1} \\ \frac{1}{2} \frac{\sqrt{2}}{\beta+1} \end{array} \right] \\ \Lambda_1^* &= \left[\frac{2}{(-1+\beta^2)(-1+\beta)} \right] \\ \Lambda_2^* &= \left[\begin{array}{cc} \frac{2}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^2-2\beta-1}{(-1+\beta^2)(-1+\beta)} \\ -\frac{\beta^2-2\beta-1}{(-1+\beta^2)(-1+\beta)} & \frac{2}{(-1+\beta^2)(-1+\beta)} \end{array} \right] \\ \Lambda_3^* &= \left[\begin{array}{ccc} \frac{2}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^2-2\beta-1}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^3-\beta^2-\beta-1}{(-1+\beta^2)(-1+\beta)} \\ -\frac{\beta^2-2\beta-1}{(-1+\beta^2)(-1+\beta)} & \frac{2}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^2-2\beta-1}{(-1+\beta^2)(-1+\beta)} \\ -\frac{\beta^3-\beta^2-\beta-1}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^2-2\beta-1}{(-1+\beta^2)(-1+\beta)} & \frac{2}{(-1+\beta^2)(-1+\beta)} \end{array} \right] \\ \Lambda_4^* &= \left[\begin{array}{cccc} \frac{2}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^2-2\beta-1}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^3-\beta^2-\beta-1}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^4-\beta^3-\beta-1}{(-1+\beta^2)(-1+\beta)} \\ -\frac{\beta^2-2\beta-1}{(-1+\beta^2)(-1+\beta)} & \frac{2}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^2-2\beta-1}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^3-\beta^2-\beta-1}{(-1+\beta^2)(-1+\beta)} \\ -\frac{\beta^3-\beta^2-\beta-1}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^2-2\beta-1}{(-1+\beta^2)(-1+\beta)} & \frac{2}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^2-2\beta-1}{(-1+\beta^2)(-1+\beta)} \\ -\frac{\beta^4-\beta^3-\beta-1}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^3-\beta^2-\beta-1}{(-1+\beta^2)(-1+\beta)} & -\frac{\beta^2-2\beta-1}{(-1+\beta^2)(-1+\beta)} & \frac{2}{(-1+\beta^2)(-1+\beta)} \end{array} \right] \end{aligned}$$

A Digression: Some Useful Results Related to Higher Order Properties of 2SLS

We first make a digression to the discussion of single equation model,

$$\begin{aligned} y_i &= \beta x_i + \varepsilon_i, \\ x_i &= z'_i \pi + u_i \end{aligned}$$

The only reason we consider such analysis is because all the analysis we found in the literature are conditional analysis given instruments: They all assume that the instruments are nonstochastic. Our purpose is to make a “marginal” higher order analysis, which is more natural in the dynamic panel model context.

Definition 5

$$\begin{aligned} \lambda &\equiv E[z_i x_i] \\ \Lambda &\equiv E[z_i z'_i] \end{aligned}$$

Lemma 3

$$\frac{1}{n} \sum_{i=1}^n z_i x_i = \lambda + \frac{1}{\sqrt{n}} A_1$$

where

$$A_1 \equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i x_i - \lambda) = O_p(1)$$

Lemma 4

$$\frac{1}{n} \sum_{i=1}^n z_i z'_i = \Lambda + \frac{1}{\sqrt{n}} L_1$$

where

$$L_1 \equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i z'_i - \Lambda) = O_p(1)$$

Lemma 5

$$\left(\frac{1}{n} \sum_{i=1}^n z_i z'_i \right)^{-1} = \Lambda^{-1} + \frac{1}{\sqrt{n}} M_1 + \frac{1}{n} M_2 + o_p\left(\frac{1}{n}\right)$$

where

$$\begin{aligned} M_1 &\equiv -\Lambda^{-1} L_1 \Lambda^{-1} \\ &= -\Lambda^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i z'_i - \Lambda) \right) \Lambda^{-1} = O_p(1) \end{aligned}$$

$$\begin{aligned} M_2 &\equiv \Lambda^{-1} L_1 \Lambda^{-1} L_1 \Lambda^{-1} \\ &= \Lambda^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i z'_i - \Lambda) \right) \Lambda^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n (z_i z'_i - \Lambda) \right) \Lambda^{-1} = O_p(1) \end{aligned}$$

Lemma 6

$$\frac{1}{\sqrt{n}} \sum_{i=1}^n z_i \varepsilon_i = C_0$$

where

$$C_0 \equiv \frac{1}{\sqrt{n}} \sum_{i=1}^n z_i \varepsilon_i = O_p(1)$$

Lemma 7

$$\left(\frac{1}{n} \sum_{i=1}^n z_i x_i \right)' \left(\frac{1}{n} \sum_{i=1}^n z_i z'_i \right)^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n z_i \varepsilon_i \right) = \mathbb{N}_0 + \frac{1}{\sqrt{n}} \mathbb{N}_1 + \frac{1}{n} \mathbb{N}_2 + o_p\left(\frac{1}{n}\right)$$

where

$$\begin{aligned} \mathbb{N}_0 &\equiv \lambda' \Lambda^{-1} C_0 = O_p(1) \\ \mathbb{N}_1 &\equiv \lambda' M_1 C_0 + A'_1 \Lambda^{-1} C_0 = O_p(1) \\ \mathbb{N}_2 &\equiv A'_1 M_1 C_0 + \lambda' M_2 C_0 = O_p(1) \end{aligned}$$

Proof. From Lemmas 3, 5, and 6, we obtain

$$\begin{aligned} & \left(\frac{1}{n} \sum_{i=1}^n z_i x_i \right)' \left(\frac{1}{n} \sum_{i=1}^n z_i z'_i \right)^{-1} \left(\frac{1}{\sqrt{n}} \sum_{i=1}^n z_i \varepsilon_i \right) \\ &= \left(\lambda + \frac{1}{\sqrt{n}} A_1 \right)' \left(\Lambda^{-1} + \frac{1}{\sqrt{n}} M_1 + \frac{1}{n} M_2 + o_p\left(\frac{1}{n}\right) \right) C_0 \\ &= \lambda' \Lambda^{-1} C_0 + \frac{1}{\sqrt{n}} (\lambda' M_1 C_0 + A'_1 \Lambda^{-1} C_0) + \frac{1}{n} (A'_1 M_1 C_0 + \lambda' M_2 C_0) \end{aligned}$$

■

Lemma 8

$$\left(\frac{1}{n} \sum_{i=1}^n z_i x_i \right)' \left(\frac{1}{n} \sum_{i=1}^n z_i z'_i \right)^{-1} \left(\frac{1}{n} \sum_{i=1}^n z_i x_i \right) = \mathbb{D}_0 + \frac{1}{\sqrt{n}} \mathbb{D}_1 + \frac{1}{n} \mathbb{D}_2 + o_p\left(\frac{1}{n}\right)$$

where

$$\begin{aligned} \mathbb{D}_0 &\equiv \lambda' \Lambda^{-1} \lambda = O_p(1) \\ \mathbb{D}_1 &\equiv 2\lambda' \Lambda^{-1} A_1 + \lambda' M_1 \lambda = O_p(1) \\ \mathbb{D}_2 &\equiv \lambda' M_2 \lambda + 2\lambda' M_1 A_1 + A'_1 \Lambda^{-1} A_1 = O_p(1) \end{aligned}$$

