Handout
Introduction to Probability and Statistics[1]
Summer Course 2023

Ingmar R. Prucha

[1]The handout should be viewed as copy protected, and must not be used by other instructors for their lectures. The use of this handout is only permitted for those attending the summer course. The handout is work in progress, and contains all typed material presently available. Feedback is welcome.

Contents

Preface

I Probability **1**
- I.1 (R) Review of Set Theory . . . 1
- I.2 (R) Review of the Definition of a Function . . . 3
  - I.2.1 Definition of a Function . . . 3
  - I.2.2 Set Function . . . 4
- I.3 Random Experiment and Sample Space . . . 5
- I.4 Definition of Probability . . . 6
  - I.4.1 Classical Definition . . . 6
  - I.4.2 Relative Frequency Definition . . . 6
  - I.4.3 Axiomatic Definition . . . 6
  - I.4.4 Definition of Borel σ-Algebra * . . . 9

II Random Variables, Distribution Functions, and Expectations **11**
- II.1 Random Variables . . . 11
- II.2 Distribution Function . . . 14
- II.3 Probability Density Function . . . 17
- II.4 Mathematical Expectation . . . 19
- II.5 Mean, Variance and Other Characteristics . . . 25
- II.6 Chebyshev's Inequality . . . 27

III Conditional Probability and Stochastic Independence **28**
- III.1 Conditional Probability and Independence of Events . . . 28
  - III.1.1 Conditional Probability . . . 28
  - III.1.2 Bayes' Theorem . . . 29
  - III.1.3 Independence of Events . . . 29
- III.2 Marginal and Joint Distributions . . . 31
- III.3 Conditional Distributions and Expectations . . . 34
- III.4 Stochastic Independence of Random Variables . . . 37
- III.5 Covariance and Correlation Coefficient . . . 41

IV Some Special Distributions **42**
- IV.1 (R) Review of Combinatorial Analysis . . . 42
- IV.2 Discrete Distributions . . . 44
  - IV.2.1 Discrete Uniform Distribution . . . 44
  - IV.2.2 Bernoulli Distribution . . . 44
  - IV.2.3 Binomial Distribution . . . 45
  - IV.2.4 Hypergeometric Distribution . . . 45
  - IV.2.5 Poisson Distribution . . . 46
  - IV.2.6 Geometric Distribution . . . 47
  - IV.2.7 Negative Binomial Distribution . . . 47
- IV.3 Continuous Uniform Distribution . . . 49

IV.3.1 Continuous Uniform Distribution on an Interval of the Real Line . . . 49
IV.3.2 Continuous Uniform Distribution on an Interval of the Real Plane . . . 49
IV.4 Gamma and Chi-Square Distribution . . . 51
IV.4.1 Gamma Distribution . . . 51
IV.4.2 Exponential Distribution . . . 52
IV.4.3 Chi-Square Distribution . . . 52
IV.5 Normal Distribution . . . 53

V Distribution of Functions of Random Variables **54**
V.1 Introduction to Sampling Theory . . . 54
V.2 Cumulative Distribution Function Technique . . . 56
V.3 Transformation Technique . . . 57
V.3.1 Discrete Random Variables . . . 57
V.3.2 Continuous Random Variables . . . 58
V.4 Student-t and F Distribution . . . 60
V.4.1 Student-t Distribution . . . 60
V.4.2 F Distribution . . . 60
V.5 Moment Generating Function Technique . . . 62
V.6 Multivariate Normal Distribution . . . 64
V.6.1 Definition and Moment Generating Function . . . 64
V.6.2 Marginal Distribution and Conditional Distribution, Linear Combinations and Quadratic Forms . . . 66
V.7 Distribution of $\overline{X}$ and nS^2/σ^2 . . . 72

VI Estimation **75**
VI.1 Point Estimation . . . 75
VI.1.1 Maximum Likelihood Estimation . . . 76
VI.1.2 Method of Moments Estimation . . . 77
VI.1.3 Unbiasedness and Consistency of Estimators . . . 78
VI.1.4 Efficiency of Estimators . . . 79
VI.2 Confidence Intervals for Means . . . 80

VII Statistical Hypothesis **81**
VII.1 Examples and Definitions . . . 81
VII.2 Most Powerful Tests . . . 83
VII.3 Uniformly Most Powerful Tests . . . 84
VII.4 General Likelihood Ratio Test . . . 84

VIII Sufficient Statistics **85**
VIII.1 Sufficient Statistic for a Parameter . . . 85
VIII.2 Rao Blackwell Theorem . . . 85

A Greek and Script Alphabet **86**

B Appendix to Section I **88**
B.1 Advanced and Supplementary Material to Section I.4 88

C Appendix to Section II **91**
C.1 Advanced and Supplementary Material to Section II.2 91
C.2 Advanced and Supplementary Material to Section II.4 92

D Appendix to Section III **99**
D.1 Advanced and Supplementary Material to Section III.3 99

E References **108**
E.1 Principal Texts 108
E.2 Supplementary Text 108
E.3 Asymptotic Distribution Theory 108
E.4 Additional Advanced Texts 108