Proof. From Lemmas 3, and 5, we obtain

$$\begin{aligned} & \left(\frac{1}{n} \sum_{i=1}^n z_i x_i \right)' \left(\frac{1}{n} \sum_{i=1}^n z_i z'_i \right)^{-1} \left(\frac{1}{n} \sum_{i=1}^n z_i x_i \right) \\ &= \left(\lambda + \frac{1}{\sqrt{n}} A_1 \right)' \left(\Lambda^{-1} + \frac{1}{\sqrt{n}} M_1 + \frac{1}{n} M_2 + o_p\left(\frac{1}{n}\right) \right) \left(\lambda + \frac{1}{\sqrt{n}} A_1 \right) \\ &= \lambda' \Lambda^{-1} \lambda \\ &+ \frac{1}{\sqrt{n}} (2\lambda' \Lambda^{-1} A_1 + \lambda' M_1 \lambda) \\ &+ \frac{1}{n} (\lambda' M_2 \lambda + 2\lambda' M_1 A_1 + A'_1 \Lambda^{-1} A_1) \end{aligned}$$

Alternative Parametrization of the Stationarity Property in Dynamic Panel Models with Weak Identification: Supplementary Appendix for “Long Difference Instrumental Variables Estimation for Dynamic Panel Models with Fixed Effects”

Jinyong Hahn

Jerry Hausman

Guido Kuersteiner

June, 2002

We consider the dynamic panel model

$$\begin{aligned}
 y_{it} &= (1 - \beta_n) \alpha_i + \beta_n y_{it-1} + \varepsilon_{it} \\
 \varepsilon_{it} &\sim N(0, \sigma_\varepsilon^2) \\
 \alpha_i &\sim N(0, \sigma_\alpha^2) \\
 y_{i0} &\sim N(\alpha_i, \frac{\sigma_y^2}{1 - \beta_n^2})
 \end{aligned} \tag{1}$$

where we assume that $t = 1, \dots, T$ and $i = 1, \dots, n$ with T being fixed and $n \rightarrow \infty$. We consider a sequence of generating measures indexed by $\beta_n = \exp(-c/n)$ for some constant $c > 0$. Note that $\beta_n^k = 1 - \frac{kc}{n} + o(n^{-1})$ for any constant k . We also define the innovation $u_{it} = \alpha_i + \varepsilon_{it}$. Let $\eta_{i0} = y_{i0} - \alpha_i$ such that

$$\begin{aligned}
 \Delta y_{it} &= -(\beta_n - 1) \beta_n^{t-1} \alpha_i + (\beta_n - 1) \sum_{s=1}^{t-1} \beta_n^{s-1} \varepsilon_{it-s} + (\beta_n - 1) \beta_n^{t-1} y_{i0} + \varepsilon_{it} \\
 &= (\beta_n - 1) \sum_{s=1}^{t-1} \beta_n^{s-1} \varepsilon_{it-s} + (\beta_n - 1) \beta_n^{t-1} \eta_{i0} + \varepsilon_{it}.
 \end{aligned}$$

We define $g_{i1}(\beta) = [u_{it} \Delta u_{is}(\beta), u_{iT} \Delta u_{ij}(\beta), \bar{u}_i \Delta u_{ik}(\beta)]'$ and $g_{i2}(\beta) = [\Delta u_i(\beta)' y_{i0}]$ such that

$$g_n(\beta) = n^{-3/2} \sum_{i=1}^n [g_{i1}(\beta)', g_{i2}(\beta)']'$$

with the optimal weight matrix $\Omega = \lim_n E g_n(\beta_n) g_n(\beta_n)'$. The infeasible 2SLS of a possibly transformed set of moment conditions then solves

$$\beta_{2SLS} = \arg \min_{\beta} g_n(\beta)' C (C' \Omega C)^+ C' g_n(\beta)$$

where C is $n \times r$ matrix for $1 \leq r \leq G$ such that C is of full column rank and $\text{rank}(C(C' \Omega C)^+ C') \geq 1$. We use Ω^+ to denote the Moore-Penrose inverse (see Magnus and Neudecker p. 32, 1988). We thus allow

the use of a singular weight matrix. Choosing r less than G allows to exclude certain moment conditions. We define the vectors

$$\begin{aligned} f_{i,1} &= [u_{it}\Delta y_{is-1}, u_{iT}\Delta y_{ij-1}, \bar{u}_i\Delta y_{ik-1}]' \\ f_{i,2} &= [\Delta y_{i1}y_{i0}, \dots, \Delta y_{iT-1}y_{i0}]' \end{aligned}$$

for $s = 2, \dots, T; t = 1, \dots, s-2; j = 2, \dots, T-1; k = 2, \dots, T$ and let $f_n = n^{-3/2} \sum_{i=1}^n [f'_{i1}, f'_{i2}]'$ such that the infeasible 2SLS estimator can be written as

$$\beta_{2SLS} - \beta_{n0} = (f'_n C (C' \Omega C)^+ C' f_n)^{-1} f'_n C (C' \Omega C)^+ C' g_n(\beta_{n0}). \quad (2)$$

Lemma 1 Assume $\beta_n = \exp(-c/n)$ for some $c > 0$. For T fixed and as $n \rightarrow \infty$

$$n^{-1} \sum_{i=1}^n f_{i,1} \xrightarrow{p} \mu_1, n^{-1} \sum_{i=1}^n g_{i,1}(\beta_0) \xrightarrow{p} 0$$

with $\mu'_1 = [0, \dots, 0, \sigma_\varepsilon^2 T^{-1} \mathbf{1}'_{T-1}]$ and

$$n^{-1} \sum_{i=1}^n [f'_{i,2}, g'_{i,2}(\beta_0)]' \xrightarrow{d} [\xi'_x, \xi'_y]'$$

where $[\xi'_x, \xi'_y] \sim N(\mu_2, \Sigma)$ with $\Sigma = \begin{bmatrix} \Sigma_{11} & \Sigma_{12} \\ \Sigma_{21} & \Sigma_{22} \end{bmatrix}$ where $\mu'_2 = [\mathbf{1}'_{T-1} \sigma_y^2 / 2, 0, \dots, 0]$ and $\Sigma_{11} = \delta I, \Sigma_{12} = \delta M_1, \Sigma_{22} = \delta M_2$ where $\delta = \frac{\sigma_y^2 \sigma_\varepsilon^2}{c}$,

$$M_1 = \begin{bmatrix} -1 & 1 & & 0 \\ & \ddots & \ddots & \\ & 0 & \ddots & 1 \\ & & & -1 \end{bmatrix}, M_2 = \begin{bmatrix} 2 & -1 & & 0 \\ -1 & \ddots & \ddots & \\ & \ddots & \ddots & -1 \\ & & -1 & 2 \end{bmatrix}$$

and $\Sigma_{12} = \Sigma'_{21}$.

An immediate consequence of this result is that an estimator based solely on the condition

$$E \bar{u}_i \Delta u_{ik}(\beta_0) = 0 \quad (3)$$

is consistent. If we consider estimators that do use all the moment conditions except (3) then we are in a situation where again the moment conditions in $g_{i1}(\beta)$ become asymptotically redundant. Now, however the limiting distribution of the non-redundant conditions has a noncentrality parameter.

More explicitly, if β_{2SLS} is the GMM estimator based on $g_{i2}(\beta)$ then it has the following nonstandard limiting distribution under the weak identification asymptotics adopted here

$$\beta_{2SLS} - \beta_0 \xrightarrow{d} \frac{(\mu + \xi_x)' C (C' \Omega C)^{-1} C' \xi_y}{(\mu + \xi_x)' C (C' \Omega C)^{-1} C' (\mu + \xi_x)} = X$$

where $\mu = -\mathbf{1}_{T-1} \sigma_y^2 / 2$. It turns out that this limiting distribution is the same as the one obtained when $\beta = \exp(-c/\sqrt{n})$ as is shown in a separate Appendix. There we carry out some numerical calculations which indicate that this limiting distribution leads to small biases and does not capture the type of issues we are most concerned with.

Proof of Lemma (1). Consider $E f_{i,1}$ with

$$\begin{aligned} Eu_{it}\Delta y_{is-1} &= Eu_{it} \left[(\beta_n - 1) \beta_n^{s-2} \eta_{i0} + \varepsilon_{is-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \right] \\ &= (\beta_n - 1) \beta_n^{t-s-1} \sigma_\varepsilon^2 = O(n^{-1}) \end{aligned}$$

and $\text{Var}(u_{it}\Delta y_{is-1}) = Eu_{it}^2 (\Delta y_{is-1})^2 - (\beta_n - 1)^2 \beta_n^{2(s-t)} \sigma_\varepsilon^4$ where

$$\begin{aligned} Eu_{it}^2 (\Delta y_{is-1})^2 &= \beta_n^{2(s-2)} (\sigma_\varepsilon^2 + (1 - \beta_n)^2 \sigma_\alpha^2) \frac{\sigma_y^2 (\beta_n - 1)^2}{1 - \beta_n^2} + (\sigma_\varepsilon^2 + (1 - \beta_n)^2 \sigma_\alpha^2) \sigma_\varepsilon^2 \\ &\quad + (\beta_n - 1)^2 (\sigma_\varepsilon^2 + (1 - \beta_n)^2 \sigma_\alpha^2) \sigma_\varepsilon^2 \sum_{r=1}^{s-2} \beta_n^{2(r-1)} + 2(\beta_n - 1)^2 \sigma_\varepsilon^4 \beta^{2(s+1-t)} \end{aligned}$$

such that $\text{Var}(u_{it}\Delta y_{is-1}) = \sigma_\varepsilon^4 + O(n^{-1})$. By independence of $u_{it}\Delta y_{is-1}$ across i it follows by the Markov inequality that $P(|n^{-1} (\sum_{i=1}^n u_{it}\Delta y_{is-1} - Eu_{it}\Delta y_{is-1})| > \epsilon) \leq \frac{n^{-1}(\sigma_\varepsilon^2 + \sigma_\alpha^2)\sigma_\varepsilon^2 + o(n^{-1})}{\epsilon}$ for any $\epsilon > 0$ which shows that $n^{-1} \sum_{i=1}^n (u_{it}\Delta y_{is-1} - Eu_{it}\Delta y_{is-1}) = o_p(1)$. Since $n^{-1} \sum_{i=1}^n Eu_{it}\Delta y_{is-1} = O(n^{-1/2})$ it follows that $n^{-1} \sum_{i=1}^n u_{it}\Delta y_{is-1} = o_p(1)$. For $\bar{u}_i \Delta y_{is-1}$ note that

$$\frac{1}{T} E \left[\sum_{t=1}^T u_{it} \left((\beta_n - 1) \beta_n^{s-2} \eta_{i0} + \varepsilon_{is-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \right) \right] = \frac{\sigma_\varepsilon^2}{T} + \frac{\sigma_\varepsilon^2 (\beta_n - 1)}{T} \sum_{t=1}^{s-1} \beta_n^{r-1}$$

and

$$\begin{aligned} E \left[T^{-1} \sum_{t=1}^T u_{it} \left((\beta_n - 1) \beta_n^{s-2} \eta_{i0} + \varepsilon_{is-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \right) \right]^2 \\ = (\beta_n - 1)^2 \beta_n^{2(s-2)} T^{-2} E \left(\sum_{t=1}^T u_{it} \right)^2 \eta_{i0}^2 + T^{-2} E \left(\sum_{t=1}^T u_{it} \right)^2 \varepsilon_{is-1}^2 \\ + 2(\beta_n - 1) T^{-2} E \left(\sum_{t=1}^T u_{it} \right)^2 \varepsilon_{is-1} \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \\ + \frac{(\beta_n - 1)^2}{T^2} E \sum_{t,s=1}^T u_{it} u_{is} \sum_{q,r=1}^{k-2} \beta_n^{r-1} \beta^{q-1} \varepsilon_{ik-1-q} \varepsilon_{ik-1-r} \\ = \beta_n^{2(s-2)} T^{-2} (T^2 (1 - \beta_n)^2 \sigma_\alpha^2 + T \sigma_\varepsilon^2) \frac{\sigma_y^2 (\beta_n - 1)^2}{1 - \beta_n^2} + \frac{(1 - \beta_n)^2 \sigma_\alpha^2 \sigma_\varepsilon^2 + \sigma_\varepsilon^4}{T} + \frac{2\sigma_\varepsilon^4}{T^2} \\ + (\beta_n - 1) \frac{\sigma_\varepsilon^4}{T^2} \sum_{r=1}^{s-2} \beta_n^{r-2} + \frac{(\beta_n - 1)^2}{T^2} (T^2 (1 - \beta_n)^2 \sigma_\alpha^2 \sigma_\varepsilon^2 + (T - 1) \sigma_\varepsilon^4) \sum_{r=1}^{s-2} \beta_n^{2r-2} \\ + (\beta_n - 1)^2 \frac{\sigma_\varepsilon^4}{T^2} \left(\sum_{t=1}^{k-1} \beta^{k-1-r} \right)^2 + (\beta_n - 1)^2 \frac{2\sigma_\varepsilon^4}{T^2} \sum_{r=1}^{s-2} \beta_n^{2r-2} = \frac{(T+2) \sigma_\varepsilon^4}{T^2} + O(n^{-1}). \end{aligned}$$

such that by a law of large numbers $n^{-1} \sum_{i=1}^n \bar{u}_i \Delta y_{ik-1} \xrightarrow{P} \sigma_\varepsilon^2 / T$ using the same arguments as before.

Next consider

$$\begin{aligned} E \Delta y_{ity} y_{i0} &= E y_{i0} \left((\beta_n - 1) \beta_n^{t-2} \eta_{i0} + \varepsilon_{is-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \right) \\ &= \beta_n^{t-2} \sigma_y^2 (\beta_n - 1) / (1 - \beta_n^2) = -\frac{\sigma_y^2}{2} + O(n^{-1/2}) \end{aligned}$$

and

$$\begin{aligned}
E(\Delta y_{it}y_{i0})^2 &= Ey_{i0}^2 \left((\beta_n - 1) \beta_n^{t-2} \eta_{i0} + \varepsilon_{is-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \right)^2 \\
&= \beta_n^{2(t-2)} \frac{(\beta_n - 1)^2 \sigma_y^2}{(1 - \beta_n^2)} \sigma_\alpha^2 + 3\beta_n^{2(t-2)} \frac{\sigma_y^4 (\beta_n - 1)^2}{(1 - \beta_n^2)^2} \\
&\quad + \left[\sigma_\varepsilon^2 + (\beta_n - 1)^2 \sigma_\varepsilon^2 \sum_{r=1}^{s-2} \beta_n^{2(r-1)} \right] (\sigma_\alpha^2 + \sigma_y^2 (1 - \beta_n^2)^{-1}) \\
&= \frac{\sigma_\varepsilon^2 \sigma_y^2}{2c} n + o(n).
\end{aligned}$$

such that $\text{Var}(n^{-1} \sum_{i=1}^n \Delta y_{it}y_{i0}) = O(1)$.

For $n^{-1} \sum_{i=1}^n g_{i,1}(\beta_0)$ consider $Eg_{i,1}(\beta_0) = 0$ which is implied by the orthogonality conditions and $E(u_{it}\Delta u_{is})^2 = 2((1 - \beta_n)^2 \sigma_\alpha^2 + \sigma_\varepsilon^2) \sigma_\varepsilon^2 = 2\sigma_\varepsilon^2 + o(n^{-1})$ by independence. For $E(\bar{u}_i \Delta u_{ik}) = T^{-1} \sum_{t=1}^T Eu_{it}(\varepsilon_{ik} - \varepsilon_{ik-1}) = 0$ while

$$E(\bar{u}_i \Delta u_{ik})^2 = T^{-2} E \left(\sum_{t=1}^T u_{it}(\varepsilon_{ik} - \varepsilon_{ik-1}) \right)^2 = 2(1 - \beta_n)^2 \sigma_\alpha^2 \sigma_\varepsilon^2 + T^{-1} \sigma_\varepsilon^4 + 2T^{-2} \sigma_\varepsilon^2$$

such that by the independence of $g_{i,1}(\beta_0)$ across i and a standard WLLN it follows that $n^{-1} \sum_{i=1}^n g_{i,1}(\beta_0) \xrightarrow{p} 0$. For $n^{-1} \sum_{i=1}^n g_{i,2}(\beta_0)$ we have from the moment conditions that $Eg_{i,2}(\beta_0) = 0$ and $\text{Var}(\Delta u_i(\beta_0)y_{i0}) = 2\sigma_\varepsilon^2(\sigma_\alpha^2 + \sigma_y^2/(1 - \beta_n^2)) = \frac{\sigma_\varepsilon^2 \sigma_y^2}{c} n + O(1)$.

The joint limiting distribution of $n^{-1} \sum_{i=1}^n [f'_{i,2} - Ef'_{i,2}, g_{i,2}(\beta_0)']'$ can now be obtained from a triangular array CLT. By previous arguments

$$E[f'_{i,2}, g_{i,2}(\beta_0)'] = \begin{bmatrix} \mu' & 0 & \cdots & 0 \end{bmatrix}$$

with $\mu = \mathbf{1}_{T-1} \sigma_y^2 / 2 + O(n^{-1})$ where $\mathbf{1}_{T-1}$ is the $T - 1$ dimensional vector with elements 1. Then $E[f'_{i,2} - Ef'_{i,2}, g_{i,2}(\beta_0)']' [f'_{i,2} - Ef'_{i,2}, g_{i,2}(\beta_0)'] = \Sigma_n$ where

$$\Sigma_n = \begin{bmatrix} \Sigma_{11,n} & \Sigma_{12,n} \\ \Sigma_{21,n} & \Sigma_{22,n} \end{bmatrix}$$

By previous calculations we have found the diagonal elements of $\Sigma_{11,n}$ and $\Sigma_{22,n}$ to be $\frac{\sigma_\varepsilon^2 \sigma_y^2}{2c} n$ and $\frac{\sigma_\varepsilon^2 \sigma_y^2}{c} n$. The off-diagonal elements are found to be

$$\begin{aligned}
E\Delta y_{it}\Delta y_{is}y_{i0}^2 &= E \left[y_{i0}^2 \left((\beta_n - 1) \beta_n^{t-2} \eta_{i0} + \varepsilon_{is-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \right) \right. \\
&\quad \times \left. \left((\beta_n - 1) \beta_n^{t-2} \eta_{i0} + \varepsilon_{it-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{it-1-r} \right) \right] \\
&= \beta_n^{t-2} \beta_n^{s-2} \frac{(\beta_n - 1)^2}{(1 - \beta_n^2)} (\sigma_\alpha^2 \sigma_y^2 + 3\sigma_y^4 (1 - \beta_n^2)^{-1}) + O(n^{-1}) = -\frac{3\sigma_y^4}{2} + O(1)
\end{aligned}$$

which is of lower order of magnitude while $n^{-1} (E\Delta y_{it}y_{i0})^2 = O(1)$. Thus $n^{-1} \Sigma_{11,n} \rightarrow \text{diag}(\frac{\sigma_\varepsilon^2 \sigma_\alpha^2}{2c}, \dots, \frac{\sigma_\varepsilon^2 \sigma_\alpha^2}{2c})$. The off-diagonal elements of $\Sigma_{22,n}$ are obtained from

$$E\Delta u_{it}\Delta u_{is}y_{i0}^2 = \begin{cases} \frac{-\sigma_\varepsilon^2 \sigma_y^2}{2c} n + O(1) & t = s + 1 \text{ or } t = s - 1 \\ 0 & \text{otherwise} \end{cases}$$

zero and for $\Sigma_{12,n}$ we consider

$$E\Delta y_{it}\Delta u_{is}y_{i0}^2 = \begin{cases} \frac{\sigma_e^2\sigma_u^2}{c}n + O(1) & \text{if } t = s \\ -\frac{\sigma_e^2\sigma_u^2}{c}n + O(1) & \text{if } t = s - 1 \\ 0 & \text{otherwise} \end{cases}$$

It then follows that for $\ell \in \mathbb{R}^{T(T+1)/+2T-6}$ such that $\ell'\ell = 1$ $n^{-1} \sum_{i=1}^n \ell' \Sigma_n^{-1/2} [f'_{i,2} - E f_{i,2}, g_{i,2}(\beta_0)']' \xrightarrow{d} N(0, 1)$ by the Lindeberg-Feller CLT for triangular arrays. It then follows from a straightforward application of the Cramer-Wold theorem and the continuous mapping theorem that $n^{-1} \sum_{i=1}^n [f'_{i,2}, g_{i,2}(\beta_0)']' \xrightarrow{d} [\xi'_x, \xi'_y]'$ where $[\xi'_x, \xi'_y]' \sim N((\mu', 0)', \Sigma)$. ■

Note on Near Unit Root Asymptotics in Dynamic Panel Models when Unity is Approached at $n^{-1/2}$: Supplementary Appendix for “Long Difference Instrumental Variables Estimation for Dynamic Panel Models with Fixed Effects”

Jinyong Hahn

Jerry Hausman

Guido Kuersteiner

June, 2002

We consider the dynamic panel model

$$\begin{aligned} y_{it} &= \alpha_i + \beta_n y_{it-1} + \varepsilon_{it} \\ \varepsilon_{it} &\sim N(0, \sigma_\varepsilon^2) \\ \alpha_i &\sim N(0, \sigma_\alpha^2) \\ y_{i0} &\sim N\left(\frac{\alpha_i}{1 - \beta_n}, \frac{\sigma_\varepsilon^2}{1 - \beta_n^2}\right) \end{aligned} \tag{1}$$

where we assume that $t = 1, \dots, T$ and $i = 1, \dots, n$ with T being fixed and $n \rightarrow \infty$. We consider a sequence of generating measures indexed by $\beta_n = \exp(-c/\sqrt{n})$ for some constant $c > 0$. Note that $\beta_n^k = 1 - \frac{k c}{\sqrt{n}} + o(n^{-1/2})$ for any constant k . We also define the innovation $u_{it} = \alpha_i + \varepsilon_{it}$. Let $\eta_{i0} = \alpha_i - (1 - \beta_n) y_{i0}$ such that

$$\begin{aligned} \Delta y_{it} &= \beta_n^{t-1} \alpha_i + (\beta_n - 1) \sum_{s=1}^{t-1} \beta_n^{s-1} \varepsilon_{it-s} + (\beta_n - 1) \beta_n^{t-1} y_{i0} + \varepsilon_{it} \\ &= (\beta_n - 1) \sum_{s=1}^{t-1} \beta_n^{s-1} \varepsilon_{it-s} + \beta_n^{t-1} \eta_{i0} + \varepsilon_{it}. \end{aligned}$$

We define $g_{i1}(\beta) = [u_{it} \Delta u_{is}(\beta), u_{iT} \Delta u_{ij}(\beta), \bar{u}_i \Delta u_{ik}(\beta)]'$ and $g_{i2}(\beta) = [\Delta u_i(\beta)' y_{i0}]'$ such that

$$g_n(\beta) = n^{-1} \sum_{i=1}^n [g_{i1}(\beta)', g_{i2}(\beta)']'$$

with the optimal weight matrix $\Omega = \lim_n E g_n(\beta_n) g_n(\beta_n)'$. The infeasible 2SLS of a possibly transformed set of moment conditions then solves

$$\beta_{2SLS} = \arg \min_{\beta} g_n(\beta)' C (C' \Omega C)^+ C' g_n(\beta)$$

where C is $n \times r$ matrix for $1 \leq r \leq G$ such that $C' C = I$ and $\text{rank}(C(C' \Omega C)^+ C') \geq 1$. We use Ω^+ to denote the Moore-Penrose inverse (see Magnus and Neudecker p. 32, 1988). We thus allow the use of a

singular weight matrix. Choosing r less than G allows to exclude certain moment conditions. We define the vectors

$$\begin{aligned} f_{i,1} &= [u_{it}\Delta y_{is-1}, u_{iT}\Delta y_{ij-1}, \bar{u}_i\Delta y_{ik-1}]' \\ f_{i,2} &= [\Delta y_{i1}y_{i0}, \dots, \Delta y_{iT-1}y_{i0}]' \end{aligned}$$

for $s = 2, \dots, T; t = 1, \dots, s-2; j = 2, \dots, T-1; k = 2, \dots, T$ and let $f_n = n^{-1} \sum_{i=1}^n [f'_{i,1}, f'_{i,2}]'$ such that the infeasible 2SLS estimator can be written as

$$\beta_{2SLS} - 1 = (f'_n C (C' \Omega C)^+ C' f_n)^{-1} f'_n C (C' \Omega C)^+ C' g_n(\beta_{n0}). \quad (2)$$

Lemma 1 Assume $\beta_n = \exp(-c/n)$ for some $c > 0$. For T fixed and as $n \rightarrow \infty$

$$n^{-1} \sum_{i=1}^n f_{i,1} \xrightarrow{p} \mu_1, n^{-1} \sum_{i=1}^n g_{i,1}(\beta_0) \xrightarrow{p} 0$$

with $\mu'_1 = [0, \dots, 0, \sigma_\varepsilon^2 T^{-1} \mathbf{1}'_{T-1}]$ and

$$n^{-1} \sum_{i=1}^n [f'_{i,2}, g'_{i,2}(\beta_0)]' \xrightarrow{d} [\xi'_x, \xi'_y]'$$

where $[\xi'_x, \xi'_y] \sim N(\mu_2, \Sigma)$ with $\Sigma = \begin{bmatrix} \Sigma_{11} & \Sigma_{12} \\ \Sigma_{21} & \Sigma_{22} \end{bmatrix}$ where $\mu'_2 = [-\mathbf{1}'_{T-1} \sigma_\varepsilon^2 / 2, 0, \dots, 0]$ and $\Sigma_{11} = \delta I, \Sigma_{12} = \delta M_1, \Sigma_{22} = \delta M_2$ where $\delta = \frac{\sigma_\alpha^2 \sigma_\varepsilon^2}{c}$,

$$M_1 = \begin{bmatrix} -1 & 1 & & 0 \\ & \ddots & \ddots & \\ & 0 & \ddots & 1 \\ & & & -1 \end{bmatrix}, M_2 = \begin{bmatrix} 2 & -1 & & 0 \\ -1 & \ddots & \ddots & \\ & \ddots & \ddots & -1 \\ & & -1 & 2 \end{bmatrix}$$

and $\Sigma_{12} = \Sigma_{21}$.

An immediate consequence of this result is that an estimator based solely on the condition

$$E \bar{u}_i \Delta u_{ik}(\beta_0) = 0 \quad (3)$$

is consistent. If we consider estimators that do use all the moment conditions except (3) then we are in a situation where again the moment conditions in $g_{i1}(\beta)$ become asymptotically redundant. Now, however the limiting distribution of the non-redundant conditions has a noncentrality parameter.

The limiting normal distribution of Lemma (1) is singular. An alternative representation of the limiting distribution can be given by eliminating redundant dimensions from $[\xi'_x, \xi'_y]'$. Let $\xi_y = [\xi'_{y0}, \xi'_{y1}]'$ where ξ_{y1} is the last element of ξ_y and $\xi_u = [\xi'_x, \xi'_{y1}]'$. Then $\xi_y = H \xi_z$ where H is a $T-1 \times T$ matrix defined as

$$H = \begin{bmatrix} -1 & 1 & 0 & 0 \\ \ddots & \ddots & & \vdots \\ 0 & -1 & 1 & 0 \\ 0 & \dots & 0 & 1 \end{bmatrix}.$$

It can be checked easily that the covariance matrix of vector $[\xi'_x, \xi'_u H']'$ is Σ as required. Using Lemma (1) the limiting distribution of $\beta_{2SLS} - \beta_n$ is stated in the next corollary. For this purpose we define the augmented vectors $\xi_x^\# = [0, \dots, 0, \xi'_x]'$ and $\xi_y^\# = [0, \dots, 0, \xi'_y]$ and partition $C = [C'_0, C'_1]'$ such that $C' \xi_x^\# = C'_1 \xi_x$. Let r_1 denote the rank of C_1 .

More explicitly, if β_{2SLS} is the GMM estimator based on $g_{i2}(\beta)$ then it has the following nonstandard limiting distribution under the weak identification asymptotics adopted here

$$\beta_{2SLS} - \beta_0 \xrightarrow{d} \frac{(\mu + \xi_x)' C_1 (C'_1 \Omega C_1)^{-1} C'_1 H \xi_u}{(\mu + \xi_x)' C_1 (C'_1 \Omega C_1)^{-1} C'_1 (\mu + \xi_x)} = X$$

where $\mu = -\mathbf{1}_{T-1} \sigma_\varepsilon^2 / 2$.

We report bias and MSE for the long difference (LD) and Arellano and Bond/Ahn and Schmidt estimators in Tables 1 and 2. As is immediately obvious from the tables bias and MSE are much lower than what we observe in actual Monte Carlo experiments.

Proof of Lemma (1). Consider $E f_{i,1}$ with

$$\begin{aligned} Eu_{it}\Delta y_{is-1} &= Eu_{it} \left[\beta_n^{s-2} \eta_{i0} + \varepsilon_{is-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \right] \\ &= (\beta_n - 1) \beta_n^{t-s-1} \sigma_\varepsilon^2 = O(n^{-1/2}) \end{aligned}$$

and $\text{Var}(u_{it}\Delta y_{is-1}) = Eu_{it}^2 (\Delta y_{is-1})^2 - (\beta_n - 1)^2 \beta_n^{2(s-t)} \sigma_\varepsilon^4$ where

$$\begin{aligned} Eu_{it}^2 (\Delta y_{is-1})^2 &= \beta_n^{2(s-t)} (\sigma_\varepsilon^2 + \sigma_\alpha^2) \frac{\sigma_\varepsilon^2 (\beta_n - 1)^2}{1 - \beta_n^2} + (\sigma_\varepsilon^2 + \sigma_\alpha^2) \sigma_\varepsilon^2 \\ &\quad + (\beta_n - 1)^2 (\sigma_\varepsilon^2 + \sigma_\alpha^2) \sigma_\varepsilon^2 \sum_{r=1}^{s-2} \beta_n^{2(r-1)} \end{aligned}$$

such that $\text{Var}(u_{it}\Delta y_{is-1}) = \sigma_\varepsilon^4 + O(n^{-1/2})$. By independence of $u_{it}\Delta y_{is-1}$ across i it follows by the Markov inequality that $P(|n^{-1}(\sum_{i=1}^n u_{it}\Delta y_{is-1} - Eu_{it}\Delta y_{is-1})| > \epsilon) \leq \frac{n^{-1}(\sigma_\varepsilon^2 + \sigma_\alpha^2)\sigma_\varepsilon^2 + o(n^{-1/2})}{\epsilon}$ for any $\epsilon > 0$ which shows that $n^{-1}\sum_{i=1}^n (u_{it}\Delta y_{is-1} - Eu_{it}\Delta y_{is-1}) = o_p(1)$. Since $n^{-1}\sum_{i=1}^n Eu_{it}\Delta y_{is-1} = O(n^{-1/2})$ it follows that $n^{-1}\sum_{i=1}^n u_{it}\Delta y_{is-1} = o_p(1)$. For $\bar{u}_i\Delta y_{is-1}$ note that

$$\frac{1}{T} E \left[\sum_{t=1}^T u_{it} \left(\beta_n^{s-2} \eta_{i0} + \varepsilon_{is-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \right) \right] = \frac{\sigma_\varepsilon^2}{T} + \frac{\sigma_\varepsilon^2 (\beta_n - 1)}{T} \sum_{t=1}^{s-1} \beta_n^{t-1}$$

and

$$\begin{aligned} E \left[T^{-1} \sum_{t=1}^T u_{it} \left(\beta_n^{s-2} \eta_{i0} + \varepsilon_{is-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \right) \right]^2 \\ = \beta_n^{2(s-2)} T^{-2} E \left(\sum_{t=1}^T u_{it} \right)^2 \eta_{i0}^2 + T^{-2} E \left(\sum_{t=1}^T u_{it} \right)^2 \varepsilon_{is-1}^2 \\ + 2(\beta_n - 1) T^{-2} E \left(\sum_{t=1}^T u_{it} \right)^2 \varepsilon_{is-1} \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \\ + \frac{(\beta_n - 1)^2}{T^2} E \sum_{t,s=1}^T u_{it} u_{is} \sum_{q,r=1}^{k-2} \beta_n^{r-1} \beta^{q-1} \varepsilon_{ik-1-q} \varepsilon_{ik-1-r} \\ = \beta_n^{2(s-2)} T^{-2} (T^2 \sigma_\alpha^2 + T \sigma_\varepsilon^2) \frac{\sigma_\varepsilon^2 (\beta_n - 1)^2}{1 - \beta_n^2} + \sigma_\alpha^2 \sigma_\varepsilon^2 + \frac{3\sigma_\varepsilon^4}{T} \\ + 4(\beta_n - 1) T^{-2} \sigma_\varepsilon^4 \sum_{r=1}^{s-2} \beta_n^{r-1} \\ + (\beta_n - 1)^2 \left(\sigma_\alpha^2 \sigma_\varepsilon^2 + \frac{3\sigma_\varepsilon^4}{T} \right) \sum_{r=1}^{s-2} \beta_n^{2r-4} + (\beta_n - 1)^2 \frac{\sigma_\varepsilon^4}{T^2} \left(\sum_{t=1}^{k-1} \beta^{k-1-r} \right)^2 \\ = \sigma_\alpha^2 \sigma_\varepsilon^2 + \frac{3\sigma_\varepsilon^4}{T} + O(n^{-1/2}). \end{aligned}$$

such that by a law of large numbers $n^{-1}\sum_{i=1}^n \bar{u}_i\Delta y_{ik-1} \xrightarrow{p} \sigma_\varepsilon^2/T$ using the same arguments as before.

Next consider

$$\begin{aligned} E \Delta y_{it} y_{i0} &= E y_{i0} \left(\beta_n^{t-2} \eta_{i0} + \varepsilon_{is-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \right) \\ &= \beta_n^{t-2} \sigma_\varepsilon^2 (\beta_n - 1) / (1 - \beta_n^2) = -\frac{\sigma_\varepsilon^2}{2} + O(n^{-1/2}) \end{aligned}$$

and

$$\begin{aligned}
E(\Delta y_{it}y_{i0})^2 &= E y_{i0}^2 \left(\beta_n^{t-2} \eta_{i0} + \varepsilon_{is-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \right)^2 \\
&= \beta_n^{2(t-2)} \frac{(\beta_n - 1)^2 \sigma_\varepsilon^2}{(1 - \beta_n^2)^2} \sigma_\alpha^2 + 3\beta_n^{2(t-2)} \frac{\sigma_y^4 (\beta_n - 1)^2}{(1 - \beta_n^2)^2} \\
&\quad + \left[\sigma_\varepsilon^2 + (\beta_n - 1)^2 \sigma_\varepsilon^2 \sum_{r=1}^{s-2} \beta_n^{2(r-1)} \right] (\sigma_\alpha^2 (1 - \beta_n)^{-2} + \sigma_\varepsilon^2 (1 - \beta_n^2)^{-1}) \\
&= \frac{\sigma_\varepsilon^2 \sigma_\alpha^2}{c} n + o(n).
\end{aligned}$$

such that $\text{Var}(n^{-1} \sum_{i=1}^n \Delta y_{it}y_{i0}) = O(1)$.

For $n^{-1} \sum_{i=1}^n g_{i,1}(\beta_0)$ consider $Eg_{i,1}(\beta_0) = 0$ which is implied by the orthogonality conditions and $E(u_{it}\Delta u_{is})^2 = 2(\sigma_\alpha^2 + \sigma_\varepsilon^2)\sigma_\varepsilon^2$ by independence. For $E(\bar{u}_i \Delta u_{ik}) = T^{-1} \sum_{t=1}^T Eu_{it}(\varepsilon_{ik} - \varepsilon_{ik-1}) = 0$ while

$$E(\bar{u}_i \Delta u_{ik})^2 = T^{-2} E \left(\sum_{t=1}^T u_{it}(\varepsilon_{ik} - \varepsilon_{ik-1}) \right)^2 = 2\sigma_\alpha^2 \sigma_\varepsilon^2 + T^{-1} \sigma_\varepsilon^4 + 2T^{-2} \sigma_\varepsilon^2$$

such that by the independence of $g_{i,1}(\beta_0)$ across i and a standard WLLN it follows that $n^{-1} \sum_{i=1}^n g_{i,1}(\beta_0) \xrightarrow{P} 0$. For $n^{-1} \sum_{i=1}^n g_{i,2}(\beta_0)$ we have from the moment conditions that $Eg_{i,2}(\beta_0) = 0$ and $\text{Var}(\Delta u_i(\beta_0)y_{i0}) = 2\sigma_\varepsilon^2(\sigma_\alpha^2/(1 - \beta_n)^2 + \sigma_\varepsilon^2/(1 - \beta_n^2)) = \frac{2\sigma_\varepsilon^2 \sigma_\alpha^2}{c} n + O(1)$.

The joint limiting distribution of $n^{-1} \sum_{i=1}^n [f'_{i,2} - Ef'_{i,2}, g_{i,2}(\beta_0)']'$ can now be obtained from a triangular array CLT. By previous arguments

$$E[f'_{i,2}, g_{i,2}(\beta_0)'] = \begin{bmatrix} \mu' & 0 & \cdots & 0 \end{bmatrix}$$

with $\mu = -\mathbf{1}_{T-1} \sigma_\varepsilon^2 / 2 + O(n^{-1})$ where $\mathbf{1}_{T-1}$ is the $T-1$ dimensional vector with elements 1. Then $E[f'_{i,2} - Ef'_{i,2}, g_{i,2}(\beta_0)']' [f'_{i,2} - Ef'_{i,2}, g_{i,2}(\beta_0)'] = \Sigma_n$ where

$$\Sigma_n = \begin{bmatrix} \Sigma_{11,n} & \Sigma_{12,n} \\ \Sigma_{21,n} & \Sigma_{22,n} \end{bmatrix}$$

By previous calculations we have found the diagonal elements of $\Sigma_{11,n}$ and $\Sigma_{22,n}$ to be $\frac{\sigma_\varepsilon^2 \sigma_\alpha^2}{c} n$. The off-diagonal elements are found to be

$$\begin{aligned}
E \Delta y_{it} \Delta y_{is} y_{i0}^2 &= E \left[y_{i0}^2 \left(\beta_n^{t-2} \eta_{i0} + \varepsilon_{is-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{is-1-r} \right) \right. \\
&\quad \times \left. \left(\beta_n^{t-2} \eta_{i0} + \varepsilon_{it-1} + (\beta_n - 1) \sum_{r=1}^{s-2} \beta_n^{r-1} \varepsilon_{it-1-r} \right) \right] \\
&= \beta_n^{t-2} \beta_n^{s-2} \frac{(\beta_n - 1)^2 \sigma_\varepsilon^2}{(1 - \beta_n^2)^2} \left(\frac{\sigma_\alpha^2}{(1 - \beta_n)^2} + 3\sigma_\varepsilon^2 (1 - \beta_n^2)^{-1} \right) + O(n^{-1}) = -\frac{3\sigma_\varepsilon^2 \sigma_\alpha^2}{2} n^{1/2} + O(1)
\end{aligned}$$

which is of lower order of magnitude while $n^{-1} (E \Delta y_{it} y_{i0})^2 = O(1)$. Thus $n^{-1} \Sigma_{11,n} \rightarrow \text{diag}(\frac{\sigma_\varepsilon^2 \sigma_\alpha^2}{c}, \dots, \frac{\sigma_\varepsilon^2 \sigma_\alpha^2}{c})$. The off-diagonal elements of $\Sigma_{22,n}$ are obtained from

$$E \Delta u_{it} \Delta u_{is} y_{i0}^2 = \begin{cases} \frac{-\sigma_\varepsilon^2 \sigma_\alpha^2}{c} n + O(1) & t = s+1 \text{ or } t = s-1 \\ 0 & \text{otherwise} \end{cases}$$

zero and for $\Sigma_{12,n}$ we consider

$$E\Delta y_{it}\Delta u_{is}y_{i0}^2 = \begin{cases} \frac{\sigma_e^2\sigma_\alpha^2}{c}n + O(1) & \text{if } t = s \\ -\frac{\sigma_e^2\sigma_\alpha^2}{c}n + O(1) & \text{if } t = s - 1 \\ 0 & \text{otherwise} \end{cases}$$

It then follows that for $\ell \in \mathbb{R}^{T(T+1)/+2T-6}$ such that $\ell'\ell = 1$ $n^{-1} \sum_{i=1}^n \ell' \Sigma_n^{-1/2} [f'_{i,2} - Ef_{i,2}, g_{i,2}(\beta_0)']' \xrightarrow{d} N(0, 1)$ by the Lindeberg-Feller CLT for triangular arrays. It then follows from a straightforward application of the Cramer-Wold theorem and the continuous mapping theorem that $n^{-1} \sum_{i=1}^n [f'_{i,2}, g_{i,2}(\beta_0)']' \xrightarrow{d} [\xi'_x, \xi'_y]'$ where $[\xi'_x, \xi'_y]' \sim N((\mu', 0)', \Sigma)$. ■

Note on Near Unit Root Asymptotics for the Blundell and Bond Estimator: Supplementary Appendix for “Long Difference Instrumental Variables Estimation for Dynamic Panel Models with Fixed Effects”

Jinyong Hahn

Jerry Hausman

Guido Kuersteiner

June, 2002

We consider the dynamic panel model

$$\begin{aligned}
 y_{it} &= \alpha_i + \beta_n y_{it-1} + \varepsilon_{it} \\
 \varepsilon_{it} &\sim N(0, \sigma_\varepsilon^2) \\
 \alpha_i &\sim N(0, \sigma_\alpha^2) \\
 y_{i0} &\sim N\left(\frac{\alpha_i}{1 - \beta_n}, \frac{\sigma_\varepsilon^2}{1 - \beta_n^2}\right)
 \end{aligned} \tag{1}$$

where we assume that $t = 1, \dots, T$ and $i = 1, \dots, n$ with T being fixed and $n \rightarrow \infty$. We consider a sequence of generating measures indexed by $\beta_n = \exp(-c/n)$ for some constant $c > 0$. Note that $\beta_n^k = 1 - \frac{kc}{\sqrt{n}} + o(n^{-1/2})$ for any constant k . We also define the innovation $u_{it} = \alpha_i + \varepsilon_{it}$. Let $\eta_{i0} = \alpha_i - (1 - \beta_n) y_{i0}$ such that

$$\begin{aligned}
 \Delta y_{it} &= \beta_n^{t-1} \alpha_i + (\beta_n - 1) \sum_{s=1}^{t-1} \beta_n^{s-1} \varepsilon_{it-s} + (\beta_n - 1) \beta_n^{t-1} y_{i0} + \varepsilon_{it} \\
 &= (\beta_n - 1) \sum_{s=1}^{t-1} \beta_n^{s-1} \varepsilon_{it-s} + \beta_n^{t-1} \eta_{i0} + \varepsilon_{it}.
 \end{aligned}$$

In particular it holds that

$$\Delta y_{i1} = \eta_{i0} + \varepsilon_{i1}.$$

In this note we are interested in the behavior of the additional moment condition (4.4) proposed by Blundell and Bond (1998). As Blundell and Bond point out this moment condition can be combined with the other moment conditions proposed by Ahn and Schmidt (1995) to construct a first order asymptotically efficient estimator. Here, we are however interested in the behavior of the Blundell and Bond estimator under weak instrument conditions and thus do not need to focus on the remaining conditions which do not produce consistent estimators.

We define

$$g_{i,AB} = [y_{i0} \Delta u_{i2}, y_{i0} \Delta u_{i3}, y_{i1} \Delta u_{i3}, y_{i0} \Delta u_{i4}, \dots, y_{i2} \Delta u_{i4}, \dots, y_{i0} \Delta u_{iT}, \dots, y_{iT-2} \Delta u_{iT}]'$$

and

$$g_{i,BB}(\beta) = [u_{i2}(\beta) \Delta y_{i1}, \dots, u_{iT}(\beta) \Delta y_{iT-1}]$$

We define

$$f_{i,BB}(\beta) = [y_{i1}(\beta) \Delta y_{i1}, \dots, y_{iT-1}(\beta) \Delta y_{iT-1}]'$$

Lemma 1 Assume $\beta_n = \exp(-c/n)$ for some $c > 0$. For T fixed and as $n \rightarrow \infty$

$$n^{-2} \sum_{i=1}^n f_{i,BB} \xrightarrow{p} \frac{\sigma_\varepsilon^2 + \sigma_\alpha^2}{c} \mathbf{1}_{T-1}, n^{-1} \sum_{i=1}^n g_{i,BB}(\beta_n) \xrightarrow{p} 0.$$

and

$$E[g_{i,AB}g'_{i,BB}] = O(1).$$

Define the Blundell and Bond (1998) estimator by letting $f_n = n^{-2} \sum_{i=1}^n [f'_{i,AB}, f'_{i,BB}]'$, $g_n = n^{-2} \sum_{i=1}^n [g'_{i,AB}, g'_{i,BB}]'$ and the weight matrix $\Omega_n = E[g_n g'_n]$ such that the infeasible 2SLS estimator can be written as

$$b_{BB} - 1 = (f'_n \Omega_n^+ f_n)^{-1} f'_n \Omega_n^+ g_n(\beta_n). \quad (2)$$

It follows from earlier results and the Lemma that for $q_3 = T(T+1)/2 - 2$

$$n\Omega_n \rightarrow \begin{bmatrix} 0_{q_3, q_3} & \cdots & 0_{q_3, T-1} \\ \vdots & \Sigma_{22} & \vdots \\ 0_{T-1, q_3} & \cdots & 0_{T-1, T-1} \end{bmatrix}$$

This suggests that the optimally weighted Blundell and Bond estimator becomes ill-defined under the weak instrument asymptotic approximation because $n^{-1} f'_n \Omega_n^+ f_n \xrightarrow{p} 0$. An inefficient version of the estimator is better behaved. Define

$$b_{IBB} - 1 = (f'_n f_n)^{-1} f'_n g_n(\beta_n).$$

Then it follows that

$$b_{IBB} - 1 \xrightarrow{p} 0$$

from Lemma (1) and results in the main part of the paper. In other words, exploiting stationarity leads to consistent estimators under weak instrument asymptotics. This result confirms the analysis in Blundell and Bond (1998).

Proof of Lemma (1). Note that

$$\begin{aligned} y_{it} &= \frac{(1 - \beta_n^t) \alpha_i}{(1 - \beta_n)} + \beta_n^t y_{i0} + \sum_{r=1}^{t-1} \beta_n^{r-1} \varepsilon_{it-r} + \varepsilon_{it} \\ &= \frac{\alpha_i}{(1 - \beta_n)} + \frac{\beta_n^t \eta_{i0}}{(1 - \beta_n)} + \varepsilon_{it} + \sum_{r=1}^{t-1} \beta_n^{r-1} \varepsilon_{it-r}. \end{aligned}$$

Consider $E f_{i,BB}$ with

$$\begin{aligned} E y_{it} \Delta y_{it} &= E y_{it} \left[\beta_n^t \eta_{i0} + \varepsilon_{it} + (\beta_n - 1) \sum_{r=1}^{t-1} \beta_n^{r-1} \varepsilon_{it-r} \right] \\ &= \frac{\sigma_\alpha^2}{(1 - \beta_n)} + \frac{\beta_n^{2t} \sigma_\varepsilon^2}{(1 - \beta_n)} + (\beta_n - 1) \sum_{r=1}^{t-1} \beta_n^{2(r-1)} \sigma_\varepsilon^2 = \frac{\sigma_\varepsilon^2 + \sigma_\alpha^2}{c} n + O(n^{-1}) \end{aligned}$$

and $\text{Var}(y_{it} \Delta y_{it}) = E(y_{it}^2) E(\Delta y_{is-1})^2 + (E(y_{it} \Delta y_{is-1}))^2$ where

$$\begin{aligned} E(y_{it}^2) E(\Delta y_{is-1})^2 &= \left(\frac{\sigma_\alpha^2}{(1 - \beta_n)} + \frac{\beta_n^{2t} \sigma_\varepsilon^2}{(1 - \beta_n)} + \sum_{r=0}^{t-1} \beta_n^{r-1} \sigma_\varepsilon^2 \right) \left(\frac{\beta_n^{2t} \sigma_\varepsilon^2}{(1 - \beta_n)} + \sigma_\varepsilon^2 + (\beta_n - 1)^2 \sum_{r=0}^{t-1} \beta_n^{2(r-1)} \sigma_\varepsilon^2 \right) \\ &= \frac{\sigma_\varepsilon^2 \sigma_\alpha^2}{c^2} n^2 + O(n). \end{aligned}$$

such that $\text{Var}(y_{it} \Delta y_{is-1}) = \frac{\sigma_\varepsilon^2 \sigma_\alpha^2 + (\sigma_\varepsilon^2 + \sigma_\alpha^2)^2}{c^2} n^2 + O(n)$. It then follows that $n^{-2} \sum_{i=1}^n E y_{it} \Delta y_{is-1} = O(1)$ and $n^{-2} \sum_{i=1}^n y_{it} \Delta y_{is-1} = \frac{\sigma_\varepsilon^2 + \sigma_\alpha^2}{c} + o_p(1)$.

For $g_{i,BB}(\beta)$ consider

$$E(u_{it} \Delta y_{it-1}) = E(\alpha_i + \varepsilon_{it}) \left[\beta_n^{t-1} \eta_{i0} + \varepsilon_{it-1} + (\beta_n - 1) \sum_{r=1}^{t-2} \beta_n^{r-1} \varepsilon_{it-1-r} \right] = 0$$

and

$$\begin{aligned} \text{Var}(u_{it} \Delta y_{it-1}) &= E(u_{it} \Delta y_{it-1})^2 = E u_{it}^2 E(\Delta y_{it-1})^2 \\ &= (\sigma_\alpha^2 + \sigma_\varepsilon^2) \left(\beta_n^{t-1} \sigma_\varepsilon^2 + \sigma_\varepsilon^2 + (\beta_n - 1)^2 \sum_{r=1}^{t-2} \beta_n^{2(r-1)} \sigma_\varepsilon^2 \right) \\ &= 2(\sigma_\alpha^2 + \sigma_\varepsilon^2) \sigma_\varepsilon^2 + o(1). \end{aligned}$$

such that

$$n^{-1} \sum_{i=1}^n g_{i,BB}(\beta) \xrightarrow{p} 0.$$

For the correlation between $g_{i,BB}$ and $g_{i,AB}$ consider

$$\begin{aligned} E[u_{it} \Delta y_{it-1} \Delta u_{is} y_{i0}] &= E[u_{it} \Delta u_{is}] E[\Delta y_{it-1} y_{i0}] + E[\Delta u_{is} \Delta y_{it-1}] E[y_{i0} u_{it}] \\ &= \begin{cases} (\beta_n - 1) (\beta_n^{t-1-s} - \beta_n^{t-s}) \sigma_\varepsilon^2 \frac{\sigma_\alpha^2}{1 - \beta_n} & t \geq s+1 \\ \sigma_\varepsilon^2 \beta_n^{t-1} \frac{\sigma_\varepsilon^2 (\beta_n - 1)}{1 - \beta_n^2} - \frac{(1 - \beta_n) \sigma_\varepsilon^2 \sigma_\alpha^2}{1 - \beta_n} & s = t = O(1) \\ -\sigma_\varepsilon^2 \beta_n^{t-1} \frac{\sigma_\varepsilon^2 (\beta_n - 1)}{1 - \beta_n^2} & t = s-1 \end{cases} \end{aligned}$$

and

$$E[u_{it} \Delta y_{it-1} \Delta u_{is} u_{ik}] = E[u_{it} \Delta u_{is}] E[\Delta y_{it-1} u_{ik}] + E[\Delta u_{is} \Delta y_{it-1}] E[u_{ik} u_{it}] = O(1)$$

■
